true

Suppress Health Test: Ozone SCM Safemode Canary

Description

Whether to suppress the results of the Ozone SCM Safemode Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_scm_safemode_canary

Required

true

Suppress Health Test: Ozone SCM Upgrade Need Finalization Canary

Description

Whether to suppress the results of the Ozone SCM Upgrade Need Finalization Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_scm_upgrade_need_finalization_canary

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_storage_container_manager_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_storage_container_manager_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_storage_container_manager_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_storage_container_manager_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_storage_container_manager_otelcol_health

Phoenix Properties in Cloudera Runtime 7.3.1

Role groups:

Query Server

Advanced

Query Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions

and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml**Description**

For advanced use only. A string to be inserted into phoenix-site.xml for this role only.

Related Name**Default Value****API Name**

phoenix-site.xml_role_safety_valve

Required

false

Query Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

PHOENIX_QUERY_SERVER_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Query Server Log Directory****Description**

The log directory for log files of the role Query Server.

Related Name

log_dir

Default Value

/var/log/phoenix

API Name

log_dir

Required

false

Query Server Logging Threshold**Description**

The minimum log level for Query Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Query Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Query Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Query Server Max Log Size

Description

The maximum size, in megabytes, per log file for Query Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

phoenix_query_server_fd_thresholds

Required

false

Query Server Host Health Test

Description

When computing the overall Query Server health, consider the host's health.

Related Name

Default Value

true

API Name

phoenix_query_server_host_health_enabled

Required

false

Query Server Process Health Test

Description

Enables the health test that the Query Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

phoenix_query_server_scm_health_enabled

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Enable Remote User Extractor****Description**

Boolean which controls if a remote user to impersonate should be extracted from the HTTP request parameter made by that user instead of the HTTP-authenticated user name (which is the default). Required for accessing Phoenix Query Server via Knox.

Related Name

phoenix_queryserver.withRemoteUserExtractor

Default Value

true

API Name

phoenix_query_server_with_remote_user_extractor

Required

false

Additional Phoenix Query Server Options**Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

Related Name

phoenix_queryserver_java_opts

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Phoenix Query Server Port

Description

The port Phoenix Query Server will listen on

Related Name

phoenix.queryserver.http.port

Default Value

8765

API Name

phoenix_query_server_port

Required

false

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

Security**Query Server TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Query Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

phoenix.queryserver.tls.truststore

Default Value**API Name**

ssl_client_truststore_location

Required

false

Query Server TLS/SSL Trust Store Password

Description

The password for the Query Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

phoenix.queryserver.tls.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Query Server

Description

Encrypt communication between clients and Query Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

phoenix.queryserver.tls.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Query Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Query Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

phoenix.queryserver.tls.keystore

Default Value**API Name**

ssl_server_keystore_location

Required

false

Query Server TLS/SSL Server Keystore File Password

Description

The password for the Query Server keystore file.

Related Name

phoenix.queryserver.tls.keystore.password

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

Healthy Query Server Monitoring Thresholds

Description

The health test thresholds of the overall Query Server health. The check returns "Concerning" health if the percentage of "Healthy" Query Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Query Servers falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 90.0 %

API Name

PHOENIX_PHOENIX_QUERY_SERVER_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Profiler Manager Properties in Cloudera Runtime 7.3.1

Role groups:

Data Discovery Service Agent

Advanced

Data Discovery Service Agent Advanced Configuration Snippet (Safety Valve) for data-discovery-service-conf/application.conf

Description

For advanced use only. A string to be inserted into data-discovery-service-conf/application.conf for this role only.

Related Name**Default Value****API Name**

data-discovery-service-conf/application.conf_role_safety_valve

Required

false

Data Discovery Service Agent Advanced Configuration Snippet (Safety Valve) for data-discovery-service-conf/dpprofiler.properties**Description**

For advanced use only. A string to be inserted into data-discovery-service-conf/dpprofiler.properties for this role only.

Related Name**Default Value****API Name**

data-discovery-service-conf/dpprofiler.properties_role_safety_valve

Required

false

Data Discovery Service Agent Advanced Configuration Snippet (Safety Valve) for data-discovery-service-conf/flyway.conf**Description**

For advanced use only. A string to be inserted into data-discovery-service-conf/flyway.conf for this role only.

Related Name**Default Value****API Name**

data-discovery-service-conf/flyway.conf_role_safety_valve

Required

false

Data Discovery Service Agent Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

DATA_DISCOVERY_SERVICE_AGENT_role_env_safety_valve

Required

false

Data Discovery Service Agent XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for Data Discovery Service Agent, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value**API Name**

logback_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Data Discovery Service Agent Log Directory

Description

The log directory for log files of the role Data Discovery Service Agent.

Related Name

log_dir

Default Value

/var/log/data-discovery-service

API Name

log_dir

Required

false

Data Discovery Service Agent Logging Threshold

Description

The minimum log level for Data Discovery Service Agent logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Data Discovery Service Agent Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Data Discovery Service Agent logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Data Discovery Service Agent Max Log Size**Description**

The maximum size, in megabytes, per log file for Data Discovery Service Agent logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

data_discovery_service_agent_fd_thresholds

Required

false

Data Discovery Service Agent Host Health Test

Description

When computing the overall Data Discovery Service Agent health, consider the host's health.

Related Name

Default Value

true

API Name

data_discovery_service_agent_host_health_enabled

Required

false

Data Discovery Service Agent Process Health Test

Description

Enables the health test that the Data Discovery Service Agent's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

data_discovery_service_agent_scm_health_enabled

Required

false

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name

Default Value

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name

Default Value

API Name

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing

memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Enable TLS/SSL for Data Discovery Service Agent****Description**

Encrypt communication between clients and Data Discovery Service Agent using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Data Discovery Service Agent TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Data Discovery Service Agent is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Data Discovery Service Agent TLS/SSL Server Keystore File Password

Description

The password for the Data Discovery Service Agent keystore file.

Related Name

ssl.keystore.password.generator

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Data Discovery Service Agent Advanced Configuration Snippet (Safety Valve) for data-discovery-service-conf/application.conf

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Data Discovery Service Agent Advanced Configuration Snippet (Safety Valve) for data-discovery-service-conf/application.conf parameter.

Related Name

Default Value

false

API Name

role_config_suppression_data-discovery-service-conf/application.conf_role_safety_valve

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

50

API Name

client_config_priority

Required

true

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_client_config_root_dir`**Required**`true`

Profiler Admin Agent

Advanced

Profiler Admin Agent XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for Profiler Admin Agent, ignoring all logging configuration.

Related Name`logback_safety_valve`**Default Value****API Name**`logback_safety_valve`**Required**`false`

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**`false`**API Name**`metric_config_auto_refresh`**Required**`false`

Heap Dump Directory

Description

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name`oom_heap_dump_dir`**Default Value**`/tmp`**API Name**`oom_heap_dump_dir`

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Profiler Admin Agent Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

PROFILER_ADMIN_AGENT_role_env_safety_valve

Required

false

Profiler Admin Agent Advanced Configuration Snippet (Safety Valve) for profileradmin-conf/application.conf

Description

For advanced use only. A string to be inserted into profileradmin-conf/application.conf for this role only.

Related Name

Default Value

API Name

profileradmin-conf/application.conf_role_safety_valve

Required

false

Profiler Admin Agent Advanced Configuration Snippet (Safety Valve) for profileradmin-conf/dpprofiler.properties

Description

For advanced use only. A string to be inserted into profileradmin-conf/dpprofiler.properties for this role only.

Related Name

Default Value

API Name

profileradmin-conf/dpprofiler.properties_role_safety_valve

Required

false

Profiler Admin Agent Advanced Configuration Snippet (Safety Valve) for profileradmin-conf/flyway.conf

Description

For advanced use only. A string to be inserted into profileradmin-conf/flyway.conf for this role only.

Related Name

Default Value

API Name

profileradmin-conf/flyway.conf_role_safety_valve

Required

false

Logs

Profiler Admin Agent Log Directory

Description

The log directory for log files of the role Profiler Admin Agent.

Related Name

log_dir

Default Value

/var/log/profileradmin

API Name

log_dir

Required

false

Profiler Admin Agent Logging Threshold

Description

The minimum log level for Profiler Admin Agent logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Profiler Admin Agent Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Profiler Admin Agent logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Profiler Admin Agent Max Log Size

Description

The maximum size, in megabytes, per log file for Profiler Admin Agent logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**`monitoring_metric_filter`**Required**`false`**OpenTelemetry Collector Exporters Section****Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name`otelcol_exporters`**Required**`false`**OpenTelemetry Collector Extensions Section****Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name`otelcol_extensions`**Required**`false`**OpenTelemetry Collector Helper Port****Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value****API Name**`otelcol_helper_port`**Required**

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password

Description

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify \$INFRA(cdp_request_signer_password) when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_url)` expression. Specify `$INFRA(cdp_request_signer_url)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

`$INFRA(cdp_request_signer_url)`

API Name

`otelcol_remote_write_url`

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_user)` expression. Specify `$INFRA(cdp_request_signer_username)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

`$INFRA(cdp_request_signer_username)`

API Name

`otelcol_remote_write_user`

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

`otelcol_rtm_logs_exporters`

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_extensions

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_service

Required

false

OpenTelemetry Collector Service Section

Description

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

profiler_admin_agent_fd_thresholds

Required

false

Profiler Admin Agent Host Health Test**Description**

When computing the overall Profiler Admin Agent health, consider the host's health.

Related Name

Default Value

true

API Name

profiler_admin_agent_host_health_enabled

Required

false

Profiler Admin Agent Process Health Test**Description**

Enables the health test that the Profiler Admin Agent's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

profiler_admin_agent_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other

File System URI

Description

File System URI.

Related Name

`file_system_uri`

Default Value

`hdfs:///user/dpprofiler`

API Name

`file_system_uri`

Required

true

Profiler Admin Database Host

Description

Hostname of the database used by Profiler Admin. If the port is non-default for your database type, use `host:port` notation.

Related Name

`profiler_admin_database_host`

Default Value**API Name**

profiler_admin_database_host

Required

true

Profiler Admin Database JDBC URL Override

Description

Custom JDBC URL to use when connecting to the Profiler Admin Database. This connection string will override all other values used to construct the JDBC URL.

Related Name

profiler_admin_database_jdbc_url_override

Default Value

API Name

profiler_admin_database_jdbc_url_override

Required

false

Profiler Admin Database Name

Description

Name of Profiler Admin database.

Profiler Admin DB Cleanup Cron

Description

Profiler Admin DB Cleanup Cron.

Related Name

profiler_admin_db_cleanup_cron

Default Value

00 00 0/12 * * ?

API Name

profiler_admin_db_cleanup_cron

Required

false

Profiler Admin DB Cleanup Days Offset

Description

Profiler Admin DB Cleanup Days Offset.

Related Name

profiler_admin_db_cleanup_days_offset

Default Value

3

API Name

profiler_admin_db_cleanup_days_offset

Required

false

Profiler Admin DB Sever Root Certificate Path

Description

DB Server Root Certificate Path for Profiler Admin

Related Name

profiler_admin_db_server_root_cert_path

Default Value

API Name

profiler_admin_db_server_root_cert_path

Required

false

Enable SSL for Profiler Admin Database

Description

Enable SSL for Profiler Admin Database connectivity.

Related Name

profiler_admin_db_ssl_enabled

Default Value

false

API Name

profiler_admin_db_ssl_enabled

Required

true

Profiler Admin Kerberos Ticket Refresh Cron

Description

Profiler kerberos ticket refresh cron.

Related Name

profiler_admin_kerberos_ticket_refresh_cron

Default Value

00 00 0/6 * * ?

API Name

profiler_admin_kerberos_ticket_refresh_cron

Required

false

Profiler Admin Kerberos Ticket Refresh Retry Allowed

Description

Profiler admin kerberos ticket refresh retry allowed.

Related Name

profiler_admin_kerberos_ticket_refresh_retry_allowed

Default Value

5

API Name

profiler_admin_kerberos_ticket_refresh_retry_allowed

Required

false

Profiler Admin Max Heapsize

Description

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

profiler_admin_max_heap_size

Default Value

2 GiB

API Name

profiler_admin_max_heap_size

Required

true

Profiler Admin PID Directory Path

Description

Profiler Admin pid directory path.

Related Name

profiler_admin_pid_directory_path

Default Value

/var/run/profileradmin

API Name

profiler_admin_pid_directory_path

Required

false

Profiler Admin SSO Knox Enabled

Description

Enable Knox SSO.

Related Name

profiler_admin_sso_knox_enabled

Default Value

false

API Name

profiler_admin_sso_knox_enabled

Required

false

Profiler Admin SSO Knox Public Key

Description

Knox SSO public key.

Related Name

profiler_admin_sso_knox_public_key

Default Value**API Name**

profiler_admin_sso_knox_public_key

Required

false

Profiler Admin Zookeeper Base Path**Description**

Profiler Admin zookeeper base path.

Related Name

profiler_admin_zookeeper_base_path

Default Value

/profiler-admin/stores

API Name

profiler_admin_zookeeper_base_path

Required

false

Profilers CSP Path**Description**

Location where sensitivity dsls are stored

Related Name

profiler_csp_dir_path

Default Value

/apps/dpprofiler/csp

API Name

profiler_csp_dir_path

Required

false

Scheduler CRON check enabled**Description**

Scheduler CRON check enabled flag

Related Name

scheduler_config_cron_frequency_check_enabled

Default Value

false

API Name

scheduler_config_cron_frequency_check_enabled

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value**API Name**

rlimit_fds

Required

false

Ports and Addresses**Profiler Admin Service Port****Description**

Port for Profiler Admin Service.

Related Name

profiler_admin_service_port

Default Value

21700

API Name

profiler_admin_service_port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024	
API Name	rm_cpu_shares
Required	true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

	-1 MiB
API Name	rm_memory_soft_limit_v1
Required	true

Cgroup V2 Memory Soft Limit

Description	Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.
Related Name	memory.high
Default Value	-1 MiB
API Name	rm_memory_soft_limit_v2
Required	true

Security

Profiler Admin Agent TLS/SSL Trust Store File

Description	The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Profiler Admin Agent might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.
Related Name	ssl.truststore.location
Default Value	
API Name	ssl_client_truststore_location
Required	false

Profiler Admin Agent TLS/SSL Trust Store Password

Description	The password for the Profiler Admin Agent TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.
Related Name	ssl.truststore.password.generator

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Profiler Admin Agent**Description**

Encrypt communication between clients and Profiler Admin Agent using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Profiler Admin Agent TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Profiler Admin Agent is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Profiler Admin Agent TLS/SSL Server Keystore File Password**Description**

The password for the Profiler Admin Agent keystore file.

Related Name

ssl.keystore.password.generator

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Profiler Admin Agent TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Admin Agent TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Profiler Admin Agent TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Admin Agent TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Profiler Admin Agent TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Admin Agent TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Profiler Admin Agent TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Admin Agent TLS/SSL Server Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_manager_profiler_admin_agent_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_profiler_manager_profiler_admin_agent_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_manager_profiler_admin_agent_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_manager_profiler_admin_agent_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_manager_profiler_admin_agent_otelcol_health

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_manager_profiler_admin_agent_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_manager_profiler_admin_agent_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_manager_profiler_admin_agent_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_profiler_manager_profiler_admin_agent_unexpected_exits

Required

true

Profiler Metrics Agent

Advanced

Profiler Metrics Agent XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for Profiler Metrics Agent, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value**API Name**

logback_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Profiler Metrics Agent Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

PROFILER_METRICS_AGENT_role_env_safety_valve

Required

false

Profiler Metrics Agent Advanced Configuration Snippet (Safety Valve) for profilermetrics-conf/application.conf

Description

For advanced use only. A string to be inserted into profilermetrics-conf/application.conf for this role only.

Related Name

Default Value

API Name

profilermetrics-conf/application.conf_role_safety_valve

Required

false

Profiler Metrics Agent Advanced Configuration Snippet (Safety Valve) for profilermetrics-conf/dpprofiler.properties

Description

For advanced use only. A string to be inserted into profilermetrics-conf/dpprofiler.properties for this role only.

Related Name

Default Value

API Name

profilermetrics-conf/dpprofiler.properties_role_safety_valve

Required

false

Profiler Metrics Agent Advanced Configuration Snippet (Safety Valve) for profilermetrics-conf/flyway.conf

Description

For advanced use only. A string to be inserted into profilermetrics-conf/flyway.conf for this role only.

Related Name

Default Value

API Name

profilermetrics-conf/flyway.conf_role_safety_valve

Required

false

Logs

Profiler Metrics Agent Log Directory

Description

The log directory for log files of the role Profiler Metrics Agent.

Related Name

	log_dir
Default Value	/var/log/profilermetrics
API Name	log_dir
Required	false

Profiler Metrics Agent Logging Threshold

Description	The minimum log level for Profiler Metrics Agent logs
Related Name	
Default Value	INFO
API Name	log_threshold
Required	false

Profiler Metrics Agent Maximum Log File Backups

Description	The maximum number of rolled log files to keep for Profiler Metrics Agent logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

Profiler Metrics Agent Max Log Size

Description	The maximum size, in megabytes, per log file for Profiler Metrics Agent logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	max_log_size
Required	false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.

- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

`otelcol_extensions`

Required

`false`

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name

Default Value

API Name

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

profiler_metrics_agent_fd_thresholds

Required

false

Profiler Metrics Agent Host Health Test**Description**

When computing the overall Profiler Metrics Agent health, consider the host's health.

Related Name**Default Value**

true

API Name

profiler_metrics_agent_host_health_enabled

Required

false

Profiler Metrics Agent Process Health Test**Description**

Enables the health test that the Profiler Metrics Agent's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

profiler_metrics_agent_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

`profiler_admin_url`**Default Value**`$profiler_admin_url`**API Name**`profiler_admin_url`**Required**`true`**Profiler Metrics Database Host****Description**

Hostname of the database used by Profiler Metrics. If the port is non-default for your database type, use host:port notation.

Related Name`profiler_metrics_database_host`**Default Value****API Name**`profiler_metrics_database_host`**Required**`true`**Profiler Metrics Database JDBC URL Override****Description**

Custom JDBC URL to use when connecting to the Profiler Metrics Database. This connection string will override all other values used to construct the JDBC URL.

Related Name`profiler_metrics_database_jdbc_url_override`**Default Value****API Name**`profiler_metrics_database_jdbc_url_override`**Required**`false`**Profiler Metrics Database Name****Description**

Name of Profiler Metrics database.

Related Name`profiler_metrics_database_name`**Default Value**`profiler_metric`**API Name**`profiler_metrics_database_name`**Required**`true`

Profiler Metrics Database User Password

Description

Password for Profiler Metrics database.

Related Name

dpprofiler.db.password

Default Value**API Name**

profiler_metrics_database_password

Required

true

Profiler Metrics Database Type

Description

Database type to be used (Postgres). Postgres version should be * = 9.4.

Related Name

profiler_metrics_database_type

Default Value

POSTGRES

API Name

profiler_metrics_database_type

Required

true

Profiler Metrics Database User

Description

User for Profiler Metrics database.

Related Name

profiler_metrics_database_user

Default Value

profiler_metric

API Name

profiler_metrics_database_user

Required

true

Profiler Metrics DB Server Root Certificate Path

Description

DB Server Root Certificate Path for Profiler Metrics

Related Name

profiler_metrics_db_server_root_cert_path

Default Value**API Name**

profiler_metrics_db_server_root_cert_path

Required

false

Enable SSL for Profiler Metrics Database

Description

Enable SSL for Profiler Metrics Database connectivity.

Related Name

profiler_metrics_db_ssl_enabled

Default Value

false

API Name

profiler_metrics_db_ssl_enabled

Required

true

Profiler Metrics Kerberos Ticket Refresh Cron

Description

Profiler kerberos ticket refresh cron.

Related Name

profiler_metrics_kerberos_ticket_refresh_cron

Default Value

00 00 0/6 * * ?

API Name

profiler_metrics_kerberos_ticket_refresh_cron

Required

false

Profiler Metrics Kerberos Ticket Refresh Retry Allowed

Description

Profiler metrics kerberos ticket refresh retry allowed.

Related Name

profiler_metrics_kerberos_ticket_refresh_retry_allowed

Default Value

5

API Name

profiler_metrics_kerberos_ticket_refresh_retry_allowed

Required

false

Profiler Metrics Max Heapsize

Description

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

profiler_metrics_max_heap_size

Default Value

2 GiB

API Name

profiler_metrics_max_heap_size

Required

true

Profiler Metrics PID Directory Path

Description

Profiler Metrics pid directory path.

Related Name

profiler_metrics_pid_directory_path

Default Value

/var/run/profilermetrics

API Name

profiler_metrics_pid_directory_path

Required

false

Profiler Metrics SSO Knox Enabled

Description

Enable Knox SSO.

Related Name

profiler_metrics_sso_knox_enabled

Default Value

false

API Name

profiler_metrics_sso_knox_enabled

Required

false

Profiler Metrics SSO Knox Public Key

Description

Knox SSO public key.

Related Name

profiler_metrics_sso_knox_public_key

Default Value

API Name

profiler_metrics_sso_knox_public_key

Required

false

Profiler Metrics Zookeeper Base Path

Description

Profiler Metrics zookeeper base path.

Related Name

profiler_metrics_zookeeper_base_path

Default Value

/profileragent/stores

API Name

profiler_metrics_zookeeper_base_path

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Profiler Metrics Service Port****Description**

Port for Profiler Metrics Service.

Related Name

profiler_metrics_service_port

Default Value

21800

API Name

profiler_metrics_service_port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

`rm_custom_resources`**Required**`false`**Cgroup V2 I/O Weight****Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name`io.weight`**Default Value**`100`**API Name**`rm_io_weight`**Required**`true`**Cgroup V1 Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit_v1`**Required**`true`**Cgroup V2 Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.max`**Default Value**`-1 MiB`

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Profiler Metrics Agent TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Profiler Metrics Agent might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Profiler Metrics Agent TLS/SSL Trust Store Password

Description

The password for the Profiler Metrics Agent TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Profiler Metrics Agent

Description

Encrypt communication between clients and Profiler Metrics Agent using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Profiler Metrics Agent TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Profiler Metrics Agent is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Profiler Metrics Agent TLS/SSL Server Keystore File Password

Description

The password for the Profiler Metrics Agent keystore file.

Related Name

ssl.keystore.password.generator

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

`role_config_suppression_cdh_version_validator`**Required**`true`**Suppress Parameter Validation: File System URI****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the File System URI parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_file_system_uri`**Required**`true`**Suppress Parameter Validation: JMX Exporter configuration YAML****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_jmx_exporter_yaml`**Required**`true`**Suppress Parameter Validation: Profiler Metrics Agent Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Metrics Agent Log Directory parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_log_dir`**Required**`true`**Suppress Parameter Validation: Profiler Metrics Agent XML Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Metrics Agent XML Override parameter.

Related Name

Default Value

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Profiler Scheduler Properties in Cloudera Runtime 7.3.1

Role groups:

Profiler Scheduler Agent

Advanced

Profiler Scheduler Agent XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for Profiler Scheduler Agent, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value

API Name

logback_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Profiler Scheduler Agent Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

PROFILER_SCHEDULER_AGENT_role_env_safety_valve

Required

false

Profiler Scheduler Agent Advanced Configuration Snippet (Safety Valve) for profilerscheduler-conf/application.conf

Description

For advanced use only. A string to be inserted into profilerscheduler-conf/application.conf for this role only.

Related Name

Default Value

API Name

profilerscheduler-conf/application.conf_role_safety_valve

Required

false

Profiler Scheduler Agent Advanced Configuration Snippet (Safety Valve) for profilerscheduler-conf/dpprofiler.properties

Description

For advanced use only. A string to be inserted into profilerscheduler-conf/dpprofiler.properties for this role only.

Related Name

Default Value

API Name

profilerscheduler-conf/dpprofiler.properties_role_safety_valve

Required

false

Logs

Profiler Scheduler Agent Log Directory

Description

The log directory for log files of the role Profiler Scheduler Agent.

Related Name

log_dir

Default Value

/var/log/profilerscheduler

API Name

log_dir

Required

false

Profiler Scheduler Agent Logging Threshold

Description

The minimum log level for Profiler Scheduler Agent logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Profiler Scheduler Agent Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Profiler Scheduler Agent logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Profiler Scheduler Agent Max Log Size

Description

The maximum size, in megabytes, per log file for Profiler Scheduler Agent logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name

Default Value

API Name

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

otelcol_extensions

Required

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value****API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: `$HOST_NAME`, `$CLUSTER_NAME`, `$CLUSTER_ID`, `$SERVICE_TYPE`, `$SERVICE_NAME`, `$ROLE_NAME`, `$ROLE_TYPE`, `$ROLE_PARAM(my_parameter_name)` - e.g.: a port parameter for the role's metrics, `$DECODE_B64(...)` and `$DECODE_URL(...)` to decode encoded parameters, `$ENV_PARAM(name)` to fetch params from the process' environment, `$SYS_PARAM(name)` to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_password)` expression. Specify `$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_url)` expression. Specify `$INFRA(cdp_request_signer_url)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

`$INFRA(cdp_request_signer_url)`

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_user)` expression. Specify `$INFRA(cdp_request_signer_username)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

`$INFRA(cdp_request_signer_username)`

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

profiler_scheduler_agent_fd_thresholds

Required

false

Profiler Scheduler Agent Host Health Test**Description**

When computing the overall Profiler Scheduler Agent health, consider the host's health.

Related Name**Default Value**

true

API Name

profiler_scheduler_agent_host_health_enabled

Required

false

Profiler Scheduler Agent Process Health Test**Description**

Enables the health test that the Profiler Scheduler Agent's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

profiler_scheduler_agent_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

Default Value

21900

API Name

profiler_scheduler_service_port

Required

false

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

Required

true

Security

Profiler Scheduler Agent TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Profiler Scheduler Agent might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Profiler Scheduler Agent TLS/SSL Trust Store Password

Description

The password for the Profiler Scheduler Agent TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Profiler Scheduler Agent

Description

Encrypt communication between clients and Profiler Scheduler Agent using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Profiler Scheduler Agent TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Profiler Scheduler Agent is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

Suppress Parameter Validation: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Service Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Parameter Validation: Profiler Scheduler Agent Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Agent Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

	false
API Name	role_config_suppression_profiler_scheduler_agent_role_env_safety_valve
Required	true

Suppress Parameter Validation: Profiler Scheduler extra jars

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler extra jars parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_profiler_scheduler_extra_jars
Required	true

Suppress Parameter Validation: Profiler Scheduler Kerberos Ticket Refresh Cron

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Kerberos Ticket Refresh Cron parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_profiler_scheduler_kerberos_ticket_refresh_cron
Required	true

Suppress Parameter Validation: Profiler Scheduler PID Directory Path

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler PID Directory Path parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_profiler_scheduler_pid_directory_path
Required	true

Suppress Parameter Validation: Profiler Scheduler Service Port

Description	
--------------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Service Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_profiler_scheduler_service_port

Required

true

Suppress Parameter Validation: Profiler Scheduler Spark conf**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Spark conf parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_profiler_scheduler_spark_conf

Required

true

Suppress Parameter Validation: Profiler Scheduler SSO Knox Public Key**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler SSO Knox Public Key parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_profiler_scheduler_sso_knox_public_key

Required

true

Suppress Parameter Validation: Profiler Scheduler Zookeeper Base Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Zookeeper Base Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_profiler_scheduler_zookeeper_base_path

Required

true

Suppress Parameter Validation: Profiler Scheduler Agent Advanced Configuration Snippet (Safety Valve) for profilerscheduler-conf/application.conf

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Agent Advanced Configuration Snippet (Safety Valve) for profilerscheduler-conf/application.conf parameter.

Related Name

Default Value

false

API Name

role_config_suppression_profilerscheduler-conf/application.conf_role_safety_valve

Required

true

Suppress Parameter Validation: Profiler Scheduler Agent Advanced Configuration Snippet (Safety Valve) for profilerscheduler-conf/dpprofiler.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Agent Advanced Configuration Snippet (Safety Valve) for profilerscheduler-conf/dpprofiler.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_profilerscheduler-conf/dpprofiler.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Profiler Scheduler Agent TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Agent TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Profiler Scheduler Agent TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Agent TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Profiler Scheduler Agent TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Agent TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Profiler Scheduler Agent TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Agent TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_profiler_scheduler_profiler_scheduler_agent_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_profiler_scheduler_profiler_scheduler_agent_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_scheduler_profiler_scheduler_agent_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_scheduler_profiler_scheduler_agent_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_scheduler_profiler_scheduler_agent_otelcol_health

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_scheduler_profiler_scheduler_agent_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_scheduler_profiler_scheduler_agent_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_profiler_scheduler_profiler_scheduler_agent_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_profiler_scheduler_profiler_scheduler_agent_unexpected_exits

Required

true

Service-Wide

Advanced

System Group

Description

The group that this service's processes should run as.

Related Name**Default Value**

dpprofiler

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name**Default Value**

dpprofiler

API Name

process_username

Required

true

Profiler Scheduler Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

PROFILER_SCHEDULER_service_env_safety_valve

Required

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Atlas Url Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Url Override parameter.

Related Name**Default Value**

false

API Name

`service_config_suppression_atlas_url`**Required**`true`**Suppress Parameter Validation: Livy Url Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Url Override parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_livy_url`**Required**`true`**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_process_groupname`**Required**`true`**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_process_username`**Required**`true`**Suppress Parameter Validation: Profiler Admin Url Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Admin Url Override parameter.

Related Name

Default Value

false

API Name

service_config_suppression_profiler_admin_url

Required

true

Suppress Parameter Validation: Profiler Metrics Url Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Metrics Url Override parameter.

Related Name

Default Value

false

API Name

service_config_suppression_profiler_metrics_url

Required

true

Suppress Configuration Validator: Profiler Scheduler Agent Count Validator

Description

Whether to suppress configuration warnings produced by the Profiler Scheduler Agent Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_profiler_scheduler_agent_count_validator

Required

true

Suppress Parameter Validation: Profiler Scheduler Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Profiler Scheduler Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_profiler_scheduler_service_env_safety_valve

Required

true

Suppress Parameter Validation: Ranger Hdfs Audit Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Hdfs Audit Path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_hdfs_audit_path

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Store Base Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Store Base Directory Path parameter.

Related Name**Default Value**

false

API Name

	service_config_suppression_store_base_dir_path
Required	true

Suppress Parameter Validation: User Directory Path

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the User Directory Path parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_user_dir_path
Required	true

Query Processor Properties in Cloudera Runtime 7.3.1

Role groups:

Query Processor

Advanced

Query Processor Advanced Configuration Snippet (Safety Valve) for conf-template/hue-query-processor.json

Description	For advanced use only. A string to be inserted into conf-template/hue-query-processor.json for this role only.
Related Name	
Default Value	
API Name	conf-template/hue-query-processor.json_role_safety_valve
Required	false

Query Processor Advanced Configuration Snippet (Safety Valve) for conf/hue-query-processor-log4j2.yml

Description	For advanced use only. A string to be inserted into conf/hue-query-processor-log4j2.yml for this role only.
Related Name	
Default Value	
API Name	conf/hue-query-processor-log4j2.yml_role_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Query Processor Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

QUERY_PROCESSOR_role_env_safety_valve

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

query_processor_fd_thresholds

Required

false

Query Processor Host Health Test**Description**

When computing the overall Query Processor health, consider the host's health.

Related Name**Default Value**

true

API Name

query_processor_host_health_enabled

Required

false

Query Processor Process Health Test**Description**

Enables the health test that the Query Processor's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

query_processor_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

API Name

query_processor_server_port

Required

true

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command:

resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no

limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Parameter Validation: Database Username**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Username parameter.

Related Name

Default Value

false

API Name

service_config_suppression_query_processor_database_username

Required

true

Suppress Parameter Validation: Query Processor Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Processor Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_query_processor_service_env_safety_valve

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Ranger Properties in Cloudera Runtime 7.3.1

Role groups:

Ranger Admin

Advanced

Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/authorization-migration-site.xml

Description

For advanced use only. A string to be inserted into conf/authorization-migration-site.xml for this role only.

Related Name**Default Value****API Name**

conf/authorization-migration-site.xml_role_safety_valve

Required

false

Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/hadoop-metrics2.properties

Description

For advanced use only. A string to be inserted into conf/hadoop-metrics2.properties for this role only.

Related Name**Default Value****API Name**

conf/hadoop-metrics2.properties_role_safety_valve

Required

false

Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml

Description

For advanced use only. A string to be inserted into conf/ranger-admin-site.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-admin-site.xml_role_safety_valve

Required

false

Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-plugin-extra-configs.xml

Description

For advanced use only. A string to be inserted into conf/ranger-plugin-extra-configs.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-plugin-extra-configs.xml_role_safety_valve

Required

false

Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name**Default Value**

ranger

API Name

process_groupname

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name

Default Value

ranger

API Name

process_username

Required

true

Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

RANGER_ADMIN_role_env_safety_valve

Required

false

Ranger Admin Advanced Configuration Snippet (Safety Valve) for solrconfig.properties

Description

For advanced use only. A string to be inserted into solrconfig.properties for this role only.

Related Name

Default Value

API Name

solrconfig.properties_role_safety_valve

Required

false

Ranger Admin Advanced Configuration Snippet (Safety Valve) for solrconfig.xml

Description

For advanced use only. A string to be inserted into solrconfig.xml for this role only.

Related Name

Default Value

API Name

solrconfig.xml_role_safety_valve

Required

false

Logs

Ranger Admin Log Directory

Description

The log directory for log files of the role Ranger Admin.

Related Name

ranger.logs.base.dir

Default Value

/var/log/ranger/admin

API Name

log_dir

Required

false

Ranger Admin Logging Threshold

Description

The minimum log level for Ranger Admin logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Ranger Admin Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ranger Admin logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Ranger Admin Max Log Size

Description

The maximum size, in megabytes, per log file for Ranger Admin logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.

- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

`otelcol_extensions`

Required

false

OpenTelemetry Collector Helper Port

Description

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value****API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password

Description

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify

`$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name

Default Value

API Name

`otelcol_remote_write_password`

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_url)` expression. Specify `$INFRA(cdp_request_signer_url)` when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

`$INFRA(cdp_request_signer_url)`

API Name

`otelcol_remote_write_url`

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_user)` expression. Specify `$INFRA(cdp_request_signer_username)` when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

`$INFRA(cdp_request_signer_username)`

API Name

`otelcol_remote_write_user`

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_exporters

Required

false

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_admin_fd_thresholds

Required

false

Ranger Admin Host Health Test**Description**

When computing the overall Ranger Admin health, consider the host's health.

Related Name**Default Value**

true

API Name

ranger_admin_host_health_enabled

Required

false

Ranger Admin Process Health Test**Description**

Enables the health test that the Ranger Admin's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ranger_admin_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Authorization Migration Skip Owner Policies****Description**

To skip {OWNER} policies when performing Sentry to Ranger Migration, enabled skipping of {OWNER} policies by default, or set it to false to have {OWNER} policies created.

Related Name

authorization.migration.skip.owner.policy

Default Value

true

API Name

authorization_migration_skip_owner_policy

Required

false

Ranger Admin Diagnostics Collection Timeout**Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name**Default Value**

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Exclude Users from Audit Access Tab**Description**

A single user, or a comma-separated list of multiple users that are excluded from Ranger audits when the Exclude Service Users checkbox is selected on the Ranger Audit Access tab in the Ranger Admin Web UI.

Related Name

ranger.accesslogs.exclude.users.list

Default Value

rangertagsync, mapred, spark, oozie, hue, streamsmgmr, streamsrepmgr, cruisecontrol, impala, zeppelin

API Name

ranger.accesslogs.exclude.users.list

Required

Kerberos Token Valid Seconds

Description

Kerberos token validity.

Related Name

ranger.admin.kerberos.token.valid.seconds

Default Value

30

API Name

ranger.admin.kerberos.token.valid.seconds

Required

false

Maximum Shards for Solr Collection of Ranger Audits

Description

Maximum number of shards for the Ranger Audit Solr collection. The recommended value is, number of replica given multiple by number of shards given for the collection.

Related Name

ranger.audit.solr.max.shards.per.node

Default Value

4

API Name

ranger.audit.solr.max.shards.per.node

Required

true

Replicas for Solr Collection of Ranger Audits

Description

Number of replicas for Ranger Audit Solr collection. The recommended value is, number of Solr servers running in the current cluster divided by number of shards for the collection.

Related Name

ranger.audit.solr.no.replica

Default Value

1

API Name

ranger.audit.solr.no.replica

Required

true

Enable Knox Trusted Proxy Support

Description

Determine if the Ranger service should allow authentication using Knox trusted proxy.

Related Name

ranger.authentication.allow.trustedproxy

Default Value

true

API Name

ranger.authentication.allow.trustedproxy

Required

false

Ranger DB Auth Type

Description

Ranger database authentication type.

Related Name

API Name

ranger.db.ssl.verifyServerCertificate

Required

false

Default Policy Groups

Description

Single or comma separated list of groups that are required in default policies for Ranger plugin services. The groups will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

Related Name

ranger.default.policy.groups

Default Value

API Name

ranger.default.policy.groups

Required

false

Default Policy Users

Description

Single or comma separated list of users that are required in default policies for Ranger plugin services. The users will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

Related Name

ranger.default.policy.users

Default Value

API Name

ranger.default.policy.users

Required

false

Default HBase Policy Groups

Description

Single or comma separated list of groups that are required in HBase default policies for Ranger plugin services. The groups will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

Related Name

ranger.hbase.default.admin.groups

Default Value**API Name**

ranger.hbase.default.admin.groups

Required

false

Ranger Admin Keystore File

Description

Specifies keystore file for Ranger Admin in case of 2-way SSL authentication to SSL enabled database used by Ranger.

Related Name

ranger.keystore.file

Default Value**API Name**

ranger.keystore.file

Required

false

Ranger Admin Keystore Password

Description

The password for Ranger Admin keystore file.

Related Name

ranger.keystore.password

Default Value**API Name**

ranger.keystore.password

Required

false

Admin AD Auth Base DN

Description

This parameter is only used if Authentication method is AD. The Distinguished Name (DN) of the starting point for directory server searches.

Related Name

ranger.ldap.ad.base.dn

Default Value**API Name**

ranger.ldap.ad.base.dn

Required

false

Admin AD Auth Bind DN**Description**

Full distinguished name (DN), including common name (CN), of an AD user account that has privileges to search for users. Only used if Authentication method is AD.

Related Name

ranger.ldap.ad.bind.dn

Default Value**API Name**

ranger.ldap.ad.bind.dn

Required

false

Admin AD Auth Domain Name**Description**

AD domain. Only used if Authentication method is AD.

Related Name

ranger.ldap.ad.domain

Default Value**API Name**

ranger.ldap.ad.domain

Required

false

Admin AD Auth Referral**Description**

This parameter is only used if Authentication method is AD. Set to follow if multiple AD servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed.

Related Name

ranger.ldap.ad.referral

Default Value

ignore

API Name

ranger.ldap.ad.referral

Required

false

Admin AD Auth URL**Description**

AD URL. Only used if Authentication method is AD.

Related Name

ranger.ldap.ad.url

Default Value**API Name**

ranger.ldap.ad.url

Required

false

Admin AD Auth User Search Filter**Description**

AD user search filter. Only used if Authentication method is AD.

Related Name

ranger.ldap.ad.user.searchfilter

Default Value**API Name**

ranger.ldap.ad.user.searchfilter

Required

false

Admin LDAP Auth Base DN**Description**

The Distinguished Name (DN) of the starting point for directory server searches. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.base.dn

Default Value**API Name**

ranger.ldap.base.dn

Required

false

Admin LDAP Auth Bind User**Description**

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search for users. This user is used for searching the users. This could be read-only LDAP user. Example: cn=admin,dc=example,dc=com.

Related Name

ranger.ldap.bind.dn

Default Value**API Name**

ranger.ldap.bind.dn

Required

false

Admin LDAP Auth Group Role Attribute

Description

LDAP group role attribute. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.group.roleattribute

Default Value**API Name**

ranger.ldap.group.roleattribute

Required

false

Admin LDAP Auth Group Search Base

Description

LDAP group searchbase. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.group.searchbase

Default Value**API Name**

ranger.ldap.group.searchbase

Required

false

Admin LDAP Auth Group Search Filter

Description

LDAP group search filter. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.group.searchfilter

Default Value**API Name**

ranger.ldap.group.searchfilter

Required

false

Admin LDAP Auth Referral

Description

This parameter is only used if Authentication method is LDAP. Set to follow if multiple LDAP servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

Related Name

ranger.ldap.referral

Default Value

ignore

API Name

ranger.ldap.referral

Required

false

Admin LDAP Auth URL

Description

LDAP server URL. Example: value = ldap://localhost:389 or ldaps://localhost:636.

Related Name

ranger.ldap.url

Default Value

API Name

ranger.ldap.url

Required

false

Admin LDAP Auth User DN Pattern

Description

LDAP user DN. Only used if Authentication method is LDAP.

Related Name

Default Value

API Name

ranger.ldap.user.dnpattern

Required

false

Admin LDAP Auth User Search Filter

Description

LDAP user search filter. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.user.searchfilter

Default Value

API Name

ranger.ldap.user.searchfilter

Required

false

Ranger Admin TLS/SSL Keystore File Alias

Description

The alias for the Ranger Admin TLS/SSL keystore file. User must configure the alias for the Ranger Admin keystore.

Related Name

ranger.service.https.attrib.keystore.keyalias

Default Value

API Name

ranger.service.https.attrib.keystore.keyalias

Required

false

Session Inactivity Timeout For Ranger Admin

Description

Session Inactivity Timeout for users to log in to the Ranger Admin Portal.

Related Name

ranger.service.inactivity.timeout

Default Value

-1 second(s)

API Name

ranger.service.inactivity.timeout

Required

false

SSO Browser Useragent

Description

Comma seperated values of browser agent.

Related Name

ranger.sso.browser.useragent

Default Value

Mozilla, chrome

API Name

ranger.sso.browser.useragent

Required

false

Enable Ranger SSO

Description

Determine if Ranger is Knox SSO enabled or not ?

Related Name

ranger.sso.enabled

Default Value

false

API Name

ranger.sso.enabled

Required

false

SSO Provider Url

Description

SSO provider url Example: https://KNOX_HOST:KNOX_PORT/gateway/
KNOXSSO_TOPOLOGY_NAME/api/v1/websso.

Related Name

ranger.sso.providerurl

Default Value**API Name**

ranger.sso.providerurl

Required

false

SSO Public Key**Description**

Public key for SSO cookie verification.

Related Name

ranger.sso.publicKey

Default Value**API Name**

ranger.sso.publicKey

Required

false

Enable Auto Create Tag Service**Description**

Whether to create tag service in Ranger Admin.

Related Name

ranger.tagservice.auto.create

Default Value

true

API Name

ranger.tagservice.auto.create

Required

false

Enable Tag Service Auto Link**Description**

Whether to link the Tag service set in "Tag Service Name" parameter to all available services in Ranger Admin.

Related Name

ranger.tagservice.auto.link

Default Value

true

API Name

ranger.tagservice.auto.link

Required

false

Tag Service Name

Description

Name of the tag service that will be created in Ranger Admin when "Enable Auto Create Tag Service" parameter is enabled.

Related Name

ranger.tagservice.auto.name

Default Value

cm_tag

API Name

ranger.tagservice.auto.name

Required

false

Admin UNIX Auth Remote Login

Description

Whether remote login is enabled. Only used if Authentication method is UNIX.

Related Name

ranger.unixauth.remote.login.enabled

Default Value

true

API Name

ranger.unixauth.remote.login.enabled

Required

false

Admin UNIX Auth Service Hostname

Description

Host where unix authentication service is running. Only used if Authentication method is UNIX. {{RANGER_USERSYNC_HOST}} is a placeholder value which will be replaced with the host where Ranger Usersync will be installed in the current cluster.

Related Name

ranger.unixauth.service.hostname

Default Value

RANGER_USERSYNC_HOST

API Name

ranger.unixauth.service.hostname

Required

false

Ranger Admin Access log Rotation Max Days

Description

The number of days to retain Ranger Admin Access logs before they are automatically rotated.

Related Name

ranger.accesslog.rotate.max.days

Default Value

15

API Name

ranger_accesslog_rotate_max_days

Required

false

Ranger Admin Canary Health Enabled

Description

Ranger Admin Canary is enabled/disabled.

Related Name

ranger_admin_canary_health_enabled

Default Value

true

API Name

ranger_admin_canary_health_enabled

Required

false

Ranger Admin Canary Health Timeout

Description

Timeout for Ranger Admin Canary health check.

Related Name

ranger_admin_canary_health_timeout

Default Value

30 second(s)

API Name

ranger_admin_canary_health_timeout

Required

false

Ranger Admin Client Java Opts

Description

These are Java command-line arguments for Ranger Admin. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name

ranger_admin_client_java_opts

Default Value

API Name

ranger_admin_client_java_opts

Required

false

Ranger Admin Conf Path

Description

Staging directory for Ranger Admin Configuration. This should generally not be changed.

Related Name

ranger_admin_conf_path

Default Value

/etc/ranger/admin

API Name

ranger_admin_conf_path

Required

true

Ranger Admin Max Heapsize**Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_admin_max_heap_size

Default Value

1 GiB

API Name

ranger_admin_max_heap_size

Required

true

Ranger Solr Collection Backend Configuration**Description**

Ranger Solr Collection Backend Configuration.

Related Name

ranger.audit.solr.config.backend.fs.type

Default Value

LocalFS

API Name

ranger_audit_solr_config_backend_fs_type

Required

false

Auto Delete Period in seconds for Solr Collection of Ranger Audits**Description**

Auto Delete Period in seconds for Solr Collection of Ranger Audits for expired documents.

Related Name

ranger.audit.solr.config.delete.trigger

Default Value

1 day(s)

API Name

ranger_audit_solr_config_delete_trigger

Required

false

Time To Live for Solr Collection of Ranger Audits

Description

Time To Live for Solr Collection of Ranger Audits.

Related Name

ranger.audit.solr.config.ttl

Default Value

90

API Name

ranger_audit_solr_config_ttl

Required

false

Admin Authentication Method

Description

Authentication Method for login to Ranger Admin.

Related Name

ranger.authentication.method

Default Value

PAM

API Name

ranger_authentication_method

Required

false

Admin AD Auth Bind Password

Description

Password for the account that can search for users. Only used if Authentication method is AD.

Related Name

ranger.ldap.ad.bind.password

Default Value**API Name**

ranger_ldap_ad_bind_password

Required

false

Admin LDAP Auth Bind User Password

Description

Password for the account that can search for users.

Related Name

ranger.ldap.bind.password

Default Value**API Name**

ranger_ldap_bind_password

Required

false

Knox Proxy User Groups

Description

Accepts a list of group names. The Knox user can impersonate only the users that belong to the groups specified in the list. The wildcard value * may be used to allow impersonation of any user belonging to any group.

Related Name

ranger.proxyuser.knox.groups

Default Value

*

API Name

ranger_proxyuser_knox_groups

Required

false

Knox Proxy User Hosts

Description

Accepts a list of IP addresses, IP address ranges in CIDR format and/or host names. The Knox user can impersonate only the requests coming from hosts specified in the list. The wildcard value * may be used to allow impersonation from any host.

Related Name

ranger.proxyuser.knox.hosts

Default Value

*

API Name

ranger_proxyuser_knox_hosts

Required

false

Knox Proxy User Users

Description

Accepts a list of usernames. The Knox user can impersonate only the users specified in the list. The wildcard value * may be used to allow impersonation of any user.

Related Name

ranger.proxyuser.knox.users

Default Value

*

API Name

ranger_proxyuser_knox_users

Required

false

Ranger Tomcat Work Dir

Description

Tomcat work directory for Ranger Admin.

Related Name

ranger.tomcat.work.dir

Default Value

/var/lib/ranger/admin/work

API Name

ranger_tomcat_work_dir

Required

true

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Admin Unix Auth Service Port****Description**

Port for unix authentication service. Only used if Authentication method is UNIX.

Related Name

ranger.unixauth.service.port

Default Value

5151

API Name

ranger.unixauth.service.port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Ranger Admin roles.

Related Name**Default Value**

`rangeradmin`**API Name**`kerberos_role_princ_name`**Required**`true`**Ranger Admin TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Admin might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`ranger.truststore.file`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Ranger Admin TLS/SSL Trust Store Password****Description**

The password for the Ranger Admin TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name`ranger.truststore.password`**Default Value****API Name**`ssl_client_truststore_password`**Required**`false`**Enable TLS/SSL for Ranger Admin****Description**

Encrypt communication between clients and Ranger Admin using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name`ranger.service.https.attrib.ssl.enabled`**Default Value**`false`**API Name**`ssl_enabled`**Required**`false`

Ranger Admin TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Admin is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ranger.https.attrib.keystore.file

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ranger Admin TLS/SSL Server Keystore File Password

Description

The password for the Ranger Admin keystore file.

Related Name

ranger.service.https.attrib.keystore.pass

Default Value**API Name**

ssl_server_keystore_password

Required

false

SSL/TLS Cipher Suite

Description

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

Related Name

ranger.tomcat.ciphers

Default Value

modern2018

API Name

tls_ciphers

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/authorization-migration-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/authorization-migration-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_conf/authorization-migration-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/hadoop-metrics2.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/hadoop-metrics2.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/hadoop-metrics2.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/ranger-admin-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-plugin-extra-configs.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-plugin-extra-configs.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/ranger-plugin-extra-configs.xml_role_safety_valve

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Ranger Admin Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_otelcol_helper_port`**Required**`true`**Suppress Parameter Validation: OpenTelemetry Collector Processors Section****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_processors`**Required**`true`**Suppress Parameter Validation: OpenTelemetry Collector Receivers Section****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_receivers`**Required**`true`**Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_remote_write_password`**Required**`true`**Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

API Name

role_config_suppression_ranger.default.policy.users

Required

true

Suppress Parameter Validation: Default HBase Policy Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default HBase Policy Groups parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.hbase.default.admin.groups

Required

true

Suppress Parameter Validation: Ranger Admin Keystore File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Keystore File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.keystore.file

Required

true

Suppress Parameter Validation: Ranger Admin Keystore Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Keystore Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.keystore.password

Required

true

Suppress Parameter Validation: Admin AD Auth Base DN

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Base DN parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.base.dn

Required

true

Suppress Parameter Validation: Admin AD Auth Bind DN

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Bind DN parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.bind.dn

Required

true

Suppress Parameter Validation: Admin AD Auth Domain Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Domain Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.domain

Required

true

Suppress Parameter Validation: Admin AD Auth URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.url

Required

true

Suppress Parameter Validation: Admin AD Auth User Search Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth User Search Filter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.user.searchfilter

Required

true

Suppress Parameter Validation: Admin LDAP Auth Base DN**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Base DN parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.base.dn

Required

true

Suppress Parameter Validation: Admin LDAP Auth Bind User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Bind User parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.bind.dn

Required

true

Suppress Parameter Validation: Admin LDAP Auth Group Role Attribute**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Role Attribute parameter.

Related Name**Default Value**

false

API Name

true

Suppress Parameter Validation: Admin LDAP Auth Group Search Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Search Filter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.group.searchfilter

Required

true

Suppress Parameter Validation: Admin LDAP Auth URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.url

Required

true

Suppress Parameter Validation: Admin LDAP Auth User DN Pattern**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth User DN Pattern parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_ranger.ldap.user.dnpattern`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth User Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth User Search Filter parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.user.searchfilter`**Required**`true`**Suppress Parameter Validation: Ranger Admin TLS/SSL Keystore File Alias****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Keystore File Alias parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.service.https.attrib.keystore.keyalias`**Required**`true`**Suppress Parameter Validation: SSO Browser Useragent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Browser Useragent parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.sso.browser.useragent`**Required**`true`**Suppress Parameter Validation: SSO Provider Url****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Provider Url parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.sso.providerurl

Required

true

Suppress Parameter Validation: SSO Public Key

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Public Key parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.sso.publickey

Required

true

Suppress Parameter Validation: Tag Service Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tag Service Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.tagservice.auto.name

Required

true

Suppress Parameter Validation: Admin UNIX Auth Service Hostname

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin UNIX Auth Service Hostname parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.unixauth.service.hostname

Required

true

Suppress Parameter Validation: Admin Unix Auth Service Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Unix Auth Service Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.unixauth.service.port

Required

true

Suppress Parameter Validation: Ranger Admin Client Java Opts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Client Java Opts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_admin_client_java_opts

Required

true

Suppress Parameter Validation: Ranger Admin Conf Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Conf Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_admin_conf_path

Required

true

Suppress Parameter Validation: Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_admin_role_env_safety_valve

conf/ranger-tagsync-policymgr-ssl.xml_role_safety_valve

Required

false

Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml

Description

For advanced use only. A string to be inserted into conf/ranger-tagsync-site.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-tagsync-site.xml_role_safety_valve

Required

false

Ranger Tagsync Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name**Default Value****API Name**

`log4j_safety_valve`**Required**`false`**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**`false`**API Name**`metric_config_auto_refresh`**Required**`false`**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name`oom_heap_dump_dir`**Default Value**`/tmp`**API Name**`oom_heap_dump_dir`**Required**`false`**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**`false`**API Name**`oom_heap_dump_enabled`**Required**`true`**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name**Default Value**

ranger

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User**Description**

The user that this role's processes should run as.

Related Name**Default Value**

ranger

API Name

process_username

Required

true

Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

RANGER_TAGSYNC_role_env_safety_valve

Required

false

Logs

Ranger Tagsync Log Directory

Description

The log directory for log files of the role Ranger Tagsync.

Related Name

ranger.tagsync.logdir

Default Value

/var/log/ranger/tagsync

API Name

log_dir

Required

false

Ranger Tagsync Logging Threshold

Description

The minimum log level for Ranger Tagsync logs

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Ranger Tagsync Max Log Size

Description

The maximum size, in megabytes, per log file for Ranger Tagsync logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Description

When computing the overall Ranger Tagsync health, consider the host's health.

Related Name**Default Value**

true

API Name

ranger_tagsync_host_health_enabled

Required

false

Ranger Tagsync Process Health Test

Description

Enables the health test that the Ranger Tagsync's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ranger_tagsync_scm_health_enabled

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Atlas Source: Kafka Consumer Group

Description

Kafka consumer group.

Related Name

atlas.kafka.entities.group.id

Default Value

ranger_entities_consumer

API Name

atlas.kafka.entities.group.id

Required

false

Ranger Tagsync HA Zookeeper Zkroot

Description

Zookeeper Zkroot for Ranger Tagsync when HA is enabled.

Related Name

ranger-tagsync.server.ha.zookeeper.zkroot

Default Value

/ranger-tagsync

API Name

ranger-tagsync.server.ha.zookeeper.zkroot

Required

false

Capture Cluster name

Description

Capture cluster name.

Related Name

ranger.tagsync.atlas.default.cluster.name

Default Value

API Name

ranger.tagsync.atlas.default.cluster.name

Required

false

Enable Ranger Tagsync Cookie Authentication

Description

Enable cookie-based authentication for requests going from Ranger Tagsync to Ranger Admin.

Related Name

ranger.tagsync.cookie.enabled

Default Value

true

API Name

ranger.tagsync.cookie.enabled

Required

false

Ranger Tagsync Username

Description

Ranger Tagsync username in Ranger Admin.

Related Name

ranger.tagsync.dest.ranger.username

Default Value

rangertagsync

API Name

ranger.tagsync.dest.ranger.username

Required

false

Ranger Tagsync TLS/SSL Keystore File Alias

Description

The alias for the Ranger Tagsync TLS/SSL keystore file. User must configure the alias for the Ranger Tagsync keystore.

Related Name

ranger.tagsync.service.https.attrib.keystore.keyalias

Default Value

API Name

ranger.tagsync.service.https.attrib.keystore.keyalias

Required

false

Enable File Tag Source

Description

Whether to sync tags from file.

Related Name

ranger.tagsync.source.file

Default Value

false

API Name

ranger.tagsync.source.file

Required

false

File Source: File Update Polling Interval

Description

Sync Interval for updating tags from file.

Related Name

ranger.tagsync.source.file.check.interval.millis

Default Value

1 minute(s)

API Name

ranger.tagsync.source.file.check.interval.millis

Required

false

File Source: Filename

Description

Filename containing tags.

Related Name

ranger.tagsync.source.file.filename

Default Value

API Name

ranger.tagsync.source.file.filename

Required

false

Ranger Tagsync Client Java Opts

Description

These are Java command-line arguments for Ranger Tagsync. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name

ranger_tagsync_client_java_opts

Default Value

API Name

ranger_tagsync_client_java_opts

Required

false

Ranger Tagsync Conf Path

Description

Staging directory for Ranger Tagsync Configuration. This should generally not be changed.

Related Name

ranger_tagsync_conf_path

Default Value

/etc/ranger/tagsync

API Name

ranger_tagsync_conf_path

Required

true

Ranger Tagsync Max Heapsize

Description

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_tagsync_max_heap_size

Default Value

1 GiB

API Name

ranger_tagsync_max_heap_size

Required

true

Enable Ranger Tagsync Metrics

Description

Controls whether the Ranger Tagsync metrics are enabled.

Related Name

ranger.tagsync.metrics.enabled

Default Value

true

API Name

ranger_tagsync_metrics_enabled

Required

false

Ranger Tagsync Metrics File Name

Description

File name for the metrics exposed by Ranger Tagsync. The file is updated at the frequency configured by Ranger Tagsync Metrics Frequency.

Related Name

ranger.tagsync.metrics.filename

Default Value

metrics.json

API Name

ranger_tagsync_metrics_filename

Required

false

Ranger Tagsync Metrics File Path

Description

The location at which the metrics exposed by Ranger Tagsync will be written.

Related Name

ranger.tagsync.metrics.filepath

Default Value

/var/log/ranger/metrics-tagsync

API Name

ranger_tagsync_metrics_filepath

Required

false

Ranger Tagsync Metrics Frequency**Description**

The frequency at which the metrics are logged at Ranger Tagsync Metrics File Path.

Related Name

ranger.tagsync.metrics.frequencytimeinmillis

Default Value

1 minute(s)

API Name

ranger_tagsync_metrics_frequency

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Tagsync HTTP Port****Description**

HTTP Port for Ranger Tagsync.

Related Name

ranger.tagsync.service.http.port

Default Value

8180

API Name

ranger_tagsync_http_port

Required

true

Tagsync HTTPS port**Description**

HTTPS Port for Ranger Tagsync. Only used when SSL is enabled for Ranger Tagsync.

Related Name

ranger.tagsync.service.https.port

Default Value

8183

API Name

ranger_tagsync_https_port

Required

true

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight
Default Value
100
API Name
rm_cpu_weight
Required
true

Custom Control Group Resources (overrides Cgroup settings)

Description
Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgroup command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***
Related Name
custom.cgroups
Default Value
API Name
rm_custom_resources
Required
false

Cgroup V2 I/O Weight

Description
Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.
Related Name
io.weight
Default Value
100
API Name
rm_io_weight
Required
true

Cgroup V1 Memory Hard Limit

Description
Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'
Related Name
memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes

not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the Ranger Tagsync roles.

Related Name

Default Value

rangertagsync

API Name

kerberos_role_princ_name

Required

true

Ranger Tagsync TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Tagsync might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

xasecure.policymgr.clientssl.truststore

Default Value

API Name

ssl_client_truststore_location

Required

false

Ranger Tagsync TLS/SSL Trust Store Password

Description

The password for the Ranger Tagsync TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

xasecure.policymgr.clientssl.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger Tagsync**Description**

Encrypt communication between clients and Ranger Tagsync using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger.tagsync.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger Tagsync TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Tagsync is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

xasecure.policymgr.clientssl.keystore

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ranger Tagsync TLS/SSL Server Keystore File Password**Description**

The password for the Ranger Tagsync keystore file.

Related Name

xasecure.policymgr.clientssl.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Parameter Validation: Atlas Source: Kafka Consumer Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Source: Kafka Consumer Group parameter.

Related Name**Default Value**

false

API Name

Ranger Usersync**Advanced****Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-extra-attrs.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-ugsync-extra-attrs.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-ugsync-extra-attrs.xml_role_safety_valve

Required

false

Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-ugsync-site.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-ugsync-site.xml_role_safety_valve

Required

false

Ranger Usersync Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group**Description**

The group that this role's processes should run as.

Related Name**Default Value**

ranger

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name**Default Value**

	ranger
API Name	process_username
Required	true

Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)

Description	For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.
Related Name	
Default Value	
API Name	RANGER_USERSYNC_role_env_safety_valve
Required	false

Logs

Ranger Usersync Log Directory

Description	The log directory for log files of the role Ranger Usersync.
Related Name	ranger.usersync.logdir
Default Value	/var/log/ranger/usersync
API Name	log_dir
Required	false

Ranger Usersync Logging Threshold

Description	The minimum log level for Ranger Usersync logs
Related Name	
Default Value	INFO
API Name	log_threshold
Required	false

Ranger Usersync Maximum Log File Backups

Description	
--------------------	--

The maximum number of rolled log files to keep for Ranger Usersync logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Ranger Usersync Max Log Size**Description**

The maximum size, in megabytes, per log file for Ranger Usersync logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_usersync_fd_thresholds

Required

false

Ranger Usersync Host Health Test

Description

When computing the overall Ranger Usersync health, consider the host's health.

Related Name**Default Value**

true

API Name

ranger_usersync_host_health_enabled

Required

false

Ranger Usersync Process Health Test

Description

Enables the health test that the Ranger Usersync's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ranger_usersync_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

ranger.usersync.group.objectclass

Default Value**API Name**

ranger.usersync.group.objectclass

Required

false

Usersync Group Search Base**Description**

Search base for groups. Sample value would be ou=groups,dc=hadoop,dc=apache,dc=org. The parameter overrides value specified in ranger.usersync.ldap.user.searchbase. If a value is not specified, takes the value of ranger.usersync.ldap.user.searchbase. Multiple Ous can be configured with ; (semicolon) separated eg: ou=groups,DC=example,DC=com;ou=group1,ou=group2.

Related Name

ranger.usersync.group.searchbase

Default Value**API Name**

ranger.usersync.group.searchbase

Required

false

Usersync Group Search Filter

Description

Optional additional filter constraining the groups selected for syncing. A sample value would be (dept=eng).

Related Name

ranger.usersync.group.searchfilter

Default Value**API Name**

ranger.usersync.group.searchfilter

Required

false

Usersync Group Search Scope

Description

Search scope for the groups. Value "base" indicates that only the entry specified as the search base in ranger.usersync.group.searchbase should be considered. One "indicates" that only the immediate children of the entry specified as the search base in ranger.usersync.group.searchbase should be considered. "Sub" indicates that the entry specified as the search base in ranger.usersync.group.searchbase, and all of its subordinates to any depth, should be considered.

Related Name

ranger.usersync.group.searchscope

Default Value

sub

API Name

ranger.usersync.group.searchscope

Required

false

Usersync Keystore Password

Description

Keystore password.

Related Name

ranger.usersync.keystore.password

Default Value

API Name

ranger.usersync.keystore.password

Required

false

Usersync Bind User

Description

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search for users. This user is used for searching the users. This could be read-only LDAP user. Example: cn=admin,dc=example,dc=com.

Related Name

ranger.usersync.ldap.binddn

Default Value

true

API Name

ranger.usersync.ldap.deltasync

Required

false

Usersync Group Hierarchy Levels

Description

Levels of LDAP directory tree where the groups need to be searched.

Related Name

ranger.usersync.ldap.grouphierarchylevels

Default Value

0

API Name

ranger.usersync.ldap.grouphierarchylevels

Required

false

Usersync Groupname Case Conversion

Description

Used for converting syncing groups to the selected case conversion.

Related Name

ranger.usersync.ldap.groupname.caseconversion

Default Value

none

API Name

ranger.usersync.ldap.groupname.caseconversion

Required

false

Usersync Ldap Group Names

Description

Provide group names that need to be synced to Ranger Admin. The group names will get separated by semicolons.

Related Name

ranger.usersync.ldap.groupnames

Default Value**API Name**

ranger.usersync.ldap.groupnames

Required

false

Usersync Referral

Description

Set to follow if multiple LDAP/AD servers are configured to return continuation references for results. Set to ignore if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

Related Name

ranger.usersync.ldap.referral

Default Value

ignore

API Name

ranger.usersync.ldap.referral

Required

false

Usersync Enable STARTTLS

Description

Enable LDAP STARTTLS.

Related Name

ranger.usersync.ldap.starttls

Default Value

false

API Name

ranger.usersync.ldap.starttls

Required

false

Usersync LDAP/AD URL

Description

LDAP server URL. Example: value = ldap://localhost:389 or ldaps://localhost:636.

Related Name

ranger.usersync.ldap.url

Default Value**API Name**

ranger.usersync.ldap.url

Required

false

Usersync User Name Attribute**Description**

LDAP user name attribute. Example: sAMAccountName in AD, uid or cn in OpenLDAP.

Related Name

ranger.usersync.ldap.user.nameattribute

Default Value**API Name**

ranger.usersync.ldap.user.nameattribute

Required

false

Usersync User Object Class**Description**

LDAP User Object Class. Example: person or user.

Related Name

ranger.usersync.ldap.user.objectclass

Default Value**API Name**

ranger.usersync.ldap.user.objectclass

Required

false

Usersync User Search Base**Description**

Search base for users. Sample value would be ou=users,dc=hadoop,dc=apache,dc=org.
Multiple Ous can be configured with ; (semicolon) separated eg:
cn=users,dc=example,dc=com;ou=example1,ou=example2.

Related Name

ranger.usersync.ldap.user.searchbase

Default Value**API Name**

ranger.usersync.ldap.user.searchbase

Required

Default Value

5151

API Name

ranger.usersync.port

Required

true

Ranger Usersync Role Assignment List Delimiter**Description**

The parameter is used to specify delimiter while syncing roles to users and groups in Ranger Admin. It is a delimiter for roles. Example - "ROLE_SYS_ADMIN:u:username1,username2&ROLE_KEY_ADMIN:g:groupname1", where ROLE_SYS_ADMIN and ROLE_KEY_ADMIN are roles in Ranger Admin separated by delimiter &. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

Related Name

ranger.usersync.role.assignment.list.delimiter

Default Value

&

API Name

ranger.usersync.role.assignment.list.delimiter

Required

false

Ranger Usersync TLS/SSL Keystore File Alias**Description**

The alias for the Ranger Usersync TLS/SSL keystore file. User must configure the alias for the Ranger Usersync keystore.

Related Name

ranger.usersync.service.https.attrib.keystore.keyalias

Default Value**API Name**

ranger.usersync.service.https.attrib.keystore.keyalias

Required

false

Usersync Sleeptime interval**Description**

Sleep time interval between user sync operations in milliseconds.

Related Name

ranger.usersync.sleeptimeinmillisbetweensynccycle

Default Value

1 minute(s)

API Name

ranger.usersync.sleeptimeinmillisbetweensynccycle

Required

false

Source for Syncing User and Groups

Description

For syncing from Ldap source, use "org.apache.ranger.ldapusersync.process.LdapUserGroupBuilder". For syncing from Unix source, use "org.apache.ranger.unixusersync.process.UnixUserGroupBuilder". For syncing from File source, use "org.apache.ranger.unixusersync.process.FileSourceUserGroupBuilder"

Related Name

ranger.usersync.source.impl.class

Default Value

org.apache.ranger.unixusersync.process.UnixUserGroupBuilder

API Name

ranger.usersync.source.impl.class

Required

true

Ranger Usersync Unix Backend

Description

The backend mechanism to read users and groups from a UNIX system. The value is applicable only on UNIX-based systems.

Related Name

ranger.usersync.unix.backend

Default Value

nss

API Name

ranger.usersync.unix.backend

Required

false

Usersync UNIX Minimum User ID

Description

Minimum User ID to start syncing. This should be set to avoid syncing of UNIX system-level users in the Ranger Admin.

Related Name

ranger.usersync.unix.minUserId

Default Value

500

API Name

ranger.usersync.unix.minUserId

Required

false

Usersync Enable User Search

Description

Enable User Search to search users based on the attributes available from ranger.usersync.ldap.user.searchbase, ranger.usersync.ldap.user.objectclass,

ranger.usersync.ldap.user.searchfilter and ranger.usersync.ldap.user.nameattribute config parameters. Group information is available as part of the "memberof".

Related Name

ranger.usersync.user.searchenabled

Default Value

true

API Name

ranger.usersync.user.searchenabled

Required

false

Ranger Usersync Username Groupname Assignment List Delimiter**Description**

The parameter is used to specify a delimiter while syncing users and groups in Ranger Admin. Used as a delimiter to differentiate between two or more users and groups. Example - "ROLE_SYS_ADMIN:u:username1,username2", where username1 and username2 are separated by ,. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

Related Name

ranger.usersync.username.groupname.assignment.list.delimiter

Default Value

,

API Name

ranger.usersync.username.groupname.assignment.list.delimiter

Required

false

Ranger Usersync User Groups Assignment List Delimiter**Description**

The parameter is used to specify delimiter while syncing users and groups along with specified roles in Ranger Admin. It is a delimiter to differentiate between users and groups from respective roles. Example - "ROLE_SYS_ADMIN:u:username1,username2&ROLE_SYS_ADMIN:g:groupname1,groupname2", where ROLE_SYS_ADMIN is a role. "u" is used to denote the list of users followed by actual usernames which are username1 and username2. While "g" is used to denote the list of groups followed by actual groupnames which are groupname1 and groupname2. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

Related Name

ranger.usersync.users.groups.assignment.list.delimiter

Default Value

:

API Name

ranger.usersync.users.groups.assignment.list.delimiter

Required

false

Ranger Usersync Service User Based Role Assignment Rules**Description**

The parameter is used to assign roles to service users synced in Ranger Admin. Based on the given values specified in the above delimiter parameters, Ranger Usersync will parse the value specified in this parameter and sync users along with roles given.

Related Name

ranger.usersync.whitelist.users.role.assignment.rules

Default Value

&ROLE_SYS_ADMIN:u:admin, rangerusersync, rangertagsync, ranger, rangeradmin, rangerraz, rangerkms&ROLE_KEY_ADMIN:u:keyadmin, rangerkms

API Name

ranger.usersync.whitelist.users.role.assignment.rules

Required

false

AWS Group Mapping**Description**

The list of AWS group's mapping separated by semicolon.

Related Name

aws.group.cloud_id.mapping

Default Value**API Name**

ranger_usersync_aws_group_mapping

Required

false

AWS User Mapping**Description**

The list of AWS user's mapping separated by semicolon.

Related Name

Default Value**API Name**

ranger_usersync_aws_user_mapping

Required

false

AZURE Group Mapping**Description**

The list of AZURE group's mapping separated by semicolon.

Related Name

azure.group.cloud_id.mapping

Default Value**API Name**`ranger_usersync_azure_group_mapping`**Required**`false`**AZURE User Mapping****Description**

The list of AZURE user's mapping separated by semicolon.

Related Name`azure.user.cloud_id.mapping`**Default Value****API Name**`ranger_usersync_azure_user_mapping`**Required**`false`**Ranger Usersync Client Java Opts****Description**

These are Java command-line arguments for Ranger Usersync. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name`ranger_usersync_client_java_opts`**Default Value****API Name**`ranger_usersync_client_java_opts`**Required**`false`**Ranger Usersync Conf Path****Description**

Staging directory for Ranger Usersync Configuration. This should generally not be changed.

Related Name`ranger_usersync_conf_path`**Default Value**`/etc/ranger/usersync`**API Name**`ranger_usersync_conf_path`**Required**`true`**GCP Group Mapping****Description**

The list of GCP group's mapping separated by semicolon.

Related Name

gcp.group.cloud_id.mapping

Default Value

API Name

ranger_usersync_gcp_group_mapping

Required

false

GCP User Mapping

Description

The list of GCP user's mapping separated by semicolon.

Related Name

gcp.user.cloud_id.mapping

Default Value

API Name

ranger_usersync_gcp_user_mapping

Required

false

Usersync Bind User Password

Description

Password for the LDAP bind user used for searching users.

Related Name

ranger.usersync.ldap.ldapbindpassword

Default Value

API Name

ranger_usersync_ldap_ldapbindpassword

Required

false

Ranger Usersync Max Heapsize

Description

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_usersync_max_heap_size

Default Value

1 GiB

API Name

ranger_usersync_max_heap_size

Required

true

Enable Ranger Usersync Metrics

Description

Controls whether the Ranger Usersync metrics are enabled.

Related Name

ranger.usersync.metrics.enabled

Default Value

true

API Name

ranger_usersync_metrics_enabled

Required

false

Ranger Usersync Metrics File Name

Description

File name for the metrics exposed by Ranger Usersync. The file is updated at the frequency configured by Ranger Usersync Metrics Frequency.

Related Name

ranger.usersync.metrics.filename

Default Value

metrics.json

API Name

ranger_usersync_metrics_filename

Required

false

Ranger Usersync Metrics File Path

Description

The location at which the metrics exposed by Ranger Usersync will be written.

Related Name

ranger.usersync.metrics.filepath

Default Value

/var/log/ranger/metrics-usersync

API Name

ranger_usersync_metrics_filepath

Required

false

Ranger Usersync Metrics Frequency

Description

The frequency at which the metrics are logged at Ranger Usersync Metrics File Path.

Related Name

ranger.usersync.metrics.frequencytimeinmillis

Default Value

1 minute(s)

API Name

ranger_usersync_metrics_frequency

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Ranger Usersync HTTP port****Description**

HTTP Port for Ranger Usersync.

Related Name

ranger.usersync.service.http.port

Default Value

8280

API Name

ranger_usersync_http_port

Required

true

Ranger Usersync HTTPS port**Description**

HTTPS Port for Ranger Usersync. Only used when SSL is enabled for Ranger Usersync.

Related Name

ranger.usersync.service.https.port

Default Value

8283

API Name

ranger_usersync_https_port

Required

true

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command:

resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no

limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the Ranger Usersync roles.

Related Name**Default Value**

rangerusersync

API Name

kerberos_role_princ_name

Required

true

Ranger Usersync TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Usersync might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ranger.usersync.truststore.file

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ranger Usersync TLS/SSL Trust Store Password

Description

The password for the Ranger Usersync TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ranger.usersync.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger Usersync

Description

Encrypt communication between clients and Ranger Usersync using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger.usersync.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger Usersync TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Usersync is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ranger.usersync.service.https.attrib.keystore.file

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ranger Usersync TLS/SSL Server Keystore File Password**Description**

The password for the Ranger Usersync keystore file.

Related Name

ranger.usersync.service.https.attrib.keystore.pass

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

role_config_suppression_ranger.usersync.ldap.groupnames

Required

true

Suppress Parameter Validation: Usersync LDAP/AD URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync LDAP/AD URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.url

Required

true

Suppress Parameter Validation: Usersync User Name Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Name Attribute parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.nameattribute

Required

true

Suppress Parameter Validation: Usersync User Object Class

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Object Class parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.objectclass

Required

true

Suppress Parameter Validation: Usersync User Search Base

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Search Base parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.searchbase

Required

true

Suppress Parameter Validation: Usersync User Search Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Search Filter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.searchfilter

Required

true

Suppress Parameter Validation: Ranger Usersync Policymgr Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Policymgr Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.policymgr.username

Required

true

Suppress Parameter Validation: Ranger Usersync Unix Service Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Unix Service Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.port

Required

true

Suppress Parameter Validation: Ranger Usersync Role Assignment List Delimiter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Role Assignment List Delimiter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.role.assignment.list.delimiter

Required

true

Suppress Parameter Validation: Ranger Usersync TLS/SSL Keystore File Alias

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Keystore File Alias parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.service.https.attrib.keystore.keyalias

Required

true

Suppress Parameter Validation: Ranger Usersync Username Groupname Assignment List Delimiter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Username Groupname Assignment List Delimiter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.username.groupname.assignment.list.delimiter

Required

true

Suppress Parameter Validation: Ranger Usersync User Groups Assignment List Delimiter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync User Groups Assignment List Delimiter parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_ranger.usersync.users.groups.assignment.list.delimiter`**Required**`true`**Suppress Parameter Validation: Ranger Usersync Service User Based Role Assignment Rules****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Service User Based Role Assignment Rules parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.whitelist.users.role.assignment.rules`**Required**`true`**Suppress Parameter Validation: AWS Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AWS Group Mapping parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger_usersync_aws_group_mapping`**Required**`true`**Suppress Parameter Validation: AWS User Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AWS User Mapping parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger_usersync_aws_user_mapping`**Required**`true`**Suppress Parameter Validation: AZURE Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AZURE Group Mapping parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_azure_group_mapping

Required

true

Suppress Parameter Validation: AZURE User Mapping**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AZURE User Mapping parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_usersync_azure_user_mapping

Required

true

Suppress Parameter Validation: Ranger Usersync Client Java Opts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Client Java Opts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_usersync_client_java_opts

Required

true

Suppress Parameter Validation: Ranger Usersync Conf Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Conf Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_usersync_conf_path

Required

true

Suppress Parameter Validation: GCP Group Mapping**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the GCP Group Mapping parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_gcp_group_mapping

Required

true

Suppress Parameter Validation: GCP User Mapping

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the GCP User Mapping parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_gcp_user_mapping

Required

true

Suppress Parameter Validation: Ranger Usersync HTTP port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync HTTP port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_http_port

Required

true

Suppress Parameter Validation: Ranger Usersync HTTPS port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync HTTPS port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_https_port

Required

true

Suppress Parameter Validation: Usersync Bind User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Bind User Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_ldap_ldapbindpassword

Required

true

Suppress Parameter Validation: Ranger Usersync Metrics File Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Metrics File Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_metrics_filename

Required

true

Suppress Parameter Validation: Ranger Usersync Metrics File Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Metrics File Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_metrics_filepath

Required

true

Suppress Parameter Validation: Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

	false
API Name	role_config_suppression_ranger_usersync_role_env_safety_valve
Required	true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Ranger Usersync TLS/SSL Trust Store File

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Ranger Usersync TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Ranger Usersync TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Ranger Usersync TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_usersync_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_usersync_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_usersync_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_usersync_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_usersync_otelcol_health

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_usersync_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_usersync_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_usersync_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_usersync_unexpected_exits

Required

true

Service-Wide

Advanced

Ranger Database JDBC Url Override

Description

Specify JDBC url override for connecting to Ranger database. If not specified, the JDBC url will be calculated on basis of the Ranger database parameters specified.

Related Name

ranger.jpa.jdbc.url

Default Value

API Name

ranger_database_jdbc_url

Required

false

Ranger Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

RANGER_service_env_safety_valve

Required

false

Database**Ranger Database Host****Description**

Hostname of the database used by Ranger Admin. If the port is non-default for your database type, use host:port notation.

Related Name

ranger_database_host

Default Value

localhost

API Name

ranger_database_host

Required

false

Ranger Database Name**Description**

Name of Ranger Admin database.

Related Name

ranger_database_name

Default Value

ranger

API Name

ranger_database_name

Required

false

Ranger Database User Password**Description**

Password for Ranger Admin database.

Related Name

ranger.jpa.jdbc.password

Default Value**API Name**

ranger_database_password

Required

true

Ranger Database Port

Description

Port number for Ranger Admin database.

Related Name

ranger_database_port

Default Value

5432

API Name

ranger_database_port

Required

ranger_database_user

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Healthy Ranger Admin Monitoring Thresholds

Description

The health test thresholds of the overall Ranger Admin health. The check returns "Concerning" health if the percentage of "Healthy" Ranger Admins falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger Admins falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 49.0 %

API Name

RANGER_RANGER_ADMIN_healthy_thresholds

Required

false

Healthy Ranger Tagsync Monitoring Thresholds

Description

The health test thresholds of the overall Ranger Tagsync health. The check returns "Concerning" health if the percentage of "Healthy" Ranger Tagsyncs falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger Tagsyncs falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 49.0 %

API Name

RANGER_RANGER_TAGSYNC_healthy_thresholds

Required

false

Healthy Ranger Usersync Monitoring Thresholds

Description

The health test thresholds of the overall Ranger Usersync health. The check returns "Concerning" health if the percentage of "Healthy" Ranger Usersyncs falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger Usersyncs falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 49.0 %

API Name

RANGER_RANGER_USERSYNC_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value**API Name**

smon_derived_configs_safety_valve

Required

false

Other**Cloud Storage Paths****Description**

A comma-separated list of cloud storage paths used by services in a Data Lake cluster. These storage paths are used to create default policies for ADLS-Gen2 service in Ranger.

Related Name

cloud_storage_paths

Default Value**API Name**

cloud_storage_paths

Required

false

HDFS Service**Description**

Name of the HDFS service that this Ranger service instance depends on

Related Name**Default Value****API Name**

hdfs_service

Required

true

Ranger KMS Keyadmin User Initial Password**Description**

Password for the Ranger administrator, whose login name is "admin". The password should be a minimum of 8 characters long, with at least one upper-case alphabetic character, one lower-case alphabetic character, and one numeric character. The following characters are invalid: " ' \ ` ^ . Note that this password is only used to set up Ranger in the cluster; any subsequent changes are ignored. This password can be changed later from the Ranger Admin UI on the user profile page.

Related Name

keyadmin_user_password

Default Value**API Name**

keyadmin_user_password

Required

true

Load Balancer Address

Description

Load Balancer Address used by clients to access Ranger Admin. Only required when Ranger Admin is running with High Availability. Example: http://load-balancer-host:load-balancer-port.

Related Name

ranger.externalurl

Default Value**API Name**

load_balancer_url

Required

false

Ranger Admin LoadBalancer principal

Description

Additional principal required for Ranger Admin configurations for Ranger Loadbalancer. Provide only the principal bare name and not the full principal with the REALM. eg: If the load-balancer principal configured is load_balancer_principal@EXAMPLE.COM, then value provided should be load_balancer_principal.

Related Name

Ranger Plugin DFS Audit Enabled

Description

Whether DFS audit is enabled.

Related Name

ranger_plugin_hdfs_audit_enabled

Default Value

true

API Name

ranger_plugin_hdfs_audit_enabled

Required

false

Ranger Plugin DFS Audit URL

Description

An absolute URL with no trailing slash should be entered, or leave the value empty. Allows setting up a centralized storage location for Ranger audits. This URL is used as the base for audit directories: all services plugging into Ranger will prepend this URL to their configured path used to store Ranger audits.

Related Name

ranger_plugin_hdfs_audit_url

Default Value

/ranger/audit

API Name

ranger_plugin_hdfs_audit_url

Required

false

Supported Ranger service types for replication**Description**

A comma separated list of Ranger service types that are supported for replication. If null or blank, then every Ranger service type will be considered supported for replication.

Related Name

ranger_replication_supported_service_types

Default Value

hdfs, hive, hbase, tag, adls, s3, gs

API Name

ranger_replication_supported_service_types

Required

false

Ranger Admin User Initial Password**Description**

Password for the Ranger administrator, whose login name is "admin". The password should be a minimum of 8 characters long, with at least one upper-case alphabetic character, one lower-case alphabetic character, and one numeric character. The following characters are invalid: " ' \ ` ´. Note that this password is only used to set up Ranger in the cluster; any subsequent changes are ignored. This password can be changed later from the Ranger Admin UI on the user profile page.

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write URL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Configuration Validator: Role Specific System Group

Description

Whether to suppress configuration warnings produced by the Role Specific System Group configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_process_groupname

Required

true

Suppress Configuration Validator: Role Specific System User**Description**

Whether to suppress configuration warnings produced by the Role Specific System User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_process_username

Required

true

Suppress Configuration Validator: Ranger Tagsync HA Zookeeper Zkroot**Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync HA Zookeeper Zkroot configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger-tagsync.server.ha.zookeeper.zkroot

Required

true

Suppress Configuration Validator: Ranger Usersync HA Zookeeper Zkroot**Description**

Whether to suppress configuration warnings produced by the Ranger Usersync HA Zookeeper Zkroot configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger-ugsync.server.ha.zookeeper.zkroot

Required

true

Suppress Configuration Validator: Exclude Users from Audit Access Tab**Description**

Whether to suppress configuration warnings produced by the Exclude Users from Audit Access Tab configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.accesslogs.exclude.users.list

Required

true

Suppress Configuration Validator: Kerberos Cookie Path

Description

Whether to suppress configuration warnings produced by the Kerberos Cookie Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.admin.kerberos.cookie.path

Required

true

Suppress Configuration Validator: Ranger Admin Database SSL Certificate File

Description

Whether to suppress configuration warnings produced by the Ranger Admin Database SSL Certificate File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.db.ssl.certificatefile

Required

true

Suppress Configuration Validator: Default Policy Groups

Description

Whether to suppress configuration warnings produced by the Default Policy Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.default.policy.groups

Required

true

Suppress Configuration Validator: Default Policy Users

Description

Whether to suppress configuration warnings produced by the Default Policy Users configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.default.policy.users

Required

true

Suppress Configuration Validator: Default HBase Policy Groups

Description

Whether to suppress configuration warnings produced by the Default HBase Policy Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.hbase.default.admin.groups

Required

true

Suppress Configuration Validator: Ranger Admin Keystore File

Description

Whether to suppress configuration warnings produced by the Ranger Admin Keystore File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.keystore.file

Required

true

Suppress Configuration Validator: Ranger Admin Keystore Password

Description

Whether to suppress configuration warnings produced by the Ranger Admin Keystore Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.keystore.password

Required

true

Suppress Configuration Validator: Admin AD Auth Base DN

Description

Whether to suppress configuration warnings produced by the Admin AD Auth Base DN configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.base.dn

Required

true

Suppress Configuration Validator: Admin AD Auth Bind DN

Description

Whether to suppress configuration warnings produced by the Admin AD Auth Bind DN configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.bind.dn

Required

true

Suppress Configuration Validator: Admin AD Auth Domain Name

Description

Whether to suppress configuration warnings produced by the Admin AD Auth Domain Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.domain

Required

true

Suppress Configuration Validator: Admin AD Auth URL

Description

Whether to suppress configuration warnings produced by the Admin AD Auth URL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.url

Required

true

Suppress Configuration Validator: Admin AD Auth User Search Filter

Description

Whether to suppress configuration warnings produced by the Admin AD Auth User Search Filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.user.searchfilter

Required

true

Suppress Configuration Validator: Admin LDAP Auth Base DN

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth Base DN configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.base.dn

Required

true

Suppress Configuration Validator: Admin LDAP Auth Bind User

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth Bind User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.bind.dn

Required

true

Suppress Configuration Validator: Admin LDAP Auth Group Role Attribute

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Role Attribute configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.group.roleattribute

Required

true

Suppress Configuration Validator: Admin LDAP Auth Group Search Base

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Search Base configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.group.searchbase

Required

true

Suppress Configuration Validator: Admin LDAP Auth Group Search Filter

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Search Filter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.group.searchfilter

Required

true

Suppress Configuration Validator: Admin LDAP Auth URL

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth URL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.url

Required

true

Suppress Configuration Validator: Admin LDAP Auth User DN Pattern

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth User DN Pattern configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_ranger.ldap.user.dnpattern

Required
true

Suppress Configuration Validator: Admin LDAP Auth User Search Filter

Description
Whether to suppress configuration warnings produced by the Admin LDAP Auth User Search Filter configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_ranger.ldap.user.searchfilter

Required
true

Suppress Configuration Validator: Ranger Admin TLS/SSL Keystore File Alias

Description
Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Keystore File Alias configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_ranger.service.https.attrib.keystore.keyalias

Required
true

Suppress Configuration Validator: SSO Browser Useragent

Description
Whether to suppress configuration warnings produced by the SSO Browser Useragent configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_ranger.sso.browser.useragent

Required
true

Suppress Configuration Validator: SSO Provider Url

Description

Whether to suppress configuration warnings produced by the SSO Provider Url configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.sso.providerurl

Required

true

Suppress Configuration Validator: SSO Public Key

Description

Whether to suppress configuration warnings produced by the SSO Public Key configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.sso.publickey

Required

true

Suppress Configuration Validator: Tag Service Name

Description

Whether to suppress configuration warnings produced by the Tag Service Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.tagservice.auto.name

Required

true

Suppress Configuration Validator: Capture Cluster name

Description

Whether to suppress configuration warnings produced by the Capture Cluster name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.tagsync.atlas.default.cluster.name

Required

true

Suppress Configuration Validator: Ranger Tagsync Username

Description

Whether to suppress configuration warnings produced by the Ranger Tagsync Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.tagsync.dest.ranger.username

Required

true

Suppress Configuration Validator: Ranger Tagsync TLS/SSL Keystore File Alias

Description

Whether to suppress configuration warnings produced by the Ranger Tagsync TLS/SSL Keystore File Alias configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.tagsync.service.https.attrib.keystore.keyalias

Required

true

Suppress Configuration Validator: File Source: Filename

Description

Whether to suppress configuration warnings produced by the File Source: Filename configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.tagsync.source.file.filename

Required

true

Suppress Configuration Validator: Admin UNIX Auth Service Hostname

Description

Whether to suppress configuration warnings produced by the Admin UNIX Auth Service Hostname configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.unixauth.service.hostname

Required

true

Suppress Configuration Validator: Admin Unix Auth Service Port

Description

Whether to suppress configuration warnings produced by the Admin Unix Auth Service Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.unixauth.service.port

Required

true

Suppress Configuration Validator: Usersync Filesource File Name

Description

Whether to suppress configuration warnings produced by the Usersync Filesource File Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.filesource.file

Required

true

Suppress Configuration Validator: Usersync Filesource Delimiter

Description

Whether to suppress configuration warnings produced by the Usersync Filesource Delimiter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.filesource.text.delimiter

Required

true

Suppress Configuration Validator: Ranger Usersync Group Based Role Assignment Rules

Description

Whether to suppress configuration warnings produced by the Ranger Usersync Group Based Role Assignment Rules configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.based.role.assignment.rules

Required

true

Suppress Configuration Validator: Usersync Group Member Attribute**Description**

Whether to suppress configuration warnings produced by the Usersync Group Member Attribute configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.memberattributename

Required

true

Suppress Configuration Validator: Usersync Group Name Attribute**Description**

Whether to suppress configuration warnings produced by the Usersync Group Name Attribute configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.nameattribute

Required

true

Suppress Configuration Validator: Usersync Group Object Class**Description**

Whether to suppress configuration warnings produced by the Usersync Group Object Class configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.objectclass

Required

true

Suppress Configuration Validator: Usersync Group Search Base

Description

Whether to suppress configuration warnings produced by the Usersync Group Search Base configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.searchbase

Required

true

Suppress Configuration Validator: Usersync Group Search Filter

Description

Whether to suppress configuration warnings produced by the Usersync Group Search Filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.searchfilter

Required

true

Suppress Configuration Validator: Usersync Keystore Password

Description

Whether to suppress configuration warnings produced by the Usersync Keystore Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.keystore.password

Required

true

Suppress Configuration Validator: Usersync Bind User

Description

Whether to suppress configuration warnings produced by the Usersync Bind User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.ldap.binddn

Required

true

Suppress Configuration Validator: Usersync Ldap Group Names

Description

Whether to suppress configuration warnings produced by the Usersync Ldap Group Names configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.groupnames

Required

true

Suppress Configuration Validator: Usersync LDAP/AD URL

Description

Whether to suppress configuration warnings produced by the Usersync LDAP/AD URL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.url

Required

true

Suppress Configuration Validator: Usersync User Name Attribute

Description

Whether to suppress configuration warnings produced by the Usersync User Name Attribute configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.nameattribute

Required

true

Suppress Configuration Validator: Usersync User Object Class

Description

Whether to suppress configuration warnings produced by the Usersync User Object Class configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.objectclass

Required

true

Suppress Configuration Validator: Usersync User Search Base

Description

Whether to suppress configuration warnings produced by the Usersync User Search Base configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.searchbase

Required

true

Suppress Configuration Validator: Usersync User Search Filter

Description

Whether to suppress configuration warnings produced by the Usersync User Search Filter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.searchfilter

Required

true

Suppress Configuration Validator: Ranger Usersync Policymgr Username

Description

Whether to suppress configuration warnings produced by the Ranger Usersync Policymgr Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.policymgr.username

Required

true

Suppress Configuration Validator: Ranger Usersync Unix Service Port

Description

Whether to suppress configuration warnings produced by the Ranger Usersync Unix Service Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.port

Required

true

Suppress Configuration Validator: Ranger Usersync Role Assignment List Delimiter

Description

Whether to suppress configuration warnings produced by the Ranger Usersync Role Assignment List Delimiter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.role.assignment.list.delimiter

Required

true

Suppress Configuration Validator: Ranger Usersync TLS/SSL Keystore File Alias

Description

Whether to suppress configuration warnings produced by the Ranger Usersync TLS/SSL Keystore File Alias configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.service.https.attrib.keystore.keyalias

Required

true

Suppress Configuration Validator: Ranger Usersync Username Groupname Assignment List Delimiter

Description

Whether to suppress configuration warnings produced by the Ranger Usersync Username Groupname Assignment List Delimiter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.username.groupname.assignment.list.delimiter

Required

true

Suppress Configuration Validator: Ranger Usersync User Groups Assignment List Delimiter

Description

Whether to suppress configuration warnings produced by the Ranger Usersync User Groups Assignment List Delimiter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.users.groups.assignment.list.delimiter

Required

true

Suppress Configuration Validator: Ranger Usersync Service User Based Role Assignment Rules

Description

Whether to suppress configuration warnings produced by the Ranger Usersync Service User Based Role Assignment Rules configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.whitelist.users.role.assignment.rules

Required

true

Suppress Configuration Validator: Ranger Admin Client Java Opts

Description

Whether to suppress configuration warnings produced by the Ranger Admin Client Java Opts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_admin_client_java_opts

Required

true

Suppress Configuration Validator: Ranger Admin Conf Path

Description

Whether to suppress configuration warnings produced by the Ranger Admin Conf Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_admin_conf_path

Required

true

Suppress Configuration Validator: Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Ranger Admin Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_admin_role_env_safety_valve

Required

true

Suppress Configuration Validator: Admin AD Auth Bind Password

Description

Whether to suppress configuration warnings produced by the Admin AD Auth Bind Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ldap_ad_bind_password

Required

true

Suppress Configuration Validator: Admin LDAP Auth Bind User Password

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth Bind User Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ldap_bind_password

Required

true

Suppress Configuration Validator: Knox Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Knox Proxy User Groups configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_proxyuser_knox_groups

Required

true

Suppress Configuration Validator: Knox Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Knox Proxy User Hosts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_proxyuser_knox_hosts

Required

true

Suppress Configuration Validator: Knox Proxy User Users

Description

Whether to suppress configuration warnings produced by the Knox Proxy User Users configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_proxyuser_knox_users

Required

false

Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-kms-site.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-kms-site.xml_role_safety_valve

Required

false

Ranger KMS Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Ranger KMS Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

RANGER_KMS_SERVER_role_env_safety_valve

Required

false

Logs**Ranger KMS Server Log Directory****Description**

The log directory for log files of the role Ranger KMS Server.

Related Name

log_dir

Default Value

/var/log/ranger/kms

API Name

log_dir

Required

false

Ranger KMS Server Logging Threshold

Description

The minimum log level for Ranger KMS Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Ranger KMS Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ranger KMS Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Ranger KMS Server Max Log Size

Description

The maximum size, in megabytes, per log file for Ranger KMS Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name`process_swap_memory_thresholds`**Required**

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name`ranger_kms_server_fd_thresholds`**Required**

false

Ranger KMS Server Host Health Test**Description**

When computing the overall Ranger KMS Server health, consider the host's health.

Related Name**Default Value**

	true
API Name	ranger_kms_server_host_health_enabled
Required	false

Ranger KMS Server Process Health Test

Description	Enables the health test that the Ranger KMS Server's process state is consistent with the role configuration
Related Name	
Default Value	true
API Name	ranger_kms_server_scm_health_enabled
Required	false

Role Triggers

Description	<p>The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:</p> <ul style="list-style-type: none"> triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role. triggerExpression (mandatory) - A tsquery expression representing the trigger. streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire. enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated. expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies. <p>For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.</p>

false

Hadoop KMS Authentication Signer Secret Provider**Description**

Indicates how the secret to sign the authentication cookies will be stored. Options are 'random' (default), 'string' and 'zookeeper'. If using a setup with multiple KMS instances, 'zookeeper' should be used.

Related Name

hadoop.kms.authentication.signer.secret.provider

Default Value

random

API Name

hadoop_kms_authentication_signer_secret_provider

Required

false

Hadoop KMS Authentication Signer Secret Provider Zookeeper Auth Type

Description

The Zookeeper authentication type, 'none' or kerberos.

Related Name

hadoop.kms.authentication.signer.secret.provider.zookeeper.auth.type

Default Value

none

API Name

hadoop_kms_authentication_signer_secret_provider_zookeeper_auth_type

Required

false

Hadoop KMS Authentication Signer Secret Provider Zookeeper Path

Description

The Zookeeper ZNode path where the KMS instances will store and retrieve the secret from.

Related Name

hadoop.kms.authentication.signer.secret.provider.zookeeper.path

Default Value

/hadoop-kms/hadoop-auth-signature-secret

API Name

hadoop_kms_authentication_signer_secret_provider_zookeeper_path

Required

false

Hadoop KMS Blacklist Decrypt EEK

Description

Add user which is needed to be blacklist for decrypt EncryptedKey CryptoExtension operations. Multiple list of user's can be added with comma separated.

Related Name

hadoop.kms.blacklist.DECRYPT_EEK

Default Value

hdfs

API Name

hadoop_kms_blacklist_decrypt_eeek

Required

false

Hadoop KMS Cache Enable

Description

Whether the KMS will act as a cache for the backing KeyProvider. When the cache is enabled, operations like getKeyVersion, getMetadata, and getCurrentKey will sometimes return cached data without consulting the backing KeyProvider. Cached values are flushed when keys are deleted or modified.

Related Name

hadoop.kms.cache.enable

Default Value

true

API Name

hadoop_kms_cache_enable

Required

false

Hadoop Kms Cache Timeout In Milliseconds**Description**

Expiry time for the KMS key version and key metadata cache, in milliseconds. This affects getKeyVersion and getMetadata.

Related Name

hadoop.kms.cache.timeout.ms

Default Value

10 minute(s)

API Name

hadoop_kms_cache_timeout_ms

Required

false

Hadoop KMS Current Key Cache Timeout In Milliseconds**Description**

Expiry time for the KMS current key cache, in milliseconds. This affects getCurrentKey operations.

Related Name

hadoop.kms.current.key.cache.timeout.ms

Default Value

30 second(s)

API Name

hadoop_kms_current_key_cache_timeout_ms

Required

false

HDFS Proxy User Groups**Description**

Allows the hdfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hdfs.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hdfs_groups

Required

false

HDFS Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hdfs user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hdfs.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hdfs_hosts

Required

false

Hive Proxy User Groups

Description

Allows the hive superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hive.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hive_groups

Required

false

Hive Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hive user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hive.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hive_hosts

Required

false

HTTP Proxy User Groups

Description

Allows the HTTP superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.HTTP.groups

Default Value

*

API Name

hadoop_kms_proxyuser_HTTP_groups

Required

false

HTTP Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.kms.proxyuser.HTTP.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_HTTP_hosts

Required

false

HttpFS Proxy User Groups

Description

Allows the httpfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.httpfs.groups

Default Value

*

API Name

hadoop_kms_proxyuser_httpfs_groups

Required

false

HttpFS Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the httpfs user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.kms.proxyuser.httpfs.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_httpfs_hosts

Required

false

Hue Proxy User Groups

Description

Allows the hue superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hue.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hue_groups

Required

false

Hue Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hue user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.kms.proxyuser.hue.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hue_hosts

Required

false

Livy Proxy User Groups

Description

Allows the livy superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.livy.groups

Default Value

*

API Name

hadoop_kms_proxyuser_livy_groups

Required

false

Livy Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the livy user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.livy.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_livy_hosts

Required

false

Mapred Proxy User Groups**Description**

Allows the mapred superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.mapred.groups

Default Value

*

API Name

hadoop_kms_proxyuser_mapred_groups

Required

false

Mapred Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the mapred user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.mapred.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_mapred_hosts

Required

false

Oozie Proxy User Groups

Description

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.oozie.groups

Default Value

*

API Name

hadoop_kms_proxyuser_oozie_groups

Required

false

Oozie Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.kms.proxyuser.oozie.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_oozie_hosts

Required

false

Ranger Proxy User Groups

Description

Allows the ranger superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.ranger.groups

Default Value

*

API Name

hadoop_kms_proxyuser_ranger_groups

Required

false

Ranger Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the ranger user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.ranger.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_ranger_hosts

Required

false

Ozone S3 Gateway Proxy User Groups**Description**

Allows the Ozone S3 superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.s3g.groups

Default Value

*

API Name

hadoop_kms_proxyuser_s3g_groups

Required

false

Ozone S3 Gateway Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the Ozone S3 user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.s3g.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_s3g_hosts

Required

false

YARN Proxy User Groups**Description**

Allows the yarn superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.yarn.groups

Default Value

*

API Name

hadoop_kms_proxyuser_yarn_groups

Required

false

YARN Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the yarn user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.yarn.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_yarn_hosts

Required

false

Zeppelin Proxy User Groups

Description

Allows the zeppelin superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.zeppelin.groups

Default Value

*

API Name

hadoop_kms_proxyuser_zeppelin_groups

Required

false

Zeppelin Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the zeppelin user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.zeppelin.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_zeppelin_hosts

Required

false

Hadoop Security Keystore JavaKeyStoreProvider Password

Description

If using the JavaKeyStoreProvider, the password for the keystore file.

Related Name

hadoop.security.keystore.JavaKeyStoreProvider.password

Default Value

API Name

hadoop_security_keystore_javakeystoreprovider_password

Required

false

Ranger KMS Access log Rotation Max Days

Description

The number of days to retain Ranger KMS Access logs before they are automatically rotated.

Related Name

ranger.accesslog.rotate.max.days

Default Value

15

API Name

ranger_accesslog_rotate_max_days

Required

false

Ranger KMS Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/kms/audit/hdfs/spool

API Name

ranger_audit_hdfs_spool_dir

Required

true

Ranger KMS Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/kms/audit/solr/spool

API Name

ranger_audit_solr_spool_dir

Required

true

Azure Client ID

Description

Azure client id is a unique identifier generated by Azure AD that is tied to an application and service principal during its initial provisioning.

Related Name

ranger.kms.azure.client.id

Default Value

API Name

ranger_kms_azure_client_id

Required

false

Azure Client Secret

Description

Azure client secret to authenticate to key vault.

Related Name

ranger.kms.azure.client.secret

Default Value

API Name

ranger_kms_azure_client_secret

Required

false

Azure key vault certificate password

Description

Azure key vault certificate password.

Related Name

ranger.kms.azure.keyvault.certificate.password

Default Value

API Name

ranger_kms_azure_keyvault_certificate_password

Required

false

Azure Key Vault Certificate Path

Description

Azure key vault certificate path.

Related Name

ranger.kms.azure.keyvault.certificate.path

Default Value**API Name**

ranger_kms_azure_keyvault_certificate_path

Required

false

Enable Azure Key Vault SSL**Description**

Azure authentication via certificate or password.

Related Name

ranger.kms.azure.keyvault.ssl.enabled

Default Value

false

API Name

ranger_kms_azure_keyvault_ssl_enabled

Required

false

Azure Master Key Name**Description**

Azure master key name.

Related Name

ranger.kms.azure.masterkey.name

Default Value**API Name**

ranger_kms_azure_masterkey_name

Required

false

Azure Master Key Type**Description**

Select the type for the Master key. Key Vault supports RSA and Elliptic Curve keys.

Related Name

ranger.kms.azure.masterkey.type

Default Value

RSA

API Name

ranger_kms_azure_masterkey_type

Required

false

Azure Zonekey Encryption Algorithm

Description

A supported algorithm for a encryption zone key operation.

Related Name

ranger.kms.azure.zonekey.encryption.algorithm

Default Value

RSA1_5

API Name

ranger_kms_azure_zonekey_encryption_algorithm

Required

false

Enable Azure Key Vault

Description

Whether to enable Azure key vault for secure key management.

Related Name

ranger.kms.azurekeyvault.enabled

Default Value

false

API Name

ranger_kms_azurekeyvault_enabled

Required

false

Azure Key Vault Url

Description

Azure Key Vault url of format "https://{keyvault-name}.vault.azure.net/", where keyvault-name is the name for a key vault in the Microsoft Azure Key Vault service.

Related Name

ranger.kms.azurekeyvault.url

Default Value**API Name**

ranger_kms_azurekeyvault_url

Required

false

Ranger KMS Client Java Opts

Description

These are Java command-line arguments for ranger kms. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name

ranger_kms_client_java_opts

Default Value**API Name**

ranger_kms_client_java_opts

Required

false

Enable Hardware Security Module (HSM) For Ranger KMS (Luna)**Description**

Whether to enable HSM for protection of cryptographic keys.

Related Name

ranger.ks.hsm.enabled

Default Value

false

API Name

ranger_kms_hsm_enabled

Required

false

HSM Partition Name**Description**

Independent logical HSM partition that resides within Luna SA appliance's physical K6 HSM appliances. It manage access controls, security policies and administration access. In case of high availability enter the group name.

Related Name

ranger.ks.hsm.partition.name

Default Value**API Name**

ranger_kms_hsm_partition_name

Required

false

HSM partition password**Description**

Password for securing HSM partition.

Related Name

ranger.ks.hsm.partition.password

Default Value**API Name**

ranger_kms_hsm_partition_password

Required

false

HSM Type**Description**

Select HSM type.

Related Name

ranger.ks.hsm.type

Default Value

LunaProvider

API Name

ranger_kms_hsm_type

Required

false

Enable SafeNet Keysecure For Ranger KMS

Description

Whether to enable Keysecure for secure and centralized key management.

Related Name

ranger.kms.keysecure.enabled

Default Value

false

API Name

ranger_kms_keysecure_enabled

Required

false

SafeNet Keysecure Hostname

Description

Hostname of SafeNet Keysecure.

Related Name

ranger.kms.keysecure.hostname

Default Value

API Name

ranger_kms_keysecure_hostname

Required

false

SafeNet Keysecure Login Password

Description

Login Password for accessing SafeNet Keysecure.

Related Name

ranger.kms.keysecure.login.password

Default Value

API Name

ranger_kms_keysecure_login_password

Required

false

SafeNet Keysecure Login Username

Description

Login Username for accessing SafeNet Keysecure.

Related Name

ranger.kms.keysecure.login.username

Default Value**API Name**

ranger_kms_keysecure_login_username

Required

false

SafeNet Keysecure MasterKey Name**Description**

Enter Keysecure masterkey Name. It is used for encrypting/decrypting zone keys.

Related Name

ranger.kms.keysecure.masterkey.name

Default Value**API Name**

ranger_kms_keysecure_masterkey_name

Required

false

SafeNet Keysecure Masterkey Size**Description**

SafeNet Keysecure Masterkey Size.

Related Name

ranger.kms.keysecure.masterkey.size

Default Value

256

API Name

ranger_kms_keysecure_masterkey_size

Required

false

SafeNet Keysecure Sunpkcs11 cfg Filepath**Description**

SafeNet Keysecure sunpkcs11 cfg filepath.

Related Name

ranger.kms.keysecure.sunpkcs11.cfg.filepath

Default Value**API Name**

ranger_kms_keysecure_sunpkcs11_cfg_filepath

Required

false

Enable SafeNet Keysecure User Password Authentication**Description**

Whether to enable SafeNet Keysecure user password authentication.

Related Name

ranger.kms.keysecure.UserPassword.Authentication

Default Value

false

API Name

ranger_kms_keysecure_userpassword_authentication

Required

false

Ranger KMS KTS Keystore File Keypass

Description

Stores the keypass for Ranger KMS KTS keystore file created while backup.

Related Name

ranger_kms_kts_keystore_keypass

Default Value

API Name

ranger_kms_kts_keystore_keypass

Required

true

Ranger KMS KTS Keystore File Storepass

Description

Stores the storepass for Ranger KMS KTS keystore file created while backup.

Related Name

ranger_kms_kts_keystore_storepass

Default Value

API Name

ranger_kms_kts_keystore_storepass

Required

true

Ranger KMS Master Key Password

Description

Password for Ranger KMS Master Key.

Related Name

ranger.db.encrypt.key.password

Default Value

API Name

ranger_kms_master_key_password

Required

true

Ranger KMS Max Heapsize

Description

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_kms_max_heap_size

Default Value

1 GiB

API Name

ranger_kms_max_heap_size

Required

true

Ranger KMS Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.kms.policy.cache.dir

Default Value

/var/lib/ranger/kms/policy-cache

API Name

ranger_kms_plugin_policy_cache_directory

Required

true

Ranger Kms Server Canary Health Enabled

Description

Ranger Kms Server Canary is enabled/disabled.

Related Name

ranger_kms_server_canary_health_enabled

Default Value

true

API Name

ranger_kms_server_canary_health_enabled

Required

false

Ranger Kms Server Canary Health Timeout

Description

Timeout for Ranger Kms Server Canary health check.

Related Name

ranger_kms_server_canary_health_timeout

Default Value

30 second(s)

API Name

ranger_kms_server_canary_health_timeout

Required

false

Ranger KMS Tomcat Work Dir

Description

Tomcat work directory for Ranger KMS.

Related Name

ranger.tomcat.work.dir

Default Value

/var/lib/ranger/kms/work

API Name

ranger_kms_tomcat_work_dir

Required

true

Ranger KMS DB Auth Type

Description

Ranger database authentication type.

Related Name

ranger.ks.db.ssl.auth.type

Default Value

1-way

API Name

ranger_ks_db_ssl_auth_type

Required

false

Ranger KMS Database SSL Certificate File

Description

Specifies database certificate file location.

Related Name

ranger.ks.db.ssl.certificateFile

Default Value

API Name

ranger_ks_db_ssl_certificateFile

Required

false

Ranger KMS DB SSL Enabled

Description

Ranger KMS database SSL enabled.

Related Name

ranger.ks.db.ssl.enabled

Default Value

false

API Name

ranger_ks_db_ssl_enabled

Required

false

Ranger KMS DB SSL Required

Description

Ranger database SSL required.

Related Name

ranger.ks.db.ssl.required

Default Value

false

API Name

ranger_ks_db_ssl_required

Required

false

Ranger KMS DB SSL Verify Server Certificate

Description

Verify database SSL server certificate.

Related Name

ranger.ks.db.ssl.verifyServerCertificate

Default Value

false

API Name

ranger_ks_db_ssl_verifyServerCertificate

Required

false

Ranger KMS Keystore File

Description

Specifies keystore file for Ranger KMS Server in case of 2-way SSL authentication to SSL enabled database used by Ranger KMS.

Related Name

ranger.ks.keystore.file

Default Value

API Name

ranger_ks_keystore_file

Required

false

Ranger KMS Keystore Password

Description

The password for Ranger KMS keystore file.

Related Name

ranger.ks.keystore.password

Default Value**API Name**

ranger_ks_keystore_password

Required

false

Ranger KMS Truststore File**Description**

Specifies Ranger KMS truststore file location that contains certificate used to sign to the SSL enabled database in case of 1-way SSL authentication.

Related Name

ranger.ks.truststore.file

Default Value**API Name**

ranger_ks_truststore_file

Required

false

Ranger KMS Truststore Password**Description**

The password for Ranger KMS truststore file location.

Related Name

ranger.ks.truststore.password

Default Value**API Name**

ranger_ks_truststore_password

Required

false

Ranger Plugin Trusted Proxy IP Address**Description**

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.kms.trusted.proxy.ipaddress

Default Value**API Name**

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.kms.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Ranger KMS Server TLS/SSL Keystore File Alias

Description

The alias for the Ranger KMS Server TLS/SSL keystore file. User must configure the alias for the Ranger KMS keystore.

Related Name

ranger.service.https.attrib.keystore.keyalias

Default Value**API Name**

ranger_service_https_attrib_keystore_keyalias

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Ranger KMS HTTP Port

Description

HTTP Port for Ranger KMS.

Related Name

ranger.service.http.port

Default Value

9292

API Name

ranger_kms_http_port

Required

false

Ranger KMS HTTPS Port**Description**

HTTPS Port for Ranger KMS. Only used when SSL is enabled for Ranger KMS.

Related Name

ranger.service.https.port

Default Value

9494

API Name

ranger_kms_https_port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

`rm_cpu_shares`**Required**`true`**Cgroup V2 CPU Weight****Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name`cpu.weight`**Default Value**`100`**API Name**`rm_cpu_weight`**Required**`true`**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
These settings override other cgroup settings.

Related Name`custom.cgroups`**Default Value****API Name**`rm_custom_resources`**Required**`false`**Cgroup V2 I/O Weight****Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name`io.weight`**Default Value**`100`**API Name**`rm_io_weight`**Required**`true`

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

`rm_memory_soft_limit_v1`**Required**`true`**Cgroup V2 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.high`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v2`**Required**`true`**Security****Ranger KMS Server TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger KMS Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`xasecure.policymgr.clientssl.truststore`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Ranger KMS Server TLS/SSL Trust Store Password****Description**

The password for the Ranger KMS Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name`xasecure.policymgr.clientssl.truststore.password`**Default Value****API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger KMS Server

Description

Encrypt communication between clients and Ranger KMS Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger KMS Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger KMS Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ranger.service.https.attrib.keystore.file

Default Value

API Name

ssl_server_keystore_location

Required

false

Ranger KMS Server TLS/SSL Server Keystore File Password

Description

The password for the Ranger KMS Server keystore file.

Related Name

ranger.service.https.attrib.keystore.pass

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Parameter Validation: Key Trustee KeyStoreProvider KeyStore Backup Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee KeyStoreProvider KeyStore Backup Directory parameter.

Related Name**Default Value**

false

API Name

Suppress Parameter Validation: Ranger KMS Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_server_role_env_safety_valve

Required

true

Suppress Parameter Validation: Ranger KMS Tomcat Work Dir

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Tomcat Work Dir parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_tomcat_work_dir

Required

true

Suppress Parameter Validation: Ranger KMS Database SSL Certificate File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database SSL Certificate File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ks_db_ssl_certificatefile

Required

true

Suppress Parameter Validation: Ranger KMS Keystore File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Keystore File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ks_keystore_file

Required

true

Suppress Parameter Validation: Ranger KMS Keystore Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Keystore Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ks_keystore_password

Required

true

Suppress Parameter Validation: Ranger KMS Truststore File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Truststore File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ks_truststore_file

Required

true

Suppress Parameter Validation: Ranger KMS Truststore Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Truststore Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ks_truststore_password

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Ranger KMS Server TLS/SSL Keystore File Alias

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server TLS/SSL Keystore File Alias parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_service_https_attrib_keystore_keyalias

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Ranger KMS Server TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Ranger KMS Server TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Ranger KMS Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Ranger KMS Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_otelcol_health

Required

true

Suppress Health Test: Ranger Plugin Hdfs Spool Directory Size**Description**

Whether to suppress the results of the Ranger Plugin Hdfs Spool Directory Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_ranger_plugin_hdfs_spool_directory_size_health

Required

true

Suppress Health Test: Ranger Plugin Solr Spool Directory Size**Description**

Whether to suppress the results of the Ranger Plugin Solr Spool Directory Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_ranger_plugin_solr_pool_directory_size_health

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_kms_ranger_kms_server_unexpected_exits

Required

true

Suppress Health Test: Ranger KMS URL Canary Check

Description

Whether to suppress the results of the Ranger KMS URL Canary Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_kms_server_canary

Required

true

Service-Wide

Advanced

System Group

Description

The group that this service's processes should run as.

Related Name

Default Value

kms

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name**Default Value**

kms

API Name

process_username

Required

true

Ranger KMS Database JDBC Url Override**Description**

Specify JDBC url override for connecting to Ranger KMS database. If not specified, the JDBC url will be calculated on basis of the Ranger KMS database parameters specified.

Related Name

ranger.ks.jpa.jdbc.url

Default Value**API Name**

ranger_kms_database_jdbc_url

Required

false

Ranger KMS Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

RANGER_KMS_service_env_safety_valve

Required

false

Database**Ranger KMS Database Host****Description**

Hostname of the database used by Ranger KMS. If the port is non-default for your database type, use host:port notation.

Related Name

ranger_kms_database_host

Default Value

localhost

API Name

ranger_kms_database_host

Required

false

Ranger KMS Database Name

Description

Name of Ranger KMS database.

Related Name

ranger_kms_database_name

Default Value

rangerkms

API Name

ranger_kms_database_name

Required

false

Ranger KMS Database User Password

Description

Password for Ranger KMS database.

Related Name

ranger.ks.jpa.jdbc.password

Default Value**API Name**

ranger_kms_database_password

Required

true

Ranger KMS Database Port

Description

Port for Ranger KMS database.

Related Name

ranger_kms_database_port

Default Value

5432

API Name

ranger_kms_database_port

Required

true

Ranger KMS Database Type

Description

Database type to be used (postgres).

Related Name

ranger_kms_database_type

Default Value

postgresql

API Name

ranger_kms_database_type

Required

true

Ranger KMS Database User

Description

User for Ranger KMS database.

Related Name

API Name

ranger_kms_database_user

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Healthy Ranger KMS Server Monitoring Thresholds

Description

The health test thresholds of the overall Ranger KMS Server health. The check returns "Concerning" health if the percentage of "Healthy" Ranger KMS Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger KMS Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 49.0 %

API Name

RANGER_KMS_RANGER_KMS_SERVER_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value**

API Name

smon_derived_configs_safety_valve

Required

false

Other**Ranger KMS Authentication Type****Description**

Authentication type for the Ranger KMS. Can either be "simple" or "kerberos".

Related Name

hadoop.kms.authentication.type

Default Value

kerberos

API Name

hadoop_kms_authentication_type

Required

true

Enable Ranger KMS KTS Migration**Description**

Whether Ranger KMS KTS key migration is enabled.

Related Name

ranger.kms.ktsmigration.enabled

Default Value

false

API Name

ranger_kms_kts_migration

Required

false

Ranger KMS Load Balancer**Description**

Only required when Ranger KMS is running with High Availability.

Related Name

ranger_kms_load_balancer

Default Value**API Name**

ranger_kms_load_balancer

Required

false

Ranger KMS Plugin Hdfs Audit Directory**Description**

The DFS path on which Ranger audits are written.

Related Name

ranger_kms_plugin_hdfs_audit_directory

Default Value

\$ranger_base_audit_url/kms

API Name

ranger_kms_plugin_hdfs_audit_directory

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Ranger KMS service instance depends on

Related Name

Default Value

API Name

true

Suppress Configuration Validator: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml

Description

Whether to suppress configuration warnings produced by the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_conf/ranger-kms-site.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Hadoop KMS Authentication Signer Secret Provider Zookeeper Path

Description

Whether to suppress configuration warnings produced by the Hadoop KMS Authentication Signer Secret Provider Zookeeper Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_authentication_signer_secret_provider_zookeeper_path

Required

true

Suppress Configuration Validator: Hadoop KMS Blacklist Decrypt EEK

Description

Whether to suppress configuration warnings produced by the Hadoop KMS Blacklist Decrypt EEK configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_blacklist_decrypt_eeek

Required

true

Suppress Configuration Validator: HDFS Proxy User Groups

Description

Whether to suppress configuration warnings produced by the HDFS Proxy User Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_hdfs_groups

Required

true

Suppress Configuration Validator: HDFS Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the HDFS Proxy User Hosts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_hdfs_hosts

Required

true

Suppress Configuration Validator: Hive Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Hive Proxy User Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_hive_groups

Required

true

Suppress Configuration Validator: Hive Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Hive Proxy User Hosts configuration validator.

Ranger Raz Properties in Cloudera Runtime 7.3.1

Role groups:

Ranger Raz Server

Advanced

Ranger Raz Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/hadoop-metrics2.properties**Description**

For advanced use only. A string to be inserted into ranger-raz-conf/hadoop-metrics2.properties for this role only.

Related Name**Default Value****API Name**

ranger-raz-conf/hadoop-metrics2.properties_role_safety_valve

Required

false

Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-audit.xml**Description**

For advanced use only. A string to be inserted into ranger-raz-conf/ranger-raz-audit.xml for this role only.

Related Name**Default Value****API Name**

ranger-raz-conf/ranger-raz-audit.xml_role_safety_valve

Required

false

Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-policymgr-ssl.xml**Description**

Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-site.xml

Description

For advanced use only. A string to be inserted into ranger-raz-conf/ranger-raz-site.xml for this role only.

Related Name

Default Value

API Name

ranger-raz-conf/ranger-raz-site.xml_role_safety_valve

Required

false

Ranger Raz Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

RANGER_RAZ_SERVER_role_env_safety_valve

Required

false

Logs

Ranger Raz Server Log Directory

Description

The log directory for log files of the role Ranger Raz Server.

Related Name

ranger.raz.log.dir

Default Value

/var/log/ranger/raz

API Name

log_dir

Required

false

Ranger Raz Server Logging Threshold**Description**

The minimum log level for Ranger Raz Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Ranger Raz Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Ranger Raz Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Ranger Raz Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Ranger Raz Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name

Default Value

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name

Default Value

API Name

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.

- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

`exporters: prometheusremotewrite/$ROLE_NAME: endpoint: $ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls: insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s max_elapsed_time: 300s`

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

`extensions: basicauth/$ROLE_NAME: client_auth: username: $ROLE_PARAM(otelcol_remote_write_user) password: '$ROLE_PARAM(otelcol_remote_write_password)'`

API Name

`otelcol_extensions`

Required

`false`

OpenTelemetry Collector Helper Port

Description

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name

Default Value**API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: `$HOST_NAME`, `$CLUSTER_NAME`, `$CLUSTER_ID`, `$SERVICE_TYPE`, `$SERVICE_NAME`, `$ROLE_NAME`, `$ROLE_TYPE`, `$ROLE_PARAM(my_parameter_name)` - e.g.: a port parameter for the role's metrics, `$DECODE_B64(...)` and `$DECODE_URL(...)` to decode encoded parameters, `$ENV_PARAM(name)` to fetch params from the process' environment, `$SYS_PARAM(name)` to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_password)` expression. Specify `$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name

Required

false

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_raz_server_fd_thresholds

Required

false

Ranger Raz Server Host Health Test

Description

When computing the overall Ranger Raz Server health, consider the host's health.

Related Name**Default Value**

true

API Name

ranger_raz_server_host_health_enabled

Required

false

Ranger Raz Server Process Health Test**Description**

Enables the health test that the Ranger Raz Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ranger_raz_server_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

ranger.raz.tag.rest.supports.tag.deltas

Required

false

Ranger Raz User Store Refresher Polling Interval

Description

Time interval to poll user store configs.

Related Name

ranger.raz.userStoreRefresherPollingInterval

Default Value

30 second(s)

API Name

ranger.raz.userStoreRefresherPollingInterval

Required

false

Ranger Raz Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/ranger-raz/audit/hdfs/spool

API Name

ranger_audit_hdfs_spool_dir

Required

true

Ranger Raz Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/ranger-raz/audit/solr/spool

API Name

ranger_audit_solr_spool_dir

Required

true

Ranger RAZ Access log Rotation Max Days**Description**

The number of days to retain Ranger RAZ Access logs before they are automatically rotated.

Related Name

ranger.raz.accesslog.rotate.max.days

Default Value

15

API Name

ranger_raz_accesslog_rotate_max_days

Required

false

Ranger Raz Azure Storage Accounts**Description**

A comma-separated list of storage accounts from which user delegation keys will be created, cached, and renewed.

Related Name

ranger.raz.azure.storage.accounts

Default Value**API Name**

ranger_raz_azure_storage_accounts

Required

false

Ranger Raz Canary Health Enabled**Description**

Ranger Raz Canary is enabled/disabled

Related Name

Ranger Raz Tomcat Work Dir

Description

Tomcat work directory for Ranger Raz.

Related Name

ranger.raz.tomcat.work.dir

Default Value

/var/lib/ranger/ranger-raz/work

API Name

ranger_raz_tomcat_work_dir

Required

true

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Raz HTTP Port****Description**

The HTTP port for Ranger Raz.

Related Name

ranger.raz.service.http.port

Default Value

6081

API Name

ranger_raz_service_http_port

Required

false

Raz HTTPS Port**Description**

The HTTPS port for Ranger Raz.

Related Name

ranger.raz.service.https.port

Default Value

6082

API Name

ranger_raz_service_https_port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command:

resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no

limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

Required

true

Security

Ranger Raz Server TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Raz Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

xasecure.policymgr.clientsssl.truststore

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ranger Raz Server TLS/SSL Trust Store Password

Description

The password for the Ranger Raz Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger Raz Server

Description

Encrypt communication between clients and Ranger Raz Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger.raz.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger Raz Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Raz Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ranger.raz.service.https.attrib.keystore.file

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ranger Raz Server TLS/SSL Server Keystore File Password**Description**

The password for the Ranger Raz Server keystore file.

Related Name

ranger.raz.service.https.attrib.keystore.pass

Default Value**API Name**

ssl_server_keystore_password

Required

false

SSL/TLS Cipher Suite**Description**

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

Related Name

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Healthy Ranger Raz Server Monitoring Thresholds

Description

The health test thresholds of the overall Ranger Raz Server health. The check returns "Concerning" health if the percentage of "Healthy" Ranger Raz Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger Raz Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 49.0 %

API Name

RANGER_RAZ_RANGER_RAZ_SERVER_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Configuration Validator: Raz Kerberos Cookie Path

Description

Whether to suppress configuration warnings produced by the Raz Kerberos Cookie Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.raz.auth.method.dt.params.cookie.path

Required

true

Suppress Configuration Validator: Ranger Raz JWKS Provider Url**Description**

Whether to suppress configuration warnings produced by the Ranger Raz JWKS Provider Url configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.raz.auth.method.dt.params.jwks.provider-url

Required

true

Suppress Configuration Validator: Ranger Raz JWT Audiences**Description**

Whether to suppress configuration warnings produced by the Ranger Raz JWT Audiences configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.raz.auth.method.dt.params.jwt.audiences

Required

true

Suppress Configuration Validator: Raz Kerberos Name Rules**Description**

Whether to suppress configuration warnings produced by the Raz Kerberos Name Rules configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.raz.auth.method.dt.params.kerberos.name.rules

Required

true

Suppress Configuration Validator: Raz Policy Cache Directory**Description**

Whether to suppress configuration warnings produced by the Raz Policy Cache Directory configuration validator.

Related Name**Default Value**

false

API Name
role_config_suppression_ranger.raz.policy.cache.dir

Required
true

Suppress Configuration Validator: Ranger RAZ Server TLS/SSL Keystore File Alias

Description
Whether to suppress configuration warnings produced by the Ranger RAZ Server TLS/SSL Keystore File Alias configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_ranger.raz.service.https.attrib.keystore.keyalias

Required
true

Suppress Configuration Validator: Ranger Raz Plugin Audit Hdfs Spool Directory Path

Description
Whether to suppress configuration warnings produced by the Ranger Raz Plugin Audit Hdfs Spool Directory Path configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_ranger_audit_hdfs_spool_dir

Required
true

Suppress Configuration Validator: Ranger Raz Plugin Audit Solr Spool Directory Path

Description
Whether to suppress configuration warnings produced by the Ranger Raz Plugin Audit Solr Spool Directory Path configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_ranger_audit_solr_spool_dir

Required
true

Suppress Configuration Validator: Ranger Raz Azure Storage Accounts

Description

Whether to suppress configuration warnings produced by the Ranger Raz Azure Storage Accounts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_raz_azure_storage_accounts

Required

true

Suppress Configuration Validator: Ranger RAZ Client Java Opts

Description

Whether to suppress configuration warnings produced by the Ranger RAZ Client Java Opts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_raz_client_java_opts

Required

true

Suppress Configuration Validator: Ranger Raz Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Raz Plugin Policy Cache Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_raz_plugin_policy_cache_directory

Required

true

Suppress Configuration Validator: Hive Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Hive Proxy User Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_raz_proxyuser_hive_groups

Required

true

Suppress Configuration Validator: Hive Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Hive Proxy User Hosts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_raz_proxyuser_hive_hosts

Required

true

Suppress Configuration Validator: Httpfs Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Httpfs Proxy User Groups configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_raz_proxyuser_httpfs_groups

Required

true

Suppress Configuration Validator: Httpfs Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Httpfs Proxy User Hosts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_raz_proxyuser_httpfs_hosts

Required

true

Suppress Configuration Validator: Hue Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Hue Proxy User Groups configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_raz_proxyuser_hue_groups

Required

true

Suppress Configuration Validator: Hue Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Hue Proxy User Hosts configuration validator.

Related Name

Suppress Configuration Validator: Raz HTTP Port

Description

Whether to suppress configuration warnings produced by the Raz HTTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_raz_service_http_port

Required

true

Suppress Configuration Validator: Raz HTTPS Port

Description

Whether to suppress configuration warnings produced by the Raz HTTPS Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_raz_service_https_port

Required

true

Suppress Configuration Validator: Ranger Raz Tomcat Work Dir

Description

Whether to suppress configuration warnings produced by the Ranger Raz Tomcat Work Dir configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_raz_tomcat_work_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Ranger Raz Server TLS/SSL Trust Store File**Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server TLS/SSL Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Ranger Raz Server TLS/SSL Trust Store Password**Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Ranger Raz Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Ranger Raz Server TLS/SSL Server Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Ranger Raz Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Ranger Raz Server TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Raz Plugin Hdfs Audit Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Plugin Hdfs Audit Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_raz_plugin_hdfs_audit_directory

Required

true

Suppress Configuration Validator: Ranger Raz Server Count Validator

Description

Whether to suppress configuration warnings produced by the Ranger Raz Server Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_raz_server_count_validator

Required

true

Suppress Parameter Validation: Ranger Raz Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_raz_service_env_safety_valve

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Ranger Raz Server Health

Description

Whether to suppress the results of the Ranger Raz Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_ranger_raz_ranger_raz_server_healthy

Required

true

Ranger RMS Properties in Cloudera Runtime 7.3.1

Role groups:

Ranger RMS Server

Advanced

Ranger RMS Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/hadoop-metrics2.properties

Description

For advanced use only. A string to be inserted into ranger-rms-conf/hadoop-metrics2.properties for this role only.

Related Name

Default Value

API Name

ranger-rms-conf/hadoop-metrics2.properties_role_safety_valve

Required

false

Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-policymgr-ssl.xml

Description

For advanced use only. A string to be inserted into ranger-rms-conf/ranger-rms-policymgr-ssl.xml for this role only.

Related Name

Default Value

API Name

ranger-rms-conf/ranger-rms-policymgr-ssl.xml_role_safety_valve

Required

false

Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-site.xml

Description

For advanced use only. A string to be inserted into ranger-rms-conf/ranger-rms-site.xml for this role only.

Related Name

Default Value

API Name

ranger-rms-conf/ranger-rms-site.xml_role_safety_valve

Required

false

Ranger RMS Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment.
Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

RANGER_RMS_SERVER_role_env_safety_valve

Required

false

Logs**Ranger RMS Server Log Directory****Description**

The log directory for log files of the role Ranger RMS Server.

Related Name

ranger-rms.log.dir

Default Value

/var/log/ranger/rms

API Name

log_dir

Required

false

Ranger RMS Server Logging Threshold**Description**

The minimum log level for Ranger RMS Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Ranger RMS Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Ranger RMS Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Ranger RMS Server Max Log Size

Description

The maximum size, in megabytes, per log file for Ranger RMS Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name

Default Value

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name

Default Value

API Name

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

otelcol_exporters

Required

false

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

extensions: basicauth/\$ROLE_NAME: client_auth: username:
\$ROLE_PARAM(otelcol_remote_write_user) password:
'\$ROLE_PARAM(otelcol_remote_write_password)'

API Name

otelcol_extensions

Required

false

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value****API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_password)` expression. Specify `$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL**Description**

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_url)` expression. Specify `$INFRA(cdp_request_signer_url)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**`$INFRA(cdp_request_signer_url)`**API Name**

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username**Description**

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_user)` expression. Specify `$INFRA(cdp_request_signer_username)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**`$INFRA(cdp_request_signer_username)`**API Name**

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_exporters

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_extensions

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_processors

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name

Default Value

API Name

otelcol_rtm_logs_receivers

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_service

Required

false

OpenTelemetry Collector Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_rms_server_fd_thresholds

Required

false

Ranger RMS Server Host Health Test

Description

When computing the overall Ranger RMS Server health, consider the host's health.

Related Name**Default Value**

true

API Name

ranger_rms_server_host_health_enabled

Required

false

Ranger RMS Server Process Health Test

Description

Enables the health test that the Ranger RMS Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ranger_rms_server_scm_health_enabled

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Ranger RMS JWKS Provider Url

Description

The `{{JWKS_PROVIDER_URL}}` is a placeholder value which will be replaced with the IDBroker endpoint to get JWKS (JSON Web Key Set) when present in the cluster. The placeholder can be replaced to have custom JWKS provider url endpoint.

Related Name

ranger-rms.auth.method.dt.params.jwks.provider-url

Default Value

JWKS_PROVIDER_URL

API Name

ranger-rms.auth.method.dt.params.jwks.provider-url

Required

false

Ranger RMS JWT Audiences

Description

List of comma separated audiences whose claims are supported by Ranger RMS service.

Related Name

ranger-rms.auth.method.dt.params.jwt.audiences

Default Value

idbroker, rms

API Name

ranger-rms.auth.method.dt.params.jwt.audiences

Required

false

Ranger RMS Server TLS/SSL Keystore File Alias

Description

The alias for the Ranger RMS Server TLS/SSL keystore file. User must configure the alias for the Ranger RMS keystore.

Related Name

ranger-rms.service.https.attrib.keystore.keyalias

Default Value**API Name**

ranger-rms.service.https.attrib.keystore.keyalias

Required

false

Ranger RMS Access log Rotation Max Days

Description

The number of days to retain Ranger RMS Access logs before they are automatically rotated.

Related Name

ranger-rms.accesslog.rotate.max.days

Default Value

15

API Name

ranger-rms_accesslog_rotate_max_days

Required

false

Ranger RMS Client Java Opts**Description**

These are Java command-line arguments for ranger rms. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name

ranger_rms_client_java_opts

Default Value**API Name**

ranger_rms_client_java_opts

Required

false

Enable Mapping Hive Managed Tables**Description**

Ranger RMS, by default keeps track of external Hive table locations maintained in Hive Metastore. If Hive managed tables also need to be tracked, then enable this configuration.

Related Name

ranger-rms.HMS.map.managed.tables

Default Value

false

API Name

ranger_rms_hms_map_managed_tables

Required

false

Ranger RMS Hive Metastore Source Service Name**Description**

Hdfs plugin service name managed in Ranger Admin. RMS needs to associate the HDFS locations with this service name before starting. Along with "Ranger RMS Hive Metastore Target Service Name" parameter, RMS will be able to map HMS data to RMS entities and persist them in RMS database. The default value points to default Hdfs plugin service name that gets created as a part of Ranger service installation from Cloudera Manager. Need to update the parameter value if using different Hdfs plugin service name in Ranger Admin.

Related Name

ranger-rms.HMS.source.service.name

Default Value

cm_hdfs

API Name

ranger_rms_hms_source_service_name

Required

false

Ranger RMS Hive Metastore Source Service Name for Ozone**Description**

Ozone plugin service name managed in Ranger Admin. RMS needs to associate the OZONE locations with this service name before starting. Along with "Ranger RMS Hive Metastore Target Service Name" parameter, RMS will be able to map HMS data to Ozone entities and persist them in RMS database. The default value points to default Ozone plugin service name that gets created as a part of Ranger service installation from Cloudera Manager. Need to update the parameter value if using different Ozone plugin service name in Ranger Admin.

Related Name

ranger-rms.HMS.source.service.name.ozone

Default Value

cm_ozone

API Name

ranger_rms_hms_source_service_name_ozone

Required

false

Ranger RMS Hive Metastore Target Service Name**Description**

Hive plugin service name managed in Ranger Admin. RMS need to associate the Hive tables with this service name before starting. The default value points to default Hive plugin service name that gets created as a part of Ranger service installation from Cloudera Manager. Need to update the parameter value if using different Hive plugin service name in Ranger Admin.

Related Name

ranger-rms.HMS.target.service.name

Default Value

cm_hive

API Name

ranger_rms_hms_target_service_name

Required

false

Ranger RMS Max Heapsize**Description**

Maximum size for the Java process heap. Passed to Java -Xmx.

Related Name

ranger_rms_max_heap_size

Default Value

1 GiB

API Name

ranger_rms_max_heap_size

Required

true

Ranger RMS Polling Notifications Frequency

Description

Polling notifications frequency in milliseconds for Ranger RMS.

Related Name

ranger-rms.polling.notifications.frequency.ms

Default Value

30 second(s)

API Name

ranger_rms_polling_notifications_frequency_ms

Required

false

Ranger RMS Server HA

Description

Enable High availability for Ranger RMS server.

Related Name

ranger-rms.server.ha.enabled

Default Value

false

API Name

ranger_rms_server_ha_enabled

Required

false

Ranger RMS HA Zookeeper ACL

Description

Zookeeper ACL for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.acl

Default Value

auth:

API Name

ranger_rms_server_ha_zookeeper_acl

Required

false

Ranger RMS Server Zookeeper ACL Auth

Description

Zookeeper ACL Auth for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.auth

Default Value

API Name

ranger_rms_server_ha_zookeeper_acl_auth

Required

false

Ranger RMS Server HA Zookeeper Num Retries**Description**

Number of retries to connect zookeeper for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.num.retries

Default Value

3

API Name

ranger_rms_server_ha_zookeeper_num_retries

Required

false

Ranger RMS Server HA Zookeeper Retry Sleptime**Description**

Zookeeper retry sleptime in milliseconds for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.retry.sleptime.ms

Default Value

1 second(s)

API Name

ranger_rms_server_ha_zookeeper_retry_sleptime_ms

Required

false

Ranger RMS Server HA Zookeeper Session Timeout**Description**

Zookeeper session timeout in milliseconds for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.session.timeout.ms

Default Value

20 second(s)

API Name

ranger_rms_server_ha_zookeeper_session_timeout_ms

Required

false

Ranger RMS Server HA Zookeeper Zkroot**Description**

Zookeeper Zkroot for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.zkroot

Default Value

/ranger-rms

API Name

ranger_rms_server_ha_zookeeper_zkroot

Required

false

Ranger RMS Server IDs

Description

Ranger RMS Server IDs.

Related Name

ranger-rms.server.ids

Default Value

API Name

ranger_rms_server_ids

Required

false

Ranger RMS Supported Uri Scheme

Description

Hive service storage type used to store Hive's tables.

Related Name

ranger-rms.supported.uri.scheme

Default Value

hdfs, o3fs, ofs

API Name

ranger_rms_supported_uri_scheme

Required

false

Ranger RMS Tomcat Work Dir

Description

Tomcat work directory for Ranger RMS.

Related Name

ranger-rms.tomcat.work.dir

Default Value

/var/lib/ranger/ranger-rms/work

API Name

ranger_rms_tomcat_work_dir

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**RMS HTTP Port****Description**

The HTTP port for Ranger RMS.

Related Name

ranger-rms.service.http.port

Default Value

8383

API Name

ranger_rms_service_http_port

Required

false

RMS HTTPS Port**Description**

The HTTPS port for Ranger RMS.

Related Name

ranger-rms.service.https.port

Default Value

8484

API Name

ranger_rms_service_https_port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

`rm_custom_resources`**Required**`false`**Cgroup V2 I/O Weight****Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name`io.weight`**Default Value**`100`**API Name**`rm_io_weight`**Required**`true`**Cgroup V1 Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit_v1`**Required**`true`**Cgroup V2 Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.max`**Default Value**`-1 MiB`

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Ranger RMS Server TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger RMS Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ranger-rms.truststore.file

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ranger RMS Server TLS/SSL Trust Store Password**Description**

The password for the Ranger RMS Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ranger-rms.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger RMS Server**Description**

Encrypt communication between clients and Ranger RMS Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger-rms.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger RMS Server TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger RMS Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ranger-rms.service.https.attrib.keystore.file

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ranger RMS Server TLS/SSL Server Keystore File Password

Description

The password for the Ranger RMS Server keystore file.

Related Name

ranger-rms.service.https.attrib.keystore.pass

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

`stacks_collection_enabled`**Default Value**`false`**API Name**`stacks_collection_enabled`**Required**`true`

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name`stacks_collection_frequency`**Default Value**`5.0 second(s)`**API Name**`stacks_collection_frequency`**Required**`false`

Stacks Collection Method

Description

The method used to collect stacks. The `jstack` option involves periodically running the `jstack` command against the role's daemon process. The `servlet` method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the `servlet` method is selected, that HTTP endpoint is periodically scraped.

Related Name`stacks_collection_method`**Default Value**`jstack`**API Name**`stacks_collection_method`**Required**`false`

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**`false`**API Name**

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**

false

API Name

false

API Name

role_config_suppression_ranger_rms_supported_uri_scheme

Required

true

Suppress Parameter Validation: Ranger RMS Tomcat Work Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Tomcat Work Dir parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_rms_tomcat_work_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

	false
API Name	role_config_suppression_role_triggers
Required	true

Suppress Parameter Validation: Ranger RMS Server TLS/SSL Trust Store File

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server TLS/SSL Trust Store File parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_ssl_client_truststore_location
Required	true

Suppress Parameter Validation: Ranger RMS Server TLS/SSL Trust Store Password

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server TLS/SSL Trust Store Password parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_ssl_client_truststore_password
Required	true

Suppress Parameter Validation: Ranger RMS Server TLS/SSL Server Keystore File Location

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server TLS/SSL Server Keystore File Location parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_ssl_server_keystore_location
Required	true

Suppress Parameter Validation: Ranger RMS Server TLS/SSL Server Keystore File Password

Description	
--------------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_rms_ranger_rms_server_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_rms_ranger_rms_server_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_rms_ranger_rms_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_rms_ranger_rms_server_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_rms_ranger_rms_server_otelcol_health

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_rms_ranger_rms_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_rms_ranger_rms_server_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_rms_ranger_rms_server_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_rms_ranger_rms_server_unexpected_exits

Required

true

Service-Wide

Advanced

System Group

Description

The group that this service's processes should run as.

Related Name

Default Value

ranger

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Ranger RMS Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

RANGER_RMS_service_env_safety_valve

Required

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Healthy Ranger RMS Server Monitoring Thresholds

Description

The health test thresholds of the overall Ranger RMS Server health. The check returns "Concerning" health if the percentage of "Healthy" Ranger RMS Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger RMS Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 49.0 %

API Name

RANGER_RMS_RANGER_RMS_SERVER_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Required	true

Suppress Health Test: Ranger RMS Server Health

Description	Whether to suppress the results of the Ranger RMS Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	false
API Name	service_health_suppression_ranger_rms_ranger_rms_server_healthy
Required	true

S3 Connector Properties in Cloudera Runtime 7.3.1

Role groups:

Service-Wide

Advanced

S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve)

Description	For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.
Related Name	

Default Value**API Name**

AWS_S3_service_env_safety_valve

Required

false

Default S3 Endpoint**Description**

Optional, default endpoint used by CDH services accessing S3, indicating the AWS region. To see a list of valid values for this parameter please consult [AWS Regions and Endpoints for S3](#): use one of the values listed in the 'Endpoint' column, eg. 's3.us-east-2.amazonaws.com'. When not specified the endpoint used is s3.amazonaws.com

Related Name

fs.s3a.endpoint

Default Value**API Name**

s3_endpoint

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Cloud Account Name****Description**

Name of an AWS account. The associated AWS keys are emitted to Hue, Impala and the Hive Metastore Server.

Related Name**Default Value****API Name**

cloud_account

Required

true

Security

Credentials Protection Policy

Description

Determines a security policy for the distribution of AWS account credentials to cluster services. 'More Secure': Encrypted at all times and directly available to a limited set of services. 'Less Secure': Credentials may be in plain text in some configuration files for specific services in the cluster. When IAM profiles are used, credentials are externally managed in AWS and there are no AWS credentials in any configuration files, so this setting is not applicable.

Related Name**Default Value**

SECURE

API Name

key_distribution_policy

Required

true

Suppressions

Suppress Parameter Validation: S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_aws_s3_service_env_safety_valve

Required

true

Suppress Parameter Validation: Default S3 Endpoint

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default S3 Endpoint parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_s3_endpoint

Required

true

Suppress Configuration Validator: S3Guard CDH Validator

Description

Whether to suppress configuration warnings produced by the S3Guard CDH Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_s3guard_unsupported_cdh_validator

Required

true

Schema Registry Properties in Cloudera Runtime 7.3.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name

Default Value

/etc/schemaregistry

API Name

client_config_root_dir

Required

true

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

50

API Name

client_config_priority

Required

true

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Schema Registry Server**Advanced****Schema Registry Server Advanced Configuration Snippet (Safety Valve) for atlas-application.properties****Description**

For advanced use only. A string to be inserted into atlas-application.properties for this role only.

Related Name

Default Value**API Name**

atlas-application.properties_role_safety_valve

Required

false

Schema Registry Server XML Override**Description**

For advanced use only, replace entire XML in the logback configuration file for Schema Registry Server, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value**API Name**

logback_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-audit.xml**Description**

For advanced use only. A string to be inserted into ranger-schema-registry-audit.xml for this role only.

Related Name**Default Value****API Name**

ranger-schema-registry-audit.xml_role_safety_valve

Required

false

Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-policymgr-ssl.xml**Description**

For advanced use only. A string to be inserted into ranger-schema-registry-policymgr-ssl.xml for this role only.

Related Name**Default Value****API Name**

ranger-schema-registry-policymgr-ssl.xml_role_safety_valve

Required

false

Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-security.xml**Description**

For advanced use only. A string to be inserted into ranger-schema-registry-security.xml for this role only.

Related Name**Default Value****API Name**

ranger-schema-registry-security.xml_role_safety_valve

Required

false

Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml**Description**

For advanced use only. A string to be inserted into registry.yaml for this role only.

Related Name**Default Value****API Name**

registry.yaml_role_safety_valve

Required

false

Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

SCHEMA_REGISTRY_SERVER_role_env_safety_valve

Required

false

Logs

Schema Registry Server Log Directory

Description

The log directory for log files of the role Schema Registry Server.

Related Name

log_dir

Default Value

/var/log/schemaregistry

API Name

log_dir

Required

false

Schema Registry Server Logging Threshold

Description

The minimum log level for Schema Registry Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Schema Registry Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Schema Registry Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Schema Registry Server Max Log Size

Description

The maximum size, in megabytes, per log file for Schema Registry Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

`exporters: prometheusremotewrite/$ROLE_NAME: endpoint: $ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls: insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s max_elapsed_time: 300s`

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

`extensions: basicauth/$ROLE_NAME: client_auth: username: $ROLE_PARAM(otelcol_remote_write_user) password: '$ROLE_PARAM(otelcol_remote_write_password)'`

API Name

`otelcol_extensions`

Required

`false`

OpenTelemetry Collector Helper Port

Description

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value****API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password

Description

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify \$INFRA(cdp_request_signer_password) when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Default Value

local

API Name

schema.registry.jar.storage.type

Required

false

Oracle TLS javax.net.ssl.keyStore

Description

Path to keystore file if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.keyStore

Default Value

API Name

schema.registry.javax.net.ssl.keyStore

Required

false

Oracle TLS javax.net.ssl.keyStorePassword

Description

KeyStorePassword if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.keyStorePassword

Default Value

API Name

schema.registry.javax.net.ssl.keyStorePassword

Required

false

Oracle TLS javax.net.ssl.keyStoreType

Description

KeyStoreType type if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.keyStoreType

Default Value

API Name

schema.registry.javax.net.ssl.keyStoreType

Required

false

Oracle TLS javax.net.ssl.trustStore

Description

Required Path to truststore file if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.trustStore

Default Value

API Name

schema.registry.javax.net.ssl.trustStore

Required

false

Oracle TLS javax.net.ssl.trustStorePassword

Description

TrustStorePassword type if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.trustStorePassword

Default Value

API Name

schema.registry.javax.net.ssl.trustStorePassword

Required

false

Oracle TLS javax.net.ssl.trustStoreType

Description

Required Truststore type if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.trustStoreType

Default Value**API Name**

schema.registry.javax.net.ssl.trustStoreType

Required

false

Java Home Path Override**Description**

Java home path override for Schema Registry.

Related Name

schema.registry.jdk.home

Default Value**API Name**

schema.registry.jdk.home

Required

false

Schema Registry Kerberos Name Rules**Description**

Kerberos name rules for Schema Registry. If left empty, the cluster wide rules will be applied.

Related Name

schema.registry.kerberos.name.rules

Default Value**API Name**

schema.registry.kerberos.name.rules

Required

false

Schema Registry Kerberos Non Browser User Agents**Description**

Non browser user agents if kerberos is enabled.

Related Name

schema.registry.kerberos.non.browser.user.agents

Default Value**API Name**

schema.registry.kerberos.non.browser.user.agents

Required

false

Schema Registry Kerberos User Group Cache Expiration Time**Description**

Kerberos user and group cache expiration time.

Related Name

schema.registry.kerberos.user.group.cache.expiration.ms

Default Value

5 minute(s)

API Name

schema.registry.kerberos.user.group.cache.expiration.ms

Required

false

Schema Registry MaxRequestHeaderSize

Description

Maximum Request Header Size for the Schema Registry, in KiB.

Related Name

schema.registry.maxRequestHeaderSize

Default Value

8

API Name

schema.registry.maxRequestHeaderSize

Required

false

OAuth2 Clock Skew

Description

Allows a certain difference between the clock of the server issuing the token and the clock where Schema Registry is running. They might not be in sync with each other.

Related Name

schema.registry.oauth.clock.skew

Default Value

API Name

schema.registry.oauth.clock.skew

Required

false

OAuth Enabled

Description

Enables OAuth2 authentication.

Related Name

schema.registry.oauth.enabled

Default Value

false

API Name

schema.registry.oauth.enabled

Required

false

OAuth2 JWK Server Login Basic Password

Description

If the JSON Web Key (JWK) server requires Basic Authentication, then you provide the password.

Related Name

schema.registry.oauth.jwks.httpClient.basic.password

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.basic.password

Required

false

OAuth2 JWK Server Login Basic User**Description**

If the JSON Web Key (JWK) server requires Basic Authentication, then you provide the username.

Related Name

schema.registry.oauth.jwks.httpClient.basic.user

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.basic.user

Required

false

OAuth2 JWK Server Key Manager Factory Algorithm**Description**

Schema Registry algorithm of KeyManagerFactory for HTTP client used for JWK OAuth2. You might require it when the keystore type is 'jwk'.

Related Name

schema.registry.oauth.jwks.httpClient.keyManagerFactoryAlgorithm

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.keyManagerFactoryAlgorithm

Required

false

OAuth2 JWK Server Key Manager Factory Provider**Description**

Schema Registry KeyManagerFactory provider for HTTP client used for JWK OAuth2. You might require it when the keystore type is 'jwk'.

Related Name

schema.registry.oauth.jwks.httpClient.keyManagerFactoryProvider

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.keyManagerFactoryProvider

Required

false

OAuth2 JWK Server Key Password

Description

Schema Registry key password of HTTP client used for JWK OAuth2. You might require it when the keystore type is 'jwk'.

Related Name

schema.registry.oauth.jwks.httpClient.keyPassword

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.keyPassword

Required

false

OAuth2 JWK Server Keystore Password

Description

Schema Registry keystore password of HTTP client used for JWK OAuth2. You might require it when the keystore type is 'jwk'

Related Name

schema.registry.oauth.jwks.httpClient.keyStorePassword

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.keyStorePassword

Required

false

OAuth2 JWK Server Keystore Path

Description

If a key is required for accessing the JSON Web Key (JWK) server, then you provide the keystore path.

Related Name

schema.registry.oauth.jwks.httpClient.keyStorePath

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.keyStorePath

Required

false

OAuth2 JWK Server Keystore Provider

Description

Schema Registry keystore provider of HTTP client used for JWK OAuth2. You might require it when the keystore type is 'jwk'.

Related Name

schema.registry.oauth.jwks.httpClient.keyStoreProvider

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.keyStoreProvider

Required

false

OAuth2 JWK Server Keystore Type**Description**

Schema Registry keystore type of HTTP client used for JSON Web Key (JWK) OAuth2. You might require it when the keystore type is 'jwk'.

Related Name

schema.registry.oauth.jwks.httpClient.keyStoreType

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.keyStoreType

Required

false

OAuth2 JWK Server Security Protocol**Description**

HTTPS security protocol. By default, it is TLS.

Related Name

schema.registry.oauth.jwks.httpClient.protocol

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.protocol

Required

false

OAuth2 JWK Server Trust Manager Factory Algorithm**Description**

Schema Registry TrustManagerFactory algorithm for HTTP client used for JWK OAuth2. You might require it when the keystore type is 'jwk'.

Related Name

schema.registry.oauth.jwks.httpClient.trustManagerFactoryAlgorithm

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.trustManagerFactoryAlgorithm

Required

false

OAuth2 JWK Server Trust Manager Factory Provider**Description**

Schema Registry TrustManagerFactory provider for HTTP client used for JWK OAuth2. You might require it when the keystore type is 'jwk'.

Related Name

schema.registry.oauth.jwks.httpClient.trustManagerFactoryProvider

Default Value**API Name**`schema.registry.oauth.jwks.httpClient.trustManagerFactoryProvider`**Required**

false

OAuth2 JWK Server Truststore Password**Description**

Schema Registry truststore password of HTTP client used for JWK OAuth2. You might require it when the keystore type is 'jwk'.

Related Name`schema.registry.oauth.jwks.httpClient.trustStorePassword`**Default Value****API Name**`schema.registry.oauth.jwks.httpClient.trustStorePassword`**Required**

false

OAuth2 JWK Server Truststore Path**Description**

You can add the certificate of the JWK server to a truststore.

Related Name`schema.registry.oauth.jwks.httpClient.trustStorePath`**Default Value****API Name**`schema.registry.oauth.jwks.httpClient.trustStorePath`**Required**

false

OAuth2 JWK Server Truststore Provider**Description**

Schema Registry truststore provider of HTTP client used for JWK OAuth2. You might require it when the keystore type is 'jwk'.

Related Name`schema.registry.oauth.jwks.httpClient.trustStoreProvider`**Default Value****API Name**`schema.registry.oauth.jwks.httpClient.trustStoreProvider`**Required**

false

OAuth2 JWK Server Truststore Type**Description**

Schema Registry truststore type of HTTP client used for JWK OAuth2. You might require it when the keystore type is 'jwk'.

Related Name

schema.registry.oauth.jwks.httpClient.trustStoreType

Default Value**API Name**

schema.registry.oauth.jwks.httpClient.trustStoreType

Required

false

OAuth2 JWK Refresh Interval**Description**

Refresh interval for reading the keys from the JSON Web Key (JWK) server. Default value is 30000 ms (30 seconds).

Related Name

schema.registry.oauth.jwks.refresh.ms

Default Value

5 minute(s)

API Name

schema.registry.oauth.jwks.refresh.ms

Required

false

JWKS URL For OAuth2**Description**

URL to the server issuing the JSON Web Key (JWK) keys, which is required when the keystore type is 'jwks'. Note that this can also be a local file if the URL starts with 'file://'.

Related Name

schema.registry.oauth.jwks.url

Default Value**API Name**

schema.registry.oauth.jwks.url

Required

false

JWT Expected Audience For OAuth2**Description**

The expected value of the 'aud' claim on the server side. The JSON Web Token (JWT) can optionally contain this audience claim. When this claim is present then the same audience value is expected on the server side, otherwise the token is considered invalid..

Related Name

schema.registry.oauth.jwt.expected.audience

Default Value**API Name**

schema.registry.oauth.jwt.expected.audience

Required

false

JWT Expected Issuer For OAuth2**Description**

The expected value of the 'iss' claim. The JSON Web Token (JWT) can optionally contain this issuer claim. Schema Registry can be configured to only accept tokens issued by a specific issuer.

Related Name

schema.registry.oauth.jwt.expected.issuer

Default Value**API Name**

schema.registry.oauth.jwt.expected.issuer

Required

false

JWT Principal Claim Name For OAuth2**Description**

Specifies the name (or key) of the claim in the JSON Web Token (JWT) that contains the user ID. A JWT must contain a user ID (principal) that can be used for Ranger authorization. By default, it is assumed that the 'sub' claim contains the principal, but it can be modified with this parameter.

Related Name

schema.registry.oauth.jwt.principal.claim.name

Default Value**API Name**

schema.registry.oauth.jwt.principal.claim.name

Required

false

Type Of Store Containing The Validation Key**Description**

Type of the key storage from where to read the public key. Depending on the chosen value, additional configuration might be necessary.

Related Name

schema.registry.oauth.key.store.type

Default Value**API Name**

schema.registry.oauth.key.store.type

Required

false

OAuth2 Keystore Path**Description**

Path to the keystore file which is required when the keystore type is 'keystore'. Ensure that the file is readable by Schema Registry.

Related Name

schema.registry.oauth.keystore.public.key.keystore

Default Value**API Name**

schema.registry.oauth.keystore.public.key.keystore

Required

false

OAuth2 Keystore Alias**Description**

The alias of the key within the keystore, which is required when the keystore type is 'keystore'.

Related Name

schema.registry.oauth.keystore.public.key.keystore.alias

Default Value**API Name**

schema.registry.oauth.keystore.public.key.keystore.alias

Required

false

OAuth2 Keystore Password**Description**

Password for reading the keystore, which is required when the keystore type is 'keystore'.

Related Name

schema.registry.oauth.keystore.public.key.keystore.password

Default Value**API Name**

schema.registry.oauth.keystore.public.key.keystore.password

Required

false

OAuth2 Key As Property Algorithm**Description**

Algorithm of the key. This is required when keystore type is 'property'.

Related Name

schema.registry.oauth.property.key.algorithm

Default Value**API Name**

schema.registry.oauth.property.key.algorithm

Required

false

OAuth2 Key As Property**Description**

The public key or the secret.

Related Name

schema.registry.oauth.property.public.key.property

Default Value**API Name**

schema.registry.oauth.property.public.key.property

Required

false

ID Offset Range Maximum**Description**

Maximum value for generating IDs. Set maximum value to a value that is not conflicting with any other offset ranges between Schema Registry servers.

Related Name

schema.registry.offset.max

Default Value

100000

API Name

schema.registry.offset.max

Required

true

ID Offset Range Minimum**Description**

Minimum value for generating IDs. Set minimum value to a value that is not conflicting with any other offset ranges between Schema Registry servers.

Related Name

schema.registry.offset.min

Default Value

1

API Name

schema.registry.offset.min

Required

true

Oracle TLS [oracle.net.authentication_services](#)**Description**

Oracle net authentication service if enabling TLS using Oracle DB.

Related Name

schema.registry.oracle.net.authentication_services

Default Value**API Name**

schema.registry.oracle.net.authentication_services

Required

false

Oracle TLS `oracle.net.ssl_cipher_suites`**Description**

Oracle net ssl cipher suites if enabling TLS using Oracle DB e.g. SSL_DH_DSS_WITH_DES_CBC_SHA.

Related Name

schema.registry.oracle.net.ssl_cipher_suites

Default Value**API Name**

schema.registry.oracle.net.ssl_cipher_suites

Required

false

Oracle TLS `oracle.net.ssl_server_dn_match`**Description**

ORacle ssl server domain name match if enabling TLS using Oracle DB.

Related Name

schema.registry.oracle.net.ssl_server_dn_match

Default Value

true

API Name

schema.registry.oracle.net.ssl_server_dn_match

Required

false

Version of `oracle.net.ssl`**Description**

Oracle net ssl version.

Related Name

schema.registry.oracle.net.ssl_version

Default Value**API Name**

schema.registry.oracle.net.ssl_version

Required

false

Schema Registry Port**Description**

The port on which server accepts connections.

Related Name

schema.registry.port

Default Value

7788

API Name

schema.registry.port

Required

true

Schema Registry Proxyuser Knox Hosts**Description**

Comma separated list of IP addresses from which Knox can act as a trusted proxy.

Related Name

schema.registry.proxyuser.knox.hosts

Default Value

*

API Name

schema.registry.proxyuser.knox.hosts

Required

true

Schema Registry Proxyuser Streams Messaging Manager Hosts**Description**

Comma separated list of IP addresses from which Streams Messaging Manager can act as a trusted proxy.

Related Name

schema.registry.proxyuser.smm.hosts

Default Value

*

API Name

schema.registry.proxyuser.smm.hosts

Required

true

Retry Interval For API Availability Check**Description**

Specifies the interval (in seconds) at which the Schema Registry Rolling Restart Check tests the Schema Registry server's availability.

Related Name

schema.registry.rolling.restart.check.retry.interval.sec

Default Value

5 second(s)

API Name

schema.registry.rolling.restart.check.retry.interval.sec

Required

false

Maximum Allowed Runtime For Schema Registry Rolling Restart Check**Description**

Specifies the maximum amount of time (in seconds) that a Schema Registry Rolling Restart Check can take.

Related Name

schema.registry.rolling.restart.check.time.limit.sec

Default Value

2 minute(s)

API Name

schema.registry.rolling.restart.check.time.limit.sec

Required

false

Schema Registry Servlet Filter**Description**

Schema Registry servlet filter class.

Related Name

schema.registry.servlet.filter

Default Value

com.hortonworks.registries.auth.server.AuthenticationFilter

API Name

schema.registry.servlet.filter

Required

true

Excluded SSL/TLS Cipher Suites**Description**

A list of cipher suites which are excluded. If left empty, falls back to the server default.

Related Name

schema.registry.ssl.excludedCipherSuites

Default Value**API Name**

schema.registry.ssl.excludedCipherSuites

Required

false

Excluded SSL/TLS Protocols**Description**

A list of protocols which are excluded. If left empty, falls back to the server default.

Related Name

schema.registry.ssl.excludedProtocols

Default Value**API Name**

schema.registry.ssl.excludedProtocols

Required

false

SSL Keystore Type

Description

The keystore type. It is blank by default but required if schema registry's ssl is enabled. e.g. PKCS12 or JKS. If it is left empty then this keystore type will come from CM settings.

Related Name

schema.registry.ssl.keyStoreType

Default Value**API Name**

schema.registry.ssl.keyStoreType

Required

false

SSL Client Authentication

Description

If enabled, the server will require the client to provide an SSL certificate for authentication. Please also provide the rules to extract the principal from the certificate.

Related Name

schema.registry.ssl.needClientAuth

Default Value

false

API Name

schema.registry.ssl.needClientAuth

Required

false

Schema Registry Port (SSL)

Description

HTTPS port Schema Registry node runs on when SSL is enabled.

Related Name

schema.registry.ssl.port

Default Value

7790

API Name

schema.registry.ssl.port

Required

false

SSL Client Authentication Mapping Rules

Description

The rule takes the form of a regular expression to match the certificate's subject name and the transformation to apply to the match. There can be multiple rules, separated by commas. The last rule is usually the DEFAULT rule, which simply uses the full subject name.

Related Name

schema.registry.ssl.principal.mapping.rules

Default Value

DEFAULT

API Name

schema.registry.ssl.principal.mapping.rules

Required

false

Supported SSL/TLS Cipher Suites

Description

A list of cipher suites which are supported. If left empty, falls back to the server default.

Related Name

schema.registry.ssl.supportedCipherSuites

Default Value

API Name

schema.registry.ssl.supportedCipherSuites

Required

false

Supported SSL/TLS Protocols

Description

A list of protocols which are supported. If left empty, falls back to the server default.

Related Name

schema.registry.ssl.supportedProtocols

Default Value

API Name

schema.registry.ssl.supportedProtocols

Required

false

SSL TrustStore Type

Description

The truststore type. It is blank by default but required if schema registry's ssl is enabled. e.g. PKCS12 or JKS. If it is left empty then this keystore type will come from CM settings.

Related Name

schema.registry.ssl.trustStoreType

Default Value

API Name

schema.registry.ssl.trustStoreType

Required

false

SSL ValidateCerts

Description

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates. Note: if this is enabled, the certificate revocation method (CRLDP/OCSP) is also needed. This can be done by overriding Dropwizard configuration with Java

system properties. E.g: -Ddw.server.applicationConnectors[0].enableCRLDP=true (more details at <https://www.dropwizard.io/en/latest/manual/core.html>)

Related Name

schema.registry.ssl.validateCerts

Default Value

false

API Name

schema.registry.ssl.validateCerts

Required

false

SSL ValidatePeers

Description

Whether or not to validate TLS peer certificates.

Related Name

schema.registry.ssl.validatePeers

Default Value

false

API Name

schema.registry.ssl.validatePeers

Required

false

Schema Registry Query Timeout

Description

Schema Registry query timeout.

Related Name

schema.registry.storage.query.timeout

Default Value

30 second(s)

API Name

schema.registry.storage.query.timeout

Required

true

Schema Registry Token Validity

Description

Kerberos token validity for Schema Registry in ms.

Related Name

schema.registry.token.validity

Default Value

36000

API Name

schema.registry.token.validity

Required

false

Schema Registry Load Balancer Host

Description

The host of the load balancer that is used to balance requests between Schema Registry instances.

Related Name

schema_registry_load_balancer_host

Default Value

API Name

schema_registry_load_balancer_host

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing

memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Schema Registry Server TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Schema Registry Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

schema.registry.ssl.trustStorePath

Default Value**API Name**

ssl_client_truststore_location

Required

false

Schema Registry Server TLS/SSL Trust Store Password

Description

The password for the Schema Registry Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

schema.registry.ssl.trustStorePassword

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Schema Registry Server

Description

Encrypt communication between clients and Schema Registry Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl.enable

Default Value

false

API Name

ssl_enabled

Required

false

Schema Registry Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Schema Registry Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

schema.registry.ssl.keyStorePath

Default Value**API Name**

ssl_server_keystore_location

Required

false

Schema Registry Server TLS/SSL Server Keystore File Password

Description

The password for the Schema Registry Server keystore file.

Related Name

schema.registry.ssl.keyStorePassword

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Parameter Validation: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for atlas-application.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for atlas-application.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas-application.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Atlas Url Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Url Override parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_url

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Fingerprint Generator Java Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Fingerprint Generator Java Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_fingerprint.generator.java.options

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_jmx_exporter_yaml`**Required**`true`**Suppress Parameter Validation: Schema Registry Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Log Directory parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_log_dir`**Required**`true`**Suppress Parameter Validation: Schema Registry Server XML Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server XML Override parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_logback_safety_valve`**Required**`true`**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_oom_heap_dump_dir`**Required**`true`**Suppress Parameter Validation: OpenTelemetry Collector Exporters Section****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Parameter Validation: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-audit.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-audit.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-schema-registry-audit.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-policymgr-ssl.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-policymgr-ssl.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-schema-registry-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-security.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-security.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-schema-registry-security.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ranger Schema Registry Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Schema Registry Plugin Policy Cache Directory Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.plugin.schema-registry.policy.cache.dir

Required

true

Suppress Parameter Validation: Ranger Schema Registry Service Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Schema Registry Service Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.plugin.schema-registry.service.name

Required

true

Suppress Parameter Validation: Ranger Schema Registry Manager Plugin Audit Hdfs Spool Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Schema Registry Manager Plugin Audit Hdfs Spool Directory Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Parameter Validation: Ranger Schema Registry Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Schema Registry Plugin Audit Solr Spool Directory Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Parameter Validation: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_registry.yaml_role_safety_valve

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Schema Registry Additional Java Options

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Additional Java Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.additional.java.options

Required

true

Suppress Parameter Validation: Schema Registry Allowed Resources

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Allowed Resources parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.allowed.resources

Required

true

Suppress Parameter Validation: Hashing Algorithm Used For Generating Fingerprints

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hashing Algorithm Used For Generating Fingerprints parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.hash.function

Required

true

Suppress Parameter Validation: Password For HTTP Proxy Server Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password For HTTP Proxy Server Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.httpproxypassword

Required

true

Suppress Parameter Validation: HTTP Proxy Server

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy Server parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.httpproxyserver

Required

true

Suppress Parameter Validation: Username For HTTP Proxy Server

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Username For HTTP Proxy Server parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.httpproxyusername

Required

true

Suppress Parameter Validation: Schema Registry Jar Storage Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Jar Storage Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.jar.storage.directory.path

Required

true

Suppress Parameter Validation: Schema Registry Jar Storage HDFS URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Jar Storage HDFS URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.jar.storage.hdfs.url

Required

true

Suppress Parameter Validation: Oracle TLS javax.net.ssl.keyStore**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.keyStore parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.javax.net.ssl.keystore

Required

true

Suppress Parameter Validation: Oracle TLS javax.net.ssl.keyStorePassword

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.keyStorePassword parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.javax.net.ssl.keystorepassword

Required

true

Suppress Parameter Validation: Oracle TLS javax.net.ssl.keyStoreType

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.keyStoreType parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.javax.net.ssl.keystoretype

Required

true

Suppress Parameter Validation: Oracle TLS javax.net.ssl.trustStore

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.trustStore parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.javax.net.ssl.truststore

Required

true

Suppress Parameter Validation: Oracle TLS javax.net.ssl.trustStorePassword

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.trustStorePassword parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_schema.registry.javax.net.ssl.truststorepassword`**Required**

true

Suppress Parameter Validation: Oracle TLS javax.net.ssl.trustStoreType**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS `javax.net.ssl.trustStoreType` parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_schema.registry.javax.net.ssl.truststoretype`**Required**

true

Suppress Parameter Validation: Java Home Path Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_schema.registry.jdk.home`**Required**

true

Suppress Parameter Validation: Schema Registry Kerberos Name Rules**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Kerberos Name Rules parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_schema.registry.kerberos.name.rules`**Required**

true

Suppress Parameter Validation: Schema Registry Kerberos Non Browser User Agents**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Kerberos Non Browser User Agents parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.kerberos.non.browser.user.agents

Required

true

Suppress Parameter Validation: Schema Registry MaxRequestHeaderSize

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry MaxRequestHeaderSize parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.maxrequestheadersize

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Login Basic Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Login Basic Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.basic.password

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Login Basic User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Login Basic User parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.basic.user

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Key Manager Factory Algorithm

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Key Manager Factory Algorithm parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.keymanagerfactoryalgorithm

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Key Manager Factory Provider

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Key Manager Factory Provider parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.keymanagerfactoryprovider

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Key Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.keypassword

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Keystore Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Keystore Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.keystorepassword

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Keystore Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Keystore Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.keystorepath

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Keystore Provider

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Keystore Provider parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.keystoreprovider

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Keystore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Keystore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.keystoretype

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Security Protocol

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Security Protocol parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.protocol

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Trust Manager Factory Algorithm

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Trust Manager Factory Algorithm parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.trustmanagerfactoryalgorithm

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Trust Manager Factory Provider

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Trust Manager Factory Provider parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.trustmanagerfactoryprovider

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Truststore Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Truststore Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.truststorepassword

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Truststore Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Truststore Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpClient.truststorepath

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Truststore Provider

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Truststore Provider parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpClient.truststoreprovider

Required

true

Suppress Parameter Validation: OAuth2 JWK Server Truststore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 JWK Server Truststore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpClient.truststoretype

Required

true

Suppress Parameter Validation: JWKS URL For OAuth2

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JWKS URL For OAuth2 parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.url

Required

true

Suppress Parameter Validation: JWT Expected Audience For OAuth2

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JWT Expected Audience For OAuth2 parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwt.expected.audience

Required

true

Suppress Parameter Validation: JWT Expected Issuer For OAuth2

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JWT Expected Issuer For OAuth2 parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwt.expected.issuer

Required

true

Suppress Parameter Validation: JWT Principal Claim Name For OAuth2

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JWT Principal Claim Name For OAuth2 parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwt.principal.claim.name

Required

true

Suppress Parameter Validation: OAuth2 Keystore Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 Keystore Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.keystore.public.key.keystore

Required

true

Suppress Parameter Validation: OAuth2 Keystore Alias

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 Keystore Alias parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.keystore.public.key.keystore.alias

Required

true

Suppress Parameter Validation: OAuth2 Keystore Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 Keystore Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.keystore.public.key.keystore.password

Required

true

Suppress Parameter Validation: OAuth2 Key As Property

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OAuth2 Key As Property parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.property.public.key.property

Required

true

Suppress Parameter Validation: Oracle TLS oracle.net.authentication_services

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS oracle.net.authentication_services parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oracle.net.authentication_services

Required

true

Suppress Parameter Validation: Oracle TLS oracle.net.ssl_cipher_suites

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS oracle.net.ssl_cipher_suites parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oracle.net.ssl_cipher_suites

Required

true

Suppress Parameter Validation: Version of oracle.net.ssl

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Version of oracle.net.ssl parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oracle.net.ssl_version

Required

true

Suppress Parameter Validation: Schema Registry Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.port

Required

true

Suppress Parameter Validation: Schema Registry Proxyuser Knox Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Proxyuser Knox Hosts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.proxyuser.knox.hosts

Required

true

Suppress Parameter Validation: Schema Registry Proxyuser Streams Messaging Manager Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Proxyuser Streams Messaging Manager Hosts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.proxyuser.smm.hosts

Required

true

Suppress Parameter Validation: Schema Registry Servlet Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Servlet Filter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.servlet.filter

Required

true

Suppress Parameter Validation: Excluded SSL/TLS Cipher Suites**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Excluded SSL/TLS Cipher Suites parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.excludedciphersuites

Required

true

Suppress Parameter Validation: Excluded SSL/TLS Protocols

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Excluded SSL/TLS Protocols parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.excludedprotocols

Required

true

Suppress Parameter Validation: SSL Keystore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.keystoretype

Required

true

Suppress Parameter Validation: Schema Registry Port (SSL)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Port (SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.port

Required

true

Suppress Parameter Validation: SSL Client Authentication Mapping Rules

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Client Authentication Mapping Rules parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.principal.mapping.rules

Required

true

Suppress Parameter Validation: Supported SSL/TLS Cipher Suites

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Supported SSL/TLS Cipher Suites parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.supportedciphersuites

Required

true

Suppress Parameter Validation: Supported SSL/TLS Protocols

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Supported SSL/TLS Protocols parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.supportedprotocols

Required

true

Suppress Parameter Validation: SSL TrustStore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.truststoretype

Required

true

Suppress Parameter Validation: SSL ValidateCerts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.validatecerts

Required

true

Suppress Parameter Validation: SSL ValidatePeers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidatePeers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.validatepeers

Required

true

Suppress Parameter Validation: Schema Registry Load Balancer Host

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Load Balancer Host parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema_registry_load_balancer_host

Required

true

Suppress Parameter Validation: Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema_registry_server_role_env_safety_valve

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

`role_config_suppression_ssl_server_keystore_password`**Required**`true`**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_schemaregistry_schema_registry_server_audit_health`**Required**`true`**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Required

false

Healthy Schema Registry Server Monitoring Thresholds

Description

The health test thresholds of the overall Schema Registry Server health. The check returns "Concerning" health if the percentage of "Healthy" Schema Registry Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Schema Registry Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.99 %, Critical: 49.99 %

API Name

SCHEMAREGISTRY_SCHEMA_REGISTRY_SERVER_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Configuration Validator: OAuth2 JWK Server Truststore Provider

Description

Whether to suppress configuration warnings produced by the OAuth2 JWK Server Truststore Provider configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.truststoreprovider

Required

true

Suppress Configuration Validator: OAuth2 JWK Server Truststore Type

Description

Whether to suppress configuration warnings produced by the OAuth2 JWK Server Truststore Type configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwks.httpclient.truststoretype

Required

true

Suppress Configuration Validator: JWKS URL For OAuth2**Description**

Whether to suppress configuration warnings produced by the JWKS URL For OAuth2 configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oauth.jwks.url

Required

true

Suppress Configuration Validator: JWT Expected Audience For OAuth2**Description**

Whether to suppress configuration warnings produced by the JWT Expected Audience For OAuth2 configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oauth.jwt.expected.audience

Required

true

Suppress Configuration Validator: JWT Expected Issuer For OAuth2**Description**

Whether to suppress configuration warnings produced by the JWT Expected Issuer For OAuth2 configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oauth.jwt.expected.issuer

Required

true

Suppress Configuration Validator: JWT Principal Claim Name For OAuth2**Description**

Whether to suppress configuration warnings produced by the JWT Principal Claim Name For OAuth2 configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.jwt.principal.claim.name

Required

true

Suppress Configuration Validator: OAuth2 Keystore Path

Description

Whether to suppress configuration warnings produced by the OAuth2 Keystore Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.keystore.public.key.keystore

Required

true

Suppress Configuration Validator: OAuth2 Keystore Alias

Description

Whether to suppress configuration warnings produced by the OAuth2 Keystore Alias configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.keystore.public.key.keystore.alias

Required

true

Suppress Configuration Validator: OAuth2 Keystore Password

Description

Whether to suppress configuration warnings produced by the OAuth2 Keystore Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oauth.keystore.public.key.keystore.password

Required

true

Suppress Configuration Validator: OAuth2 Key As Property

Description

Whether to suppress configuration warnings produced by the OAuth2 Key As Property configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oauth.property.public.key.property

Required

true

Suppress Configuration Validator: Oracle TLS oracle.net.authentication_services

Description

Whether to suppress configuration warnings produced by the Oracle TLS oracle.net.authentication_services configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oracle.net.authentication_services

Required

true

Suppress Configuration Validator: Oracle TLS oracle.net.ssl_cipher_suites

Description

Whether to suppress configuration warnings produced by the Oracle TLS oracle.net.ssl_cipher_suites configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oracle.net.ssl_cipher_suites

Required

true

Suppress Configuration Validator: Version of oracle.net.ssl

Description

Whether to suppress configuration warnings produced by the Version of oracle.net.ssl configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.oracle.net.ssl_version

Required

true

Suppress Configuration Validator: Schema Registry Port

Description

Whether to suppress configuration warnings produced by the Schema Registry Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.port

Required

true

Suppress Configuration Validator: Schema Registry Proxyuser Knox Hosts

Description

Whether to suppress configuration warnings produced by the Schema Registry Proxyuser Knox Hosts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.proxyuser.knox.hosts

Required

true

Suppress Configuration Validator: Schema Registry Proxyuser Streams Messaging Manager Hosts

Description

Whether to suppress configuration warnings produced by the Schema Registry Proxyuser Streams Messaging Manager Hosts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.proxyuser.smm.hosts

Required

true

Suppress Configuration Validator: Schema Registry Servlet Filter

Description

Whether to suppress configuration warnings produced by the Schema Registry Servlet Filter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.servlet.filter

Required

true

Suppress Configuration Validator: Excluded SSL/TLS Cipher Suites

Description

Whether to suppress configuration warnings produced by the Excluded SSL/TLS Cipher Suites configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.excludedciphersuites

Required

true

Suppress Configuration Validator: Excluded SSL/TLS Protocols

Description

Whether to suppress configuration warnings produced by the Excluded SSL/TLS Protocols configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.excludedprotocols

Required

true

Suppress Configuration Validator: SSL Keystore Type

Description

Whether to suppress configuration warnings produced by the SSL Keystore Type configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.keystoretype

Required

true

Suppress Configuration Validator: Schema Registry Port (SSL)

Description

Whether to suppress configuration warnings produced by the Schema Registry Port (SSL) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.port

Required

true

Suppress Configuration Validator: SSL Client Authentication Mapping Rules

Description

Whether to suppress configuration warnings produced by the SSL Client Authentication Mapping Rules configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.principal.mapping.rules

Required

true

Suppress Configuration Validator: Supported SSL/TLS Cipher Suites

Description

Whether to suppress configuration warnings produced by the Supported SSL/TLS Cipher Suites configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.supportedciphersuites

Required

true

Suppress Configuration Validator: Supported SSL/TLS Protocols

Description

Whether to suppress configuration warnings produced by the Supported SSL/TLS Protocols configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.supportedprotocols

Required

true

Suppress Configuration Validator: SSL TrustStore Type

Description

Whether to suppress configuration warnings produced by the SSL TrustStore Type configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.truststoretype

Required

true

Suppress Configuration Validator: SSL ValidateCerts

Description

Whether to suppress configuration warnings produced by the SSL ValidateCerts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.validatecerts

Required

true

Suppress Configuration Validator: SSL ValidatePeers

Description

Whether to suppress configuration warnings produced by the SSL ValidatePeers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.validatepeers

Required

true

Suppress Configuration Validator: Schema Registry Load Balancer Host

Description

Whether to suppress configuration warnings produced by the Schema Registry Load Balancer Host configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema_registry_load_balancer_host

Required

true

Suppress Configuration Validator: Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_schema_registry_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Schema Registry Server TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Schema Registry Server TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Schema Registry Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Server Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Schema Registry Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Server Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Schema Registry Database Host

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database Host parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_host

Required

true

Suppress Parameter Validation: Schema Registry Database JDBC Url Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database JDBC Url Override parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_jdbc_url_override

Required

true

Suppress Parameter Validation: Schema Registry Database Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_name

Required

true

Suppress Parameter Validation: Schema Registry Database User Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database User Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_password

Required

true

Suppress Parameter Validation: Schema Registry Database Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database Port parameter.

Related Name

Default Value

false

API Name

service_config_suppression_database_port

Required

true

Suppress Parameter Validation: Schema Registry Database User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_database_user

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger SchemaRegistry Plugin Hdfs Audit Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger SchemaRegistry Plugin Hdfs Audit Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_sr_plugin_hdfs_audit_directory

Required

true

Suppress Configuration Validator: Schema Registry Server Count Validator

Description

Whether to suppress configuration warnings produced by the Schema Registry Server Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_schema_registry_server_count_validator

Required

true

Suppress Parameter Validation: Schema Registry Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_schemaregistry_service_env_safety_valve

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Schema Registry Server Health

Description

Whether to suppress the results of the Schema Registry Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_schemaregistry_schema_registry_server_healthy

Required

Solr Properties in Cloudera Runtime 7.3.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name

Default Value

/etc/solr

API Name

client_config_root_dir

Required

true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Logs

Gateway Logging Threshold

Description

The minimum log level for Gateway logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

90

API Name

client_config_priority

Required

true

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Service-Wide

Required

true

Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml**Description**

For advanced use only, a string to be inserted into ranger-solr-audit.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_audit_safety_valve

Required

false

Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-policymgr-ssl.xml**Description**

For advanced use only, a string to be inserted into ranger-solr-policymgr-ssl.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_policymgr_ssl_safety_valve

Required

false

Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-security.xml**Description**

For advanced use only, a string to be inserted into ranger-solr-security.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_security_safety_valve

Required

false

Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

For advanced use only, a string to be inserted into core-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value**

API Name

solr_core_site_safety_valve

Required

false

Solr Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

solr_env_safety_valve

Required

false

Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

For advanced use only, a string to be inserted into hdfs-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

solr_hdfs_site_safety_valve

Required

false

Enable Solrd Watchdog**Description**

Enable the background watchdog thread that can kill Catalina process if Solr is not responsive.

Related Name**Default Value**

true

API Name

solrd_enable_watchdog

Required

false

Monitoring**Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

Healthy Solr Server Monitoring Thresholds

Description

The health test thresholds of the overall Solr Server health. The check returns "Concerning" health if the percentage of "Healthy" Solr Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Solr Servers falls below the critical threshold.

Related Name

Default Value

Warning: 95.0 %, Critical: 90.0 %

API Name

solr_solr_servers_healthy_thresholds

Required

false

Other

HDFS Data Directory

Description

HDFS directory used for storage by this Solr service.

Related Name

Default Value

/solr

API Name

hdfs_data_dir

Required

true

HDFS Service

Description

Name of the HDFS service that this Search service instance depends on

Related Name

Default Value

API Name

hdfs_service

Required

true

Ranger Plugin Trusted Proxy IP Address**Description**

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.solr.trusted.proxy.ipaddress

Default Value**API Name**

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded for IP Address**Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.solr.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Ranger Service**Description**

Name of the Ranger service that this Solr service instance depends on. This config is used for enabling Ranger authorization in the Solr instance not used by Ranger.

Related Name**Default Value****API Name**

ranger_service

Required

false

Solr Server for Upgrade**Description**

Solr server to be used while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7.

Related Name**Default Value****API Name**

solr_server_for_upgrade

Required

false

Upgrade Backup Directory

Description

Directory on the HDFS file system that is used as the backup directory while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7.

Related Name

Default Value

/user/solr/upgrade_backup

API Name

solr_upgrade_backup_dir

Required

false

Upgrade Metadata Directory

Description

Directory on the local file system containing the migrated configurations and metadata required while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7. Note: This directory should be present in the Solr Server specified in 'Solr Server for Upgrade'.

Related Name

Default Value

/var/lib/upgrade/solr_config

API Name

solr_upgrade_metadata_dir

Required

true

Solrd Watchdog Timeout

Description

If Solr does not respond on its web URL within this time interval, the Catalina process is killed.

Related Name

Default Value

1 minute(s), 10 second(s)

API Name

solrd_watchdog_timeout

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Search service instance depends on

Related Name

Default Value**API Name**

zookeeper_service

Required

true

ZooKeeper Znode**Description**

ZooKeeper znode used to store information about this Solr service.

Related Name**Default Value**

/solr

API Name

zookeeper_znode

Required

true

Security**Enable Ranger Authorization for the Infrastructure Solr Service****Description**

Enable fine-grained security using Ranger for the infrastructure (infra) Solr service. This option is only for the Solr service that the Ranger service is using (for ranger-audits, etc.). No other Solr service can or should enable this option.

Related Name**Default Value**

false

API Name

enable_ranger_authorization

Required

false

Kerberos Principal**Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

solr

API Name

kerberos_princ_name

Required

true

Active Directory Domain**Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name**Default Value****API Name**

ldap_domain

Required

false

Ranger DFS Audit Path**Description**

The DFS path on which Ranger audits are written. The special placeholder '\${ranger_base_audit_url}' should be used as the prefix, in order to use the centralized location defined in the Ranger service.

Related Name

xasecure.audit.destination.hdfs.dir

Default Value

\$ranger_base_audit_url/solr

API Name

ranger_audit_hdfs_dir

Required

false

Ranger Audit DFS Spool Dir**Description**

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/solr/audit/hdfs/spool

API Name

ranger_audit_hdfs_spool_dir

Required

false

Ranger Audit Solr Spool Dir**Description**

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/solr/audit/solr/spool

API Name

ranger_audit_solr_spool_dir

Required

false

Ranger Policy Cache Directory**Description**

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.solr.policy.cache.dir

Default Value

/var/lib/ranger/solr/policy-cache

API Name

ranger_policy_cache_dir

Required

false

Enable LDAP Authentication**Description**

When checked, LDAP-based authentication for users is enabled.

Related Name**Default Value**

false

API Name

solr_enable_ldap_auth

Required

false

Solr TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Solr is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name**Default Value****API Name**

solr_https_keystore_file

Required

false

Solr TLS/SSL Server Keystore File Password**Description**

The password for the Solr keystore file.

Related Name

solr.jetty.keystore.password

Default Value

API Name

solr_https_keystore_password

Required

false

Solr TLS/SSL Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Solr might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**

solr_https_truststore_file

Required

false

Solr TLS/SSL Trust Store Password**Description**

The password for the Solr TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

solr.jetty.truststore.password

Default Value**API Name**

solr_https_truststore_password

Required

false

LDAP BaseDN**Description**

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,*this parameter*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

Related Name**Default Value****API Name**

solr_ldap_basedn

Required

false

Enable LDAP TLS

Description

If true, attempts to establish a TLS (Transport Layer Security) connection with an LDAP server that was specified with ldap://. Not required when using an LDAP URL with prefix ldaps://, because that already specifies TLS. This option is also known as "Use StartTLS".

Related Name**Default Value**

false

API Name

solr_ldap_enable_starttls

Required

false

LDAP URL

Description

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps://. The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name**Default Value****API Name**

solr_ldap_uri

Required

false

Solr Secure Authentication

Description

Choose the authentication mechanism used by Solr.

Related Name**Default Value**

simple

API Name

solr_security_authentication

Required

false

Enable TLS/SSL for Solr

Description

Encrypt communication between clients and Solr using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)). Additional manual steps must be performed; see [Enabling TLS/SSL for Solr](#).

Related Name

Default Value

false

API Name

solr_use_ssl

Required

false

Enable TLS/SSL for Solr Zookeeper

Description

Encrypt communication between clients and Solr Zookeeper using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

solr.zookeeper.ssl.client.enable

Default Value

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the JMX Exporter configuration YAML configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Configuration Validator: Solr Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Solr Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Exporters Section configuration validator.

Related Name

Default Value

false

API Name

`role_config_suppression_otelcol_exporters`**Required**`true`**Suppress Configuration Validator: OpenTelemetry Collector Extensions Section****Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Extensions Section configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_extensions`**Required**`true`**Suppress Configuration Validator: OpenTelemetry Collector Helper Port****Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Helper Port configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_helper_port`**Required**`true`**Suppress Configuration Validator: OpenTelemetry Collector Processors Section****Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Processors Section configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_processors`**Required**`true`**Suppress Configuration Validator: OpenTelemetry Collector Receivers Section****Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write URL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Solr Data Directory**Description**

Whether to suppress configuration warnings produced by the Solr Data Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_data_dir

Required

true

Suppress Configuration Validator: Solr HTTP Port**Description**

Whether to suppress configuration warnings produced by the Solr HTTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_http_port

Required

true

Suppress Configuration Validator: Solr HTTPS port**Description**

Whether to suppress configuration warnings produced by the Solr HTTPS port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_https_port

Required

true

Suppress Configuration Validator: Java Heap Size of Solr Server in Bytes**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Solr Server in Bytes configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_java_heapsize

Required

true

Suppress Configuration Validator: Java Configuration Options for Solr Server**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Solr Server configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_java_opts

Required

true

Suppress Configuration Validator: Solr Load Balancer**Description**

Whether to suppress configuration warnings produced by the Solr Load Balancer configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_load_balancer

Required

true

Suppress Configuration Validator: Solr Server Log Directory**Description**

Whether to suppress configuration warnings produced by the Solr Server Log Directory configuration validator.

Related Name**Default Value**

	false
API Name	role_config_suppression_solr_log_dir
Required	true

Suppress Configuration Validator: Solr Plugins Directory

Description	Whether to suppress configuration warnings produced by the Solr Plugins Directory configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_solr_plugins_dir
Required	true

Suppress Configuration Validator: Solr Server Environment Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the Solr Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_solr_server_role_env_safety_valve
Required	true

Suppress Configuration Validator: Stacks Collection Directory

Description	Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_stacks_collection_directory
Required	true

Suppress Configuration Validator: Gateway Count Validator

Description	
--------------------	--

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: HDFS Data Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Data Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_data_dir

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Active Directory Domain**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap_domain

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger DFS Audit Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_dir

Required

true

Suppress Parameter Validation: Ranger Audit DFS Spool Dir

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_audit_safety_valve

Required

true

Suppress Parameter Validation: Ranger Audit Solr Spool Dir

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Ranger Policy Cache Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_policy_cache_dir

Required

true

Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-policymgr-ssl.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-policymgr-ssl.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_policymgr_ssl_safety_valve

Required

true

Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_core_site_safety_valve

Required

true

Suppress Parameter Validation: Solr Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_env_safety_valve

Required

true

Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_hdfs_site_safety_valve

Required

true

Suppress Parameter Validation: Solr TLS/SSL Server Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Server Keystore File Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_https_keystore_file

Required

true

Suppress Parameter Validation: Solr TLS/SSL Server Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Server Keystore File Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_https_keystore_password

Required

true

Suppress Parameter Validation: Solr TLS/SSL Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Trust Store File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_https_truststore_file

Required

true

Suppress Parameter Validation: Solr TLS/SSL Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Trust Store Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_https_truststore_password

Required

true

Suppress Parameter Validation: LDAP BaseDN**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_ldap_basedn

Required

true

Suppress Configuration Validator: LDAP TLS Validator**Description**

Whether to suppress configuration warnings produced by the LDAP TLS Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_ldap_tls_validator

Required

true

Suppress Parameter Validation: LDAP URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_ldap_uri

Required

true

Suppress Configuration Validator: LDAP Secure URI and Start TLS Validator

Description

Whether to suppress configuration warnings produced by the LDAP Secure URI and Start TLS Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_solr_ldaps_or_tls_validator

Required

true

Suppress Configuration Validator: Solr Server Count Validator

Description

Whether to suppress configuration warnings produced by the Solr Server Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_solr_server_count_validator

Required

true

Suppress Parameter Validation: Upgrade Backup Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Upgrade Backup Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_upgrade_backup_dir

Required

true

Suppress Parameter Validation: Upgrade Metadata Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Upgrade Metadata Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_upgrade_metadata_dir

Required

true

Suppress Parameter Validation: Solrd Watchdog Timeout**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solrd Watchdog Timeout parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solrd_watchdog_timeout

Required

true

Suppress Parameter Validation: ZooKeeper Znode**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Znode parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_znode

Required

true

Suppress Health Test: Solr Server Health**Description**

Whether to suppress the results of the Solr Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_solr_solr_servers_healthy

Required

true

Solr Server**Advanced****Solr Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Java Configuration Options for Solr Server**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, `{{JAVA_GC_ARGS}}` will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

solr_java_opts

Required

false

Solr Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment.
Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

SOLR_SERVER_role_env_safety_valve

Required

false

ZooKeeper Client Timeout**Description**

The time in milliseconds a client is allowed to not talk to ZooKeeper before its session expires.

Related Name

zkClientTimeout

Default Value

15 second(s)

API Name

zookeeper_client_timeout

Required

true

Logs**Solr Server Logging Threshold****Description**

The minimum log level for Solr Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Solr Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Solr Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Solr Server Max Log Size

Description

The maximum size, in megabytes, per log file for Solr Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Solr Server Log Directory

Description

Directory where Solr Server will place its log files.

Related Name**Default Value**

/var/log/solr

API Name

solr_log_dir

Required

true

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

otelcol_exporters

Required

false

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

otelcol_extensions

Required

false

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value**

API Name

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify \$INFRA(cdp_request_signer_password) when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_url)

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_exporters

Required

false

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Other

Solr Data Directory

Description

Directory on local file system where Solr Server keeps the configurations for collections.

Related Name

Default Value

/var/lib/solr

API Name

solr_data_dir

Required

true

Graceful Shutdown Timeout

Description

Timeout (in seconds) for graceful shutdown of this Solr server. Once this timeout is reached, Solr server is abruptly shutdown. A value of 0 means no timeout.

Related Name

Default Value

3 minute(s)

API Name

solr_graceful_stop_timeout

Required

false

Solr Load Balancer

Description

Address of the load balancer, specified in host:port format.

Related Name

Default Value

API Name

solr_load_balancer

Required

false

Solr Plugins Directory

Description

Directory on local file system where Solr Server can find additional JARs. This directory is not monitored for changes during the lifetime of a solr server, and a restart is required to read any updates to the directory contents.

Related Name

Default Value

API Name

solr_plugins_dir

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Solr Max Connector Threads

Description

The maximum number of request processing threads to be created by Solr server, which determines the maximum number of simultaneous requests that can be handled.

Related Name

Default Value

10000

API Name

solr_max_connector_thread

Required

true

Ports and Addresses

Solr HTTP Port

Description

HTTP port of Solr Server.

Related Name

solr_http_port

Default Value

8983

API Name

solr_http_port

Required

true

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

`rm_memory_hard_limit_v1`**Required**`true`**Cgroup V2 Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.max`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit_v2`**Required**`true`**Cgroup V1 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v1`**Required**`true`**Cgroup V2 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.high`

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

HDFS Block Cache Blocks per Slab**Description**

Number of blocks per cache slab. The size of the cache is 8 KB (the block size) times the number of blocks per slab times the number of slabs.

Related Name

solr.hdfs.blockcache.blocksperbank

Default Value

16384

API Name

solr_hdfs_blockcache_blocksperbank

Required

true

HDFS Block Cache Off-Heap Memory**Description**

Use off-heap memory when caching HDFS blocks in Solr.

Related Name

solr.hdfs.blockcache.direct.memory.allocation

Default Value

true

API Name

solr_hdfs_blockcache_direct_memory_allocation

Required

true

HDFS Block Cache**Description**

Enable caching of HDFS blocks in Solr. There is one block cache per Solr collection. configured to use off-heap memory, Maximum Off-Heap Memory must be set high enough to account for all block caches.

Related Name

solr.hdfs.blockcache.enabled

Default Value

true

API Name

solr_hdfs_blockcache_enabled

Required

true

HDFS Block Cache Number of Slabs

Description

Number of slabs per block cache. The size of the cache is 8 KB (the block size) times the number of blocks per slab times the number of slabs.

Related Name

solr.hdfs.blockcache.slab.count

Default Value

1

API Name

solr_hdfs_blockcache_slab_count

Required

true

Java Direct Memory Size of Solr Server in Bytes

Description

Maximum amount of off-heap memory in bytes that may be allocated by the Java process. Passed to Java `-XX:MaxDirectMemorySize`. If unset, defaults to the size of the heap.

Related Name**Default Value**

1 GiB

API Name

solr_java_direct_memory_size

Required

false

Java Heap Size of Solr Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java `-Xmx`.

Related Name**Default Value**

1 GiB

API Name

solr_java_heapsize

Required

false

Security

Solr HTTPS port

Description

HTTPS port of Solr Server.

solr_https_port

Default Value

8985

API Name

solr_https_port

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Solr Server API Liveness

Description

Whether to suppress the results of the Solr Server API Liveness health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_core_status_collection_health

Required

true

Suppress Health Test: Solr Server Critical State Cores**Description**

Whether to suppress the results of the Solr Server Critical State Cores health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_critical_cores_health

Required

true

Suppress Health Test: Solr Server Recovering Cores**Description**

Whether to suppress the results of the Solr Server Recovering Cores health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_recovering_cores_health

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_server_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_server_file_descriptor

Required

true

Suppress Health Test: GC Duration

Description

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_server_gc_duration

Required

true

Suppress Health Test: Heap Dump Directory Free Space

Description

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_server_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_server_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_server_otelcol_health

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_server_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_server_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_solr_server_unexpected_exits

Required

true

Suppress Health Test: Web Server Status

Description

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_web_metric_collection

Required

true

Spark Properties in Cloudera Runtime 7.3.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name

Default Value

/etc/spark

API Name

client_config_root_dir

Required

true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf

Description

For advanced use only, a string to be inserted into the client configuration for spark-conf/spark-defaults.conf.

Related Name

Default Value

API Name

spark-conf/spark-defaults.conf_client_config_safety_valve

Required

false

Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh**Description**

For advanced use only, a string to be inserted into the client configuration for spark-conf/spark-env.sh.

Related Name**Default Value****API Name**

spark-conf/spark-env.sh_client_config_safety_valve

Required

false

Logs**Gateway Logging Threshold****Description**

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

51

API Name

client_config_priority

Required

true

Spark Data Serializer**Description**

Name of class implementing org.apache.spark.serializer.Serializer to use in Spark applications.

Related Name

spark.serializer

Default Value

org.apache.spark.serializer.KryoSerializer

API Name

spark_data_serializer

Required

true

Default Application Deploy Mode**Description**

Which deploy mode to use by default. Can be overridden by users when launching applications.

Related Name

spark_deploy_mode

Default Value

client

API Name

spark_deploy_mode

Required

false

Caching Executor Idle Timeout**Description**

When dynamic allocation is enabled, time after which idle executors with cached RDDs blocks will be stopped. By default, they're never stopped.

Related Name

spark.dynamicAllocation.cachedExecutorIdleTimeout

Default Value**API Name**

spark_dynamic_allocation_cached_idle_timeout

Required

false

Enable Dynamic Allocation

Description

Enable dynamic allocation of executors in Spark applications.

Related Name

spark.dynamicAllocation.enabled

Default Value

true

API Name

spark_dynamic_allocation_enabled

Required

false

Executor Idle Timeout

Description

When dynamic allocation is enabled, time after which idle executors will be stopped.

Related Name

spark.dynamicAllocation.executorIdleTimeout

Default Value

1 minute(s)

API Name

spark_dynamic_allocation_idle_timeout

Required

false

Initial Executor Count

Description

When dynamic allocation is enabled, number of executors to allocate when the application starts. By default, this is the same value as the minimum number of executors.

Related Name

spark.dynamicAllocation.initialExecutors

Default Value**API Name**

spark_dynamic_allocation_initial_executors

Required

false

Maximum Executor Count

Description

When dynamic allocation is enabled, maximum number of executors to allocate. By default, Spark relies on YARN to control the maximum number of executors for the application.

Related Name

spark.dynamicAllocation.maxExecutors

Default Value**API Name**

spark_dynamic_allocation_max_executors

Required

false

Minimum Executor Count**Description**

When dynamic allocation is enabled, minimum number of executors to keep alive while the application is running.

Related Name

spark.dynamicAllocation.minExecutors

Default Value

0

API Name

spark_dynamic_allocation_min_executors

Required

false

Scheduler Backlog Timeout**Description**

When dynamic allocation is enabled, timeout before requesting new executors when there are backlogged tasks.

Related Name

spark.dynamicAllocation.schedulerBacklogTimeout

Default Value

1 second(s)

API Name

spark_dynamic_allocation_scheduler_backlog_timeout

Required

false

Sustained Scheduler Backlog Timeout**Description**

When dynamic allocation is enabled, timeout before requesting new executors after the initial backlog timeout has already expired. By default this is the same value as the initial backlog timeout.

Related Name

spark.dynamicAllocation.sustainedSchedulerBacklogTimeout

Default Value**API Name**

spark_dynamic_allocation_sustained_scheduler_backlog_timeout

Required

false

Shell Logging Threshold**Description**

The minimum log level for the Spark shell.

Related Name

spark_gateway_shell_logging_threshold

Default Value

WARN

API Name

spark_gateway_shell_logging_threshold

Required

true

Enable Kill From UI**Description**

Whether to allow users to kill running stages from the Spark Web UI.

Related Name

spark.ui.killEnabled

Default Value

true

API Name

spark_gateway_ui_kill_enabled

Required

true

Enable History**Description**

Write Spark application history logs to HDFS.

Related Name

spark.eventLog.enabled

Default Value

true

API Name

spark_history_enabled

Required

false

Enable I/O Encryption**Description**

Whether to encrypt temporary shuffle and cache files stored by Spark on the local disks.

Related Name

spark.io.encryption.enabled

Default Value

false

API Name

spark_io_encryption_enabled

Required

false

Enable Spark Lineage

Description

Whether to enable spark lineage support. If enabled, spark lineage is sent to Atlas.

Related Name

spark.lineage.enabled

Default Value

true

API Name

spark_lineage_enabled

Required

false

Enable Network Encryption

Description

Whether to encrypt communication between Spark processes belonging to the same application. Requires authentication (spark.authenticate) to be enabled.

Related Name

spark.network.crypto.enabled

Default Value

false

API Name

spark_network_encryption_enabled

Required

false

Enable Optimized S3 Committers

Description

Whether use optimized committers when writing data to S3.

Related Name

spark.cloudera.s3_committers.enabled

Default Value

true

API Name

spark_optimized_s3_committers_enabled

Required

false

Extra Python Path

Description

Python library paths to add to PySpark applications.

Related Name

spark_python_path

Default Value**API Name**

`spark_python_path`**Required**

false

Enable Shuffle Service**Description**

Enables the external shuffle service. The external shuffle service preserves shuffle files written by executors so that the executors can be deallocated without losing work. Must be enabled if Enable Dynamic Allocation is enabled. Recommended and enabled by default.

Related Name`spark.shuffle.service.enabled`**Default Value**

true

API Name`spark_shuffle_service_enabled`**Required**

true

Enable Spark Web UI**Description**

Whether to enable the Spark Web UI on individual applications. It's recommended that the UI be disabled in secure clusters.

Related Name`spark.ui.enabled`**Default Value**

true

API Name`spark_ui_enabled`**Required**

false

A comma-separated list of secure Hadoop filesystems**Description**

A comma-separated list of secure Hadoop filesystems your Spark application is going to access. For example, `hdfs://nn1.com:8032,hdfs://nn2.com:8032`. The Spark application must have access to the filesystems listed and Kerberos must be properly configured to be able to access them (either in the same realm or in a trusted realm). Spark acquires security tokens for each of the filesystems so that the Spark application can access those remote Hadoop filesystems.

Related Name`spark.yarn.access.hadoopFileSystems`**Default Value****API Name**`spark_yarn_access_hadoopfilesystems`**Required**

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf parameter.

Related Name

Default Value

false

API Name

role_config_suppression_spark-conf/spark-defaults.conf_client_config_safety_valve

Required

true

Suppress Parameter Validation: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_spark-conf/spark-env.sh_client_config_safety_valve

Required

true

Suppress Parameter Validation: Spark Data Serializer**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Data Serializer parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_spark_data_serializer

Required

true

Suppress Parameter Validation: Extra Python Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Extra Python Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_spark_python_path

Required

true

Suppress Parameter Validation: A comma-separated list of secure Hadoop filesystems

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the A comma-separated list of secure Hadoop filesystems parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_spark_yarn_access_hadoopfilesystems

Required

true

History Server

Advanced

History Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

Description

For advanced use only. A string to be inserted into spark-conf/spark-env.sh for this role only.

Related Name**Default Value**

API Name

spark-conf/spark-env.sh_role_safety_valve

Required

false

History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-history-server.conf

Description

For advanced use only. A string to be inserted into spark-conf/spark-history-server.conf for this role only.

Related Name

Default Value

API Name

spark-conf/spark-history-server.conf_role_safety_valve

Required

false

History Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

SPARK_YARN_HISTORY_SERVER_role_env_safety_valve

Required

false

Logs

History Server Log Directory

Description

The log directory for log files of the role History Server.

Related Name

log_dir

Default Value

/var/log/spark

API Name

log_dir

Required

false

History Server Logging Threshold

Description

The minimum log level for History Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

History Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for History Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

History Server Max Log Size**Description**

The maximum size, in megabytes, per log file for History Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

`log_directory_free_space_absolute_thresholds`**Required**

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name`log_directory_free_space_percentage_thresholds`**Required**

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**`monitoring_metric_filter`**Required**

false

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

otelcol_exporters

Required

false

OpenTelemetry Collector Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

otelcol_extensions

Required

false

OpenTelemetry Collector Helper Port

Description

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value****API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value**API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify \$INFRA(cdp_request_signer_password) when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL**Description**

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

```
$INFRA(cdp_request_signer_url)
```

API Name

```
otelcol_remote_write_url
```

Required

```
false
```

OpenTelemetry Collector Remote Write Username**Description**

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_user)` expression. Specify `$INFRA(cdp_request_signer_username)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

```
$INFRA(cdp_request_signer_username)
```

API Name

```
otelcol_remote_write_user
```

Required

```
false
```

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section**Description**

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

```
common.process.swap_memory_rate_window
```

Default Value

```
5 minute(s)
```

API Name

```
process_swap_memory_rate_window
```

Required

```
false
```

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

```
Warning: 200 B, Critical: Never
```

API Name

```
process_swap_memory_thresholds
```

Required

```
false
```

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

```
[]
```

API Name

```
role_triggers
```

Required

true

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

spark_yarn_history_server_fd_thresholds

Required

false

History Server Host Health Test**Description**

When computing the overall History Server health, consider the host's health.

Related Name**Default Value**

true

API Name

spark_yarn_history_server_host_health_enabled

Required

false

History Server Process Health Test**Description**

Enables the health test that the History Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

spark_yarn_history_server_scm_health_enabled

Required

false

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Use Local Storage

Description

Whether to use local storage for caching application history data, which reduces memory usage and makes service restarts faster.

Related Name

enable_local_storage

Default Value

false

API Name

enable_local_storage

Required

false

Enable Event Log Cleaner

Description

Specifies whether the History Server should periodically clean up event logs from storage.

Related Name

spark.history.fs.cleaner.enabled

Default Value

true

API Name

event_log_cleaner_enabled

Required

false

Event Log Cleaner Interval

Description

How often the History Server will clean up event log files.

Related Name

spark.history.fs.cleaner.interval

Default Value

1 day(s)

API Name

event_log_cleaner_interval

Required

false

Maximum Event Log Age

Description

Specifies the maximum age of the event logs.

Related Name

spark.history.fs.cleaner.maxAge

Default Value

7 day(s)

API Name

event_log_cleaner_max_age

Required

false

Admin Users

Description

Comma-separated list of users who can view all applications when authentication is enabled.

Related Name

spark.history.ui.admin.acls

Default Value

knox

API Name

history_server_admin_users

Required

false

HDFS Polling Interval

Description

How often to poll HDFS for new applications.

Related Name

spark.history.fs.update.interval.seconds

Default Value

10 second(s)

API Name

history_server_fs_poll_interval

Required

false

Java Heap Size of History Server in Bytes**Description**

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in bytes.

Related Name

history_server_max_heapsize

Default Value

512 MiB

API Name

history_server_max_heapsize

Required

true

Retained App Count**Description**

Max number of application UIs to keep in the History Server's memory. All applications will still be available, but may take longer to load if they're not in memory.

Related Name

spark.history.retainedApplications

Default Value

50

API Name

history_server_retained_apps

Required

false

Enable User Authentication**Description**

Enables user authentication using SPNEGO (requires Kerberos), and enables access control to application history data.

Related Name

history_server_spnego_enabled

Default Value

false

API Name

history_server_spnego_enabled

Required

false

Local Storage Directory**Description**

Directory where to keep local caches of application history data.

Related Name`spark.history.store.path`**Default Value**`/var/lib/spark/history`**API Name**`local_storage_dir`**Required**`false`**Max Local Storage Size****Description**

Approximate maximum amount of data to use in local storage for caching application history data.

Related Name`spark.history.store.maxDiskUsage`**Default Value**`10 GiB`**API Name**`local_storage_max_usage`**Required**`false`**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**`rlimit_fds`**Required**`false`**Ports and Addresses****History Server WebUI Port****Description**

The port of the history server WebUI

Related Name`spark.history.ui.port`**Default Value**`18088`**API Name**`history_server_web_port`

Required

true

TLS/SSL Port Number**Description**

Port where to listen for TLS/SSL connections. HTTP connections will be redirected to this port when TLS/SSL is enabled.

Related Name

spark.ssl.historyServer.port

Default Value

18488

API Name

ssl_server_port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

`rm_memory_soft_limit_v1`**Required**`true`**Cgroup V2 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.high`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v2`**Required**`true`**Security****Enable TLS/SSL for History Server****Description**

Encrypt communication between clients and History Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name`spark.ssl.historyServer.enabled`**Default Value**`false`**API Name**`ssl_enabled`**Required**`false`**History Server TLS/SSL Server Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when History Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name`spark.ssl.historyServer.keyStore`**Default Value****API Name**`ssl_server_keystore_location`

Required

false

History Server TLS/SSL Server Keystore File Password**Description**

The password for the History Server keystore file.

Related Name**Default Value****API Name**

ssl_server_keystore_password

Required

false

Supported SSL/TLS versions**Description**

The SSL/TLS protocol versions to accept HTTPS connections from. Note that the available cipher suites also affect which protocol versions can be negotiated, and some cipher suites are only available in higher versions.

Related Name

spark.ssl.historyServer.protocol

Default Value

TLSv1.2

API Name

supported_tls_versions

Required

false

SSL/TLS Cipher Suite**Description**

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

Related Name

Default Value

modern2018

API Name

tls_ciphers

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Admin Users**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Users parameter.

Spark Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

SPARK_ON_YARN_service_env_safety_valve

Required

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Healthy History Server Monitoring Thresholds**Description**

The health test thresholds of the overall History Server health. The check returns "Concerning" health if the percentage of "Healthy" History Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" History Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 90.0 %

API Name

SPARK_ON_YARN_SPARK_YARN_HISTORY_SERVER_healthy_thresholds

Required

false

Other**Atlas Service****Description**

Name of the Atlas service that this Spark service instance depends on

Related Name**Default Value****API Name**

atlas_service

Required

false

HBase Service**Description**

Name of the HBase service that this Spark service instance depends on

Related Name**Default Value****API Name**

hbase_service

Required

false

History Server Load Balancer Address

Description

The URI of the History server's load balancer used by clients. Example: https://lb.example.com:port

Related Name

spark.history.lb.uri

Default Value**API Name**

history_server_load_balancer_url

Required

false

Knox Service

Description

Name of the Knox service that this Spark service instance depends on

Related Name**Default Value****API Name**

knox_service

Required

false

Spark Authentication

Description

Enable whether the Spark communication protocols do authentication using a shared secret.

Related Name

spark.authenticate

Default Value

false

API Name

spark_authenticate

Required

true

Spark Driver Log Location (HDFS)

Description

The location of Spark driver logs in HDFS when Spark application runs in client mode. Changing this value will not move existing logs to the new location.

Related Name

spark.driver.log.dir

Default Value

/user/spark/driverLogs

API Name

spark_driver_log_dir

Required

true

Persist Driver Logs to Dfs

Description

If enabled, driver logs in YARN client mode will be persisted to the configured Spark Driver Log Location (HDFS)

Related Name

spark.driver.log.persistToDfs.enabled

Default Value

true

API Name

spark_driver_log_persist_to_df

Required

true

Spark History Location

Description

The location of Spark application history logs. Changing this value will not move existing logs to the new location.

Related Name

spark.eventLog.dir

Default Value

hdfs:///user/spark/applicationHistory

API Name

spark_history_log_dir

Required

true

Shuffle Service AES Encryption

Description

Whether to enable AES-based authentication and encryption in the shuffle service. Requires authentication to be enabled to take effect.

Related Name

spark_shuffle_aes_enabled

Default Value

true

API Name

spark_shuffle_aes_enabled

Required

true

YARN Service

Description

Name of the YARN service that this Spark service instance depends on

Related Name

Default Value**API Name**

yarn_service

Required

true

Ports and Addresses**Spark Shuffle Service Port****Description**

The port the Spark Shuffle Service listens for fetch requests.

Related Name

spark.shuffle.service.port

Default Value

7337

API Name

spark_shuffle_service_port

Required

true

Security**Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

spark

API Name

kerberos_princ_name

Required

true

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory

Description

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: Admin Users

Description

Whether to suppress configuration warnings produced by the Admin Users configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_history_server_admin_users

Required

true

Suppress Configuration Validator: History Server WebUI Port

Description

Whether to suppress configuration warnings produced by the History Server WebUI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_history_server_web_port

Required

true

Suppress Configuration Validator: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the JMX Exporter configuration YAML configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Configuration Validator: Local Storage Directory

Description

Whether to suppress configuration warnings produced by the Local Storage Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_local_storage_dir

Required

true

Suppress Configuration Validator: History Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the History Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: History Server Log Directory

Description

Whether to suppress configuration warnings produced by the History Server Log Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Helper Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Processors Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Receivers Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write URL configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Service Section configuration validator.

Related Name

Default Value

	false
API Name	role_config_suppression_otelcol_service
Required	true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description	Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_rm_custom_resources
Required	true

Suppress Configuration Validator: Role Triggers

Description	Whether to suppress configuration warnings produced by the Role Triggers configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_role_triggers
Required	true

Suppress Configuration Validator: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf

Description	Whether to suppress configuration warnings produced by the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_spark-conf/spark-defaults.conf_client_config_safety_valve
Required	true

Suppress Configuration Validator: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

Description	
--------------------	--

Whether to suppress configuration warnings produced by the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_spark-conf/spark-env.sh_client_config_safety_valve

Required

true

Suppress Configuration Validator: History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

Description

Whether to suppress configuration warnings produced by the History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_spark-conf/spark-env.sh_role_safety_valve

Required

true

Suppress Configuration Validator: History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-history-server.conf

Description

Whether to suppress configuration warnings produced by the History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-history-server.conf configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_spark-conf/spark-history-server.conf_role_safety_valve

Required

true

Suppress Configuration Validator: Spark Data Serializer

Description

Whether to suppress configuration warnings produced by the Spark Data Serializer configuration validator.

Related Name

Default Value

false

API Name

`role_config_suppression_spark_data_serializer`**Required**`true`**Suppress Configuration Validator: Extra Python Path****Description**

Whether to suppress configuration warnings produced by the Extra Python Path configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_spark_python_path`**Required**`true`**Suppress Configuration Validator: A comma-separated list of secure Hadoop filesystems****Description**

Whether to suppress configuration warnings produced by the A comma-separated list of secure Hadoop filesystems configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_spark_yarn_access_hadoopfilesystems`**Required**`true`**Suppress Configuration Validator: History Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the History Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_spark_yarn_history_server_role_env_safety_valve`**Required**`true`**Suppress Configuration Validator: History Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the History Server TLS/SSL Server Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: History Server TLS/SSL Server Keystore File Password**Description**

Whether to suppress configuration warnings produced by the History Server TLS/SSL Server Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: TLS/SSL Port Number**Description**

Whether to suppress configuration warnings produced by the TLS/SSL Port Number configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_port

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: History Server Load Balancer Address

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server Load Balancer Address parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_history_server_load_balancer_url

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Spark Service Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Service Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_spark-conf/spark-env.sh_service_safety_valve

Required

true

Suppress Parameter Validation: Spark Driver Log Location (HDFS)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Driver Log Location (HDFS) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_spark_driver_log_df_dir

Required

true

Suppress Parameter Validation: Spark History Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark History Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_spark_history_log_dir

Required

true

Suppress Configuration Validator: Hive Gateway for Spark Validator**Description**

Whether to suppress configuration warnings produced by the Hive Gateway for Spark Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_spark_hive_gateway_validator

Required

true

Suppress Parameter Validation: Spark Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_spark_on_yarn_service_env_safety_valve

Required

true

Suppress Parameter Validation: Spark Shuffle Service Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Shuffle Service Port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_spark_shuffle_service_port

Required

true

Suppress Configuration Validator: History Server Count Validator**Description**

Whether to suppress configuration warnings produced by the History Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_spark_yarn_history_server_count_validator

Required

true

Suppress Health Test: History Server Health**Description**

Whether to suppress the results of the History Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name	
Default Value	false
API Name	service_health_suppression_spark_on_yarn_spark_yarn_history_server_healthy
Required	true

Spark 3 Properties in Cloudera Runtime 7.3.1

Role groups:

Gateway

Advanced

Deploy Directory

Description	The directory where the client configs will be deployed
Related Name	
Default Value	/etc/spark3
API Name	client_config_root_dir
Required	true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description	For advanced use only, a string to be inserted into log4j2.properties for this role only.
Related Name	
Default Value	
API Name	log4j_safety_valve
Required	false

Spark 3 Client Advanced Configuration Snippet (Safety Valve) for spark3-conf/spark-defaults.conf

Description	For advanced use only, a string to be inserted into the client configuration for spark3-conf/spark-defaults.conf.
Related Name	
Default Value	
API Name	

spark3-conf/spark-defaults.conf_client_config_safety_valve

Required

false

Spark 3 Client Advanced Configuration Snippet (Safety Valve) for spark3-conf/spark-env.sh

Description

For advanced use only, a string to be inserted into the client configuration for spark3-conf/spark-env.sh.

Related Name

Default Value

API Name

spark3-conf/spark-env.sh_client_config_safety_valve

Required

false

Logs

Gateway Logging Threshold

Description

The minimum log level for Gateway logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

51

API Name

client_config_priority

Required

true

Spark Data Serializer**Description**

Name of class implementing `org.apache.spark.serializer.Serializer` to use in Spark applications.

Related Name

spark.serializer

Default Value

`org.apache.spark.serializer.KryoSerializer`

API Name

spark_data_serializer

Required

true

Default Application Deploy Mode**Description**

Which deploy mode to use by default. Can be overridden by users when launching applications.

Related Name

spark_deploy_mode

Default Value

client

API Name

spark_deploy_mode

Required

false

Caching Executor Idle Timeout**Description**

When dynamic allocation is enabled, time after which idle executors with cached RDDs blocks will be stopped. By default, they're never stopped.

Related Name

`spark.dynamicAllocation.cachedExecutorIdleTimeout`

Default Value**API Name**

spark_dynamic_allocation_cached_idle_timeout

Required

false

Enable Dynamic Allocation

Description

Enable dynamic allocation of executors in Spark applications.

Related Name

spark.dynamicAllocation.enabled

Default Value

true

API Name

spark_dynamic_allocation_enabled

Required

false

Executor Idle Timeout

Description

When dynamic allocation is enabled, time after which idle executors will be stopped.

Related Name

spark.dynamicAllocation.executorIdleTimeout

Default Value

1 minute(s)

API Name

spark_dynamic_allocation_idle_timeout

Required

false

Initial Executor Count

Description

When dynamic allocation is enabled, number of executors to allocate when the application starts. By default, this is the same value as the minimum number of executors.

Related Name

spark.dynamicAllocation.initialExecutors

Default Value**API Name**

spark_dynamic_allocation_initial_executors

Required

false

Maximum Executor Count

Description

When dynamic allocation is enabled, maximum number of executors to allocate. By default, Spark relies on YARN to control the maximum number of executors for the application.

Related Name

spark.dynamicAllocation.maxExecutors

Default Value

API Name`spark_dynamic_allocation_max_executors`**Required**

false

Minimum Executor Count**Description**

When dynamic allocation is enabled, minimum number of executors to keep alive while the application is running.

Related Name`spark.dynamicAllocation.minExecutors`**Default Value**

0

API Name`spark_dynamic_allocation_min_executors`**Required**

false

Scheduler Backlog Timeout**Description**

When dynamic allocation is enabled, timeout before requesting new executors when there are backlogged tasks.

Related Name`spark.dynamicAllocation.schedulerBacklogTimeout`**Default Value**

1 second(s)

API Name`spark_dynamic_allocation_scheduler_backlog_timeout`**Required**

false

Sustained Scheduler Backlog Timeout**Description**

When dynamic allocation is enabled, timeout before requesting new executors after the initial backlog timeout has already expired. By default this is the same value as the initial backlog timeout.

Related Name`spark.dynamicAllocation.sustainedSchedulerBacklogTimeout`**Default Value****API Name**`spark_dynamic_allocation_sustained_scheduler_backlog_timeout`**Required**

false

Shell Logging Threshold**Description**

The minimum log level for the Spark shell.

Related Name

spark_gateway_shell_logging_threshold

Default Value

WARN

API Name

spark_gateway_shell_logging_threshold

Required

true

Enable Kill From UI**Description**

Whether to allow users to kill running stages from the Spark Web UI.

Related Name

spark.ui.killEnabled

Default Value

true

API Name

spark_gateway_ui_kill_enabled

Required

true

Enable History**Description**

Write Spark application history logs to HDFS.

Related Name

spark.eventLog.enabled

Default Value

true

API Name

spark_history_enabled

Required

false

Enable Spark Iceberg Support**Description**

Whether to enable Iceberg support for Spark.

Related Name

spark.iceberg.enabled

Default Value

true

API Name

spark_iceberg_support_enabled

Required

false

Enable I/O Encryption

Description

Whether to encrypt temporary shuffle and cache files stored by Spark on the local disks.

Related Name

spark.io.encryption.enabled

Default Value

false

API Name

spark_io_encryption_enabled

Required

false

A comma-separated list of secure Hadoop filesystems

Description

A comma-separated list of secure Hadoop filesystems your Spark application is going to access. For example, hdfs://nn1.com:8032,hdfs://nn2.com:8032. The Spark application must have access to the filesystems listed and Kerberos must be properly configured to be able to access them (either in the same realm or in a trusted realm). Spark acquires security tokens for each of the filesystems so that the Spark application can access those remote Hadoop filesystems.

Related Name

spark.kerberos.access.hadoopFileSystems

Default Value

API Name

spark_kerberos_access_hadoopfilesystems

Required

false

Enable Spark Lineage

Description

Whether to enable spark lineage support. If enabled, spark lineage is sent to Atlas.

Related Name

spark.lineage.enabled

Default Value

true

API Name

spark_lineage_enabled

Required

false

Enable Network Encryption

Description

Whether to encrypt communication between Spark processes belonging to the same application. Requires authentication (spark.authenticate) to be enabled.

Related Name

spark.network.crypto.enabled

Default Value

false

API Name

spark_network_encryption_enabled

Required

false

Enable Optimized S3 Committers**Description**

Whether use optimized committers when writing data to S3.

Related Name

spark.cloudera.s3_committers.enabled

Default Value

true

API Name

spark_optimized_s3_committers_enabled

Required

false

Extra Python Path**Description**

Python library paths to add to PySpark applications.

Related Name

spark_python_path

Default Value**API Name**

spark_python_path

Required

false

Enable Shuffle Service**Description**

Enables the external shuffle service. The external shuffle service preserves shuffle files written by executors so that the executors can be deallocated without losing work. Must be enabled if Enable Dynamic Allocation is enabled. Recommended and enabled by default.

Related Name

spark.shuffle.service.enabled

Default Value

true

API Name

spark_shuffle_service_enabled

Required

true

Enable Spark Web UI

Description

Whether to enable the Spark Web UI on individual applications. It's recommended that the UI be disabled in secure clusters.

Related Name

spark.ui.enabled

Default Value

true

API Name

spark_ui_enabled

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

	false
API Name	role_config_suppression_log4j_safety_valve
Required	true

Suppress Parameter Validation: Spark 3 Client Advanced Configuration Snippet (Safety Valve) for spark3-conf/spark-defaults.conf

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark 3 Client Advanced Configuration Snippet (Safety Valve) for spark3-conf/spark-defaults.conf parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_spark3-conf/spark-defaults.conf_client_config_safety_valve
Required	true

Suppress Parameter Validation: Spark 3 Client Advanced Configuration Snippet (Safety Valve) for spark3-conf/spark-env.sh

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark 3 Client Advanced Configuration Snippet (Safety Valve) for spark3-conf/spark-env.sh parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_spark3-conf/spark-env.sh_client_config_safety_valve
Required	true

Suppress Parameter Validation: Spark Data Serializer

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Data Serializer parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_spark_data_serializer
Required	true

Suppress Parameter Validation: A comma-separated list of secure Hadoop filesystems**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the A comma-separated list of secure Hadoop filesystems parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_spark_kerberos_access_hadoopfilesystems

Required

true

Suppress Parameter Validation: Extra Python Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Extra Python Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_spark_python_path

Required

true

History Server**Advanced****History Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

History Server Advanced Configuration Snippet (Safety Valve) for spark3-conf/spark-env.sh

Description

For advanced use only. A string to be inserted into spark3-conf/spark-env.sh for this role only.

Related Name

Default Value

API Name

spark3-conf/spark-env.sh_role_safety_valve

Required

false

History Server Advanced Configuration Snippet (Safety Valve) for spark3-conf/spark-history-server.conf

Description

For advanced use only. A string to be inserted into spark3-conf/spark-history-server.conf for this role only.

Related Name

Default Value

API Name

spark3-conf/spark-history-server.conf_role_safety_valve

Required

false

History Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

SPARK3_YARN_HISTORY_SERVER_role_env_safety_valve

Required

false

Logs

History Server Log Directory

Description

The log directory for log files of the role History Server.

Related Name

log_dir

Default Value

/var/log/spark3

API Name

log_dir

Required

false

History Server Logging Threshold**Description**

The minimum log level for History Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

History Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for History Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

History Server Max Log Size**Description**

The maximum size, in megabytes, per log file for History Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

`jmx_exporter_yaml`**Required**

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name`log_directory_free_space_absolute_thresholds`**Required**

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name`log_directory_free_space_percentage_thresholds`**Required**

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.

- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

`otelcol_extensions`

Required

`false`

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name

Default Value

API Name

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name

Default Value

API Name

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password

Description

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify \$INFRA(cdp_request_signer_password) when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name

Default Value

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

\$INFRA(cdp_request_signer_url)

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

spark3_yarn_history_server_fd_thresholds

Required

false

History Server Host Health Test**Description**

When computing the overall History Server health, consider the host's health.

Related Name**Default Value**

true

API Name

spark3_yarn_history_server_host_health_enabled

Required

false

History Server Process Health Test**Description**

Enables the health test that the History Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

spark3_yarn_history_server_scm_health_enabled

Required

false

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Use Local Storage****Description**

Whether to use local storage for caching application history data, which reduces memory usage and makes service restarts faster.

Related Name

enable_local_storage

Default Value

false

API Name

enable_local_storage

Required

false

Enable Event Log Cleaner**Description**

Specifies whether the History Server should periodically clean up event logs from storage.

Related Name`spark.history.fs.cleaner.enabled`**Default Value**`true`**API Name**`event_log_cleaner_enabled`**Required**`false`**Event Log Cleaner Interval****Description**

How often the History Server will clean up event log files.

Related Name`spark.history.fs.cleaner.interval`**Default Value**`1 day(s)`**API Name**`event_log_cleaner_interval`**Required**`false`**Maximum Event Log Age****Description**

Specifies the maximum age of the event logs.

Related Name`spark.history.fs.cleaner.maxAge`**Default Value**`7 day(s)`**API Name**`event_log_cleaner_max_age`**Required**`false`**Admin Users****Description**

Comma-separated list of users who can view all applications when authentication is enabled.

Related Name`spark.history.ui.admin.acls`**Default Value**`knox`**API Name**`history_server_admin_users`**Required**`false`

HDFS Polling Interval

Description

How often to poll HDFS for new applications.

Related Name

spark.history.fs.update.interval.seconds

Default Value

10 second(s)

API Name

history_server_fs_poll_interval

Required

false

Java Heap Size of History Server in Bytes

Description

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in bytes.

Related Name

history_server_max_heapsize

Default Value

512 MiB

API Name

history_server_max_heapsize

Required

true

Retained App Count

Description

Max number of application UIs to keep in the History Server's memory. All applications will still be available, but may take longer to load if they're not in memory.

Related Name

spark.history.retainedApplications

Default Value

50

API Name

history_server_retained_apps

Required

false

Enable User Authentication

Description

Enables user authentication using SPNEGO (requires Kerberos), and enables access control to application history data.

Related Name

history_server_spnego_enabled

Default Value

false

API Name

history_server_spnego_enabled

Required

false

Local Storage Directory**Description**

Directory where to keep local caches of application history data.

Related Name

spark.history.store.path

Default Value

/var/lib/spark3/history

API Name

local_storage_dir

Required

false

Max Local Storage Size**Description**

Approximate maximum amount of data to use in local storage for caching application history data.

Related Name

spark.history.store.maxDiskUsage

Default Value

10 GiB

API Name

local_storage_max_usage

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**History Server WebUI Port****Description**

The port of the history server WebUI

Related Name

spark.history.ui.port

Default Value

18089

API Name

history_server_web_port

Required

true

TLS/SSL Port Number**Description**

Port where to listen for TLS/SSL connections. HTTP connections will be redirected to this port when TLS/SSL is enabled.

Related Name

spark.ssl.historyServer.port

Default Value

18489

API Name

ssl_server_port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100	
API Name	rm_io_weight
Required	true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

ssl_server_keystore_password

Required

false

Supported SSL/TLS versions**Description**

The SSL/TLS protocol versions to accept HTTPS connections from. Note that the available cipher suites also affect which protocol versions can be negotiated, and some cipher suites are only available in higher versions.

Related Name

spark.ssl.historyServer.protocol

Default Value

TLSv1.2

API Name

supported_tls_versions

Required

false

SSL/TLS Cipher Suite**Description**

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Admin Users

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Users parameter.

Related Name

Default Value

false

API Name

role_config_suppression_history_server_admin_users

Required

true

Suppress Parameter Validation: History Server WebUI Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server WebUI Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_history_server_web_port

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: Local Storage Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Local Storage Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_local_storage_dir

Required

true

Suppress Parameter Validation: History Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: History Server Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

Suppress Parameter Validation: History Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: History Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: TLS/SSL Port Number

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Port Number parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_port

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_spark3_on_yarn_spark3_yarn_history_server_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_spark3_on_yarn_spark3_yarn_history_server_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

`role_health_suppression_spark3_on_yarn_spark3_yarn_history_server_host_health`**Required**

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_spark3_on_yarn_spark3_yarn_history_server_log_directory_free_space`**Required**

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_spark3_on_yarn_spark3_yarn_history_server_otelcol_health`**Required**

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_spark3_on_yarn_spark3_yarn_history_server_scm_health`**Required**

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_spark3_on_yarn_spark3_yarn_history_server_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_spark3_on_yarn_spark3_yarn_history_server_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_spark3_on_yarn_spark3_yarn_history_server_unexpected_exits

Required

true

Service-Wide**Advanced****System Group****Description**

The group that this service's processes should run as.

Related Name

Default Value

spark

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Spark 3 Service Advanced Configuration Snippet (Safety Valve) for spark3-conf/spark-env.sh

Description

For advanced use only, a string to be inserted into spark3-conf/spark-env.sh. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

spark3-conf/spark-env.sh_service_safety_valve

Required

false

Spark 3 Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

SPARK3_ON_YARN_service_env_safety_valve

Required

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

Healthy History Server Monitoring Thresholds

Description

The health test thresholds of the overall History Server health. The check returns "Concerning" health if the percentage of "Healthy" History Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" History Servers falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 90.0 %

API Name

SPARK3_ON_YARN_SPARK3_YARN_HISTORY_SERVER_healthy_thresholds

Required

false

Other

Atlas Service

Description

Name of the Atlas service that this Spark 3 service instance depends on

Related Name

Default Value

API Name

atlas_service

Required

false

HBase Service

Description

Name of the HBase service that this Spark 3 service instance depends on

Related Name

Default Value**API Name**

hbase_service

Required

false

History Server Load Balancer Address**Description**

The URI of the History server's load balancer used by clients. Example: https://lb.example.com:port

Related Name

spark.history.lb.uri

Default Value**API Name**

history_server_load_balancer_url

Required

false

Knox Service**Description**

Name of the Knox service that this Spark 3 service instance depends on

Related Name**Default Value****API Name**

knox_service

Required

false

Spark Authentication**Description**

Enable whether the Spark communication protocols do authentication using a shared secret. If using SPARK_ON_YARN service (i.e. Spark 1 based service), ensure that value of this property is the same in both services.

Related Name

spark.authenticate

Default Value

false

API Name

spark_authenticate

Required

true

Spark Driver Log Location**Description**

The location of Spark driver logs when Spark application runs in client mode. Changing this value will not move existing logs to the new location.

Related Name

spark.driver.log.dfsDir

Default Value

hdfs:///user/spark/driver3Logs

API Name

spark_driver_log_dfs_dir

Required

true

Persist Driver Logs to Dfs**Description**

If enabled, driver logs in YARN client mode will be persisted to the configured Spark Driver Log Location (HDFS)

Related Name

spark.driver.log.persistToDfs.enabled

Default Value

true

API Name

spark_driver_log_persist_to_dfs

Required

true

Spark History Location**Description**

The location of Spark application history logs. Changing this value will not move existing logs to the new location.

Related Name

spark.eventLog.dir

Default Value

hdfs:///user/spark/spark3ApplicationHistory

API Name

spark_history_log_dir

Required

true

Python binary executable**Description**

Python binary executable to use for PySpark in both driver and workers

Related Name

spark_pyspark_executable_path

Default Value

/opt/cloudera/cm-agent/bin/python

API Name

spark_pyspark_executable_path

Required

true

YARN Service**Description**

Name of the YARN service that this Spark 3 service instance depends on

Related Name**Default Value****API Name**

yarn_service

Required

true

Ports and Addresses**Spark Shuffle Service Port****Description**

The port the Spark Shuffle Service listens for fetch requests. If using SPARK_ON_YARN service (i.e. Spark 2 based service), ensure a unique port is given here.

Related Name

spark.shuffle.service.port

Default Value

7447

API Name

spark_shuffle_service_port

Required

true

Security**Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

spark

API Name

kerberos_princ_name

Required

true

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

Default Value

streamsmgmr

API Name

smm_database_user

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

ranger_service

Required

false

Ranger SMM Plugin Conf Path**Description**

Staging directory for Ranger SMM Plugin Configuration. This should generally not be changed.

Related Name

ranger_smm_plugin_conf_path

Default Value

`$CONF_DIR/smm-plugin`

API Name

`ranger_smm_plugin_conf_path`

Required

`true`

Ranger Streams Messaging Manager Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

`ranger.plugin.smm.policy.cache.dir`

Default Value

`/var/lib/ranger/kafka/policy-cache`

API Name

`ranger_smm_plugin_policy_cache_directory`

Required

`true`

Schema Registry Service

Description

Name of the Schema Registry service that this Streams Messaging Manager service instance depends on

Related Name

Default Value

API Name

`schemaregistry_service`

Required

`false`

Streams Messaging Manager Port

Description

The port on which server accepts connections.

Related Name

`streams.messaging.manager.port`

Default Value

`8585`

API Name

`streams.messaging.manager.port`

Required

`true`

Enable SPNEGO Authentication

Description

Enables the SPNEGO authentication mechanism with Kerberos for the Streams Messaging Manager.

Related Name

streams.messaging.manager.spnego.enabled

Default Value

true

API Name

streams.messaging.manager.spnego.enabled

Required

false

Streams Messaging Manager port (SSL)

Description

HTTPS port Streams Messaging Manager rest server runs on when SSL is enabled.

Related Name

streams.messaging.manager.ssl.port

Default Value

8587

API Name

streams.messaging.manager.ssl.port

Required

false

STREAMS_REPLICATION_MANAGER Service

Description

Name of the STREAMS_REPLICATION_MANAGER service that this Streams Messaging Manager service instance depends on

Related Name

Default Value

API Name

streams_replication_manager_service

Required

false

Security

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name

Default Value

streamsmgmgr

API Name

kerberos_princ_name

Required

true

Suppressions

Suppress Configuration Validator: Cache Control Http Response Header Value

Description

Whether to suppress configuration warnings produced by the Cache Control Http Response Header Value configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cache.control.http.response.header.value

Required

true

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Cloudera Manager Metrics TrustStore Type

Description

Whether to suppress configuration warnings produced by the Cloudera Manager Metrics TrustStore Type configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cm.metrics.truststore.type

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json configuration validator.

Related Name**Default Value**

false

API Name
role_config_suppression_config.json_role_safety_valve

Required
true

Suppress Configuration Validator: consumer.group.refresh.interval.ms

Description
Whether to suppress configuration warnings produced by the consumer.group.refresh.interval.ms configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_consumer.group.refresh.interval.ms

Required
true

Suppress Configuration Validator: Cruise Control Client Connect timeout

Description
Whether to suppress configuration warnings produced by the Cruise Control Client Connect timeout configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_cruise.control.client.connect.timeout

Required
true

Suppress Configuration Validator: Cruise Control Client Read timeout

Description
Whether to suppress configuration warnings produced by the Cruise Control Client Read timeout configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_cruise.control.client.read.timeout

Required
true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_env.sh_role_safety_valve

Required

true

Suppress Configuration Validator: Inactive Group Timeout

Description

Whether to suppress configuration warnings produced by the Inactive Group Timeout configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_inactive.group.timeout.ms

Required

true

Suppress Configuration Validator: inactive.producer.timeout.ms

Description

Whether to suppress configuration warnings produced by the inactive.producer.timeout.ms configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_inactive.producer.timeout.ms

Required

true

Suppress Configuration Validator: Percentage Of Cores Used For Querying By Metrics Index Cache

Description

Whether to suppress configuration warnings produced by the Percentage Of Cores Used For Querying By Metrics Index Cache configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_index.querying.threads.percentage

Required

true

Suppress Configuration Validator: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the JMX Exporter configuration YAML configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Configuration Validator: Kafka Connect Client Connect timeout

Description

Whether to suppress configuration warnings produced by the Kafka Connect Client Connect timeout configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.client.connect.timeout

Required

true

Suppress Configuration Validator: Kafka Connect Client Read timeout

Description

Whether to suppress configuration warnings produced by the Kafka Connect Client Read timeout configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.client.read.timeout

Required

true

Suppress Configuration Validator: Kafka Connect Rest HostPorts

Description

Whether to suppress configuration warnings produced by the Kafka Connect Rest HostPorts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.hostports

Required

true

Suppress Configuration Validator: Kafka Connect Plugin Sample Configuration Path

Description

Whether to suppress configuration warnings produced by the Kafka Connect Plugin Sample Configuration Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.plugin.sample.configs.path

Required

true

Suppress Configuration Validator: LatencyMetricsConfig Metrics 15m Ttl Secs

Description

Whether to suppress configuration warnings produced by the LatencyMetricsConfig Metrics 15m Ttl Secs configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_latencymetricsconfig.metrics.15m.ttl.secs

Required

true

Suppress Configuration Validator: LatencyMetricsConfig Metrics Clean Frequency ms

Description

Whether to suppress configuration warnings produced by the LatencyMetricsConfig Metrics Clean Frequency ms configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_latencymetricsconfig.metrics.clean.frequency.ms

Required

true

Suppress Configuration Validator: Latency Metrics Data Storage Path

Description

Whether to suppress configuration warnings produced by the Latency Metrics Data Storage Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_latencymetricsconfig.metrics.storage

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Log Directory

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Log Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server XML Override

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server XML Override configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Configuration Validator: Metrics Cache Refresh Interval ms

Description

Whether to suppress configuration warnings produced by the Metrics Cache Refresh Interval ms configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.cache.refresh.interval.ms

Required

true

Suppress Configuration Validator: Metrics Fetcher Class

Description

Whether to suppress configuration warnings produced by the Metrics Fetcher Class configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.fetcher.class

Required

true

Suppress Configuration Validator: Number of Metrics Fetcher Threads

Description

Whether to suppress configuration warnings produced by the Number of Metrics Fetcher Threads configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.fetcher.threads

Required

true

Suppress Configuration Validator: Percentage Of Cores Used For Querying By Metrics Cache

Description

Whether to suppress configuration warnings produced by the Percentage Of Cores Used For Querying By Metrics Cache configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.querying.threads.percentage

Required

true

Suppress Configuration Validator: NiFi Stateless Extensions Directory

Description

Whether to suppress configuration warnings produced by the NiFi Stateless Extensions Directory configuration validator.

Related Name**Default Value**

false

API Name

`role_config_suppression_nifi.stateless.extensions.directory`**Required**

true

Suppress Configuration Validator: NiFi Stateless Flow Definitions Directory**Description**

Whether to suppress configuration warnings produced by the NiFi Stateless Flow Definitions Directory configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_nifi.stateless.flow.definitions.directory`**Required**

true

Suppress Configuration Validator: NiFi Stateless krb5 File**Description**

Whether to suppress configuration warnings produced by the NiFi Stateless krb5 File configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_nifi.stateless.krb5.file`**Required**

true

Suppress Configuration Validator: NiFi Stateless Nexus URL**Description**

Whether to suppress configuration warnings produced by the NiFi Stateless Nexus URL configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_nifi.stateless.nexus.url`**Required**

true

Suppress Configuration Validator: NiFi Stateless Working Directory**Description**

Whether to suppress configuration warnings produced by the NiFi Stateless Working Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_nifi.stateless.working.directory

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Helper Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write URL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Service Section**Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Service Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Configuration Validator: Prometheus Password**Description**

Whether to suppress configuration warnings produced by the Prometheus Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_prometheus.metrics.password

Required

true

Suppress Configuration Validator: Prometheus Metrics URL**Description**

Whether to suppress configuration warnings produced by the Prometheus Metrics URL configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_prometheus.metrics.url

Required

true

Suppress Configuration Validator: Prometheus User**Description**

Whether to suppress configuration warnings produced by the Prometheus User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_prometheus.metrics.user

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-audit.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-security.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for schema-registry-client-ssl-config.yaml**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for schema-registry-client-ssl-config.yaml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_schema-registry-client-ssl-config.yaml_role_safety_valve

Required

true

Suppress Configuration Validator: Java Heap Size of SMM**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of SMM configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_smm_heap_size

Required

true

Suppress Configuration Validator: SMM_JMX_OPTS

Description

Whether to suppress configuration warnings produced by the SMM_JMX_OPTS configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_smm_jmx_opts

Required

true

Suppress Configuration Validator: SMM_JVM_PERF_OPTS

Description

Whether to suppress configuration warnings produced by the SMM_JVM_PERF_OPTS configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_smm_jvm_perf_opts

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for srm-client-auth-config.yaml

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for srm-client-auth-config.yaml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_srm-client-auth-config.yaml_role_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for srm-client-config.yaml

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for srm-client-config.yaml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_srm-client-config.yaml_role_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for srm-client-ssl-config.yaml

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for srm-client-ssl-config.yaml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_srm-client-ssl-config.yaml_role_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

	false
API Name	role_config_suppression_ssl_client_truststore_password
Required	true

Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format)

Description	Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format) configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_ssl_server_ca_certificate_location
Required	true

Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format)

Description	Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format) configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_ssl_server_certificate_location
Required	true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore Key Password

Description	Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore Key Password configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_ssl_server_keystore_keypassword
Required	true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_privatekey_location

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Private Key Password

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Private Key Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_privatekey_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams-messaging-manager.yaml_role_safety_valve

Required

true

Suppress Configuration Validator: Allow All Alert Notifications

Description

Whether to suppress configuration warnings produced by the Allow All Alert Notifications configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.allow.all.alert.notifications

Required

true

Suppress Configuration Validator: Allowed resources**Description**

Whether to suppress configuration warnings produced by the Allowed resources configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.allowed.resources

Required

true

Suppress Configuration Validator: Replication Factor for Internal Topics**Description**

Whether to suppress configuration warnings produced by the Replication Factor for Internal Topics configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.internal.topics.replication.factor

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.keyStore**Description**

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.keyStore configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.keystore

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.keyStorePassword**Description**

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.keyStorePassword configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.keystorepassword

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.keyStoreType

Description

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.keyStoreType configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.keystoretype

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.trustStore

Description

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.trustStore configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.truststore

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.trustStorePassword

Description

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.trustStorePassword configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.truststorepassword

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.trustStoreType

Description

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.trustStoreType configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.truststoretype

Required

true

Suppress Configuration Validator: Java Home Path Override

Description

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.jdk.home

Required

true

Suppress Configuration Validator: Kafka Alert Notification Topic

Description

Whether to suppress configuration warnings produced by the Kafka Alert Notification Topic configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kafka.alert.notifications.topic

Required

true

Suppress Configuration Validator: Kafka Cache Refresh Interval ms

Description

Whether to suppress configuration warnings produced by the Kafka Cache Refresh Interval ms configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kafka.cache.refresh.interval.ms

Required

true

Suppress Configuration Validator: Kerberos Name Rules

Description

Whether to suppress configuration warnings produced by the Kerberos Name Rules configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.name.rules

Required

true

Suppress Configuration Validator: Kerberos Non Browser User Agents

Description

Whether to suppress configuration warnings produced by the Kerberos Non Browser User Agents configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.non.browser.user.agents

Required

true

Suppress Configuration Validator: Oracle TLS oracle.net.authentication_services

Description

Whether to suppress configuration warnings produced by the Oracle TLS oracle.net.authentication_services configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.authentication_services

Required

true

Suppress Configuration Validator: Oracle TLS oracle.net.ssl_cipher_suites

Description

Whether to suppress configuration warnings produced by the Oracle TLS oracle.net.ssl_cipher_suites configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.ssl_cipher_suites

Required

true

Suppress Configuration Validator: oracle.net.ssl_version

Description

Whether to suppress configuration warnings produced by the oracle.net.ssl_version configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.ssl_version

Required

true

Suppress Configuration Validator: Streams Messaging Manager NotifierProviders Config Classes

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager NotifierProviders Config Classes configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.providerclasses

Required

true

Suppress Configuration Validator: Save Notification Read Status Per User

Description

Whether to suppress configuration warnings produced by the Save Notification Read Status Per User configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.save.notification.read.status.per.user

Required

true

Suppress Configuration Validator: Servlet filter

Description

Whether to suppress configuration warnings produced by the Servlet filter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.servlet.filter

Required

true

Suppress Configuration Validator: Excluded SSL/TLS Cipher Suites

Description

Whether to suppress configuration warnings produced by the Excluded SSL/TLS Cipher Suites configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.excludedciphersuites

Required

true

Suppress Configuration Validator: Excluded SSL/TLS Protocols

Description

Whether to suppress configuration warnings produced by the Excluded SSL/TLS Protocols configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.excludedprotocols

Required

true

Suppress Configuration Validator: SSL Keystore Type

Description

Whether to suppress configuration warnings produced by the SSL Keystore Type configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.keystoretype

Required

true

Suppress Configuration Validator: Supported SSL/TLS Cipher Suites

Description

Whether to suppress configuration warnings produced by the Supported SSL/TLS Cipher Suites configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.supportedciphersuites

Required

true

Suppress Configuration Validator: Supported SSL/TLS Protocols

Description

Whether to suppress configuration warnings produced by the Supported SSL/TLS Protocols configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.supportedprotocols

Required

true

Suppress Configuration Validator: SSL TrustStore Type

Description

Whether to suppress configuration warnings produced by the SSL TrustStore Type configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.truststoretype

Required

true

Suppress Configuration Validator: SSL ValidateCerts

Description

Whether to suppress configuration warnings produced by the SSL ValidateCerts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatecerts

Required

true

Suppress Configuration Validator: SSL validatePeers

Description

Whether to suppress configuration warnings produced by the SSL validatePeers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatepeers

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Port

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ui.port

Required

true

Suppress Configuration Validator: Streams Messaging Manager Configuration Directory

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Configuration Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.working.directory

Required

true

Suppress Configuration Validator: Streams Replication Manager Basic Authentication Password

Description

Whether to suppress configuration warnings produced by the Streams Replication Manager Basic Authentication Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.manual.basic.auth.password

Required

true

Suppress Configuration Validator: Streams Replication Manager Basic Authentication Username

Description

Whether to suppress configuration warnings produced by the Streams Replication Manager Basic Authentication Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.manual.basic.auth.username

Required

true

Suppress Configuration Validator: Streams Replication Manager Rest HostPorts

Description

Whether to suppress configuration warnings produced by the Streams Replication Manager Rest HostPorts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.manual.hostports

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams_messaging_manager_server_role_env_safety_valve

Suppress Parameter Validation: Streams Messaging Manager Database User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smm_database_user

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Streams Messaging Manager Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_streams_messaging_manager.port

Required

true

Suppress Parameter Validation: Streams Messaging Manager port (SSL)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager port (SSL) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_streams_messaging_manager.ssl.port

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_streams_messaging_manager_server_count_validator

Required

true

Suppress Parameter Validation: Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_streams_messaging_manager_service_env_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server Count Validator

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_streams_messaging_manager_ui_count_validator

Required

true

Suppress Health Test: Streams Messaging Manager Rest Admin Server Health

Description

Whether to suppress the results of the Streams Messaging Manager Rest Admin Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_streams_messaging_manager_streams_messaging_manager_streams_messaging_manager_server_health

Required

true

Suppress Health Test: Streams Messaging Manager UI Server Health

Description

Whether to suppress the results of the Streams Messaging Manager UI Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_streams_messaging_manager_streams_messaging_manager_streams_messaging_manager_ui_health

Required

true

Streams Messaging Manager Rest Admin Server

Advanced

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh

Description

For advanced use only. A string to be inserted into env.sh for this role only.

Related Name**Default Value****API Name**

env.sh_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for Streams Messaging Manager Rest Admin Server, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value**API Name**

logback_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions

and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml

Description

For advanced use only. A string to be inserted into ranger-kafka-audit.xml for this role only.

Related Name

Default Value

API Name

ranger-kafka-audit.xml_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml

Description

Streams Messaging Manager Rest Admin Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Streams Messaging Manager Rest Admin Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Streams Messaging Manager Rest Admin Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Streams Messaging Manager Rest Admin Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`**Required**

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Cache Control Http Response Header Value

Description

Key-Value pairs where the key is URL pattern for the REST API Server to have the Cache-Control header applied to, and the value is the value of the Cache-Control header. Use the ':' character to separate keys and values.

Related Name

`cache.control.http.response.header.value`

Default Value

`/api/v1/admin/metrics/aggregated/*:private, max-age=60 /api/v1/admin/metrics/brokers/*:private, max-age=60 /api/v1/admin/metrics/consumers/*:private, max-age=60`

API Name

`cache.control.http.response.header.value`

Required

false

Cloudera Manager Emit Consumer Metrics Timeout

Description

SMM REST Server emits Consumer Metrics into Service Monitor. This config adjusts the timeout of the emission API call timeout.

Related Name

`cm.metrics.emit.consumer.metrics.timeout`

Default Value

10 second(s)

API Name

cm.metrics.emit.consumer.metrics.timeout

Required

false

Cloudera Manager Metrics TrustStore Type**Description**

Cloudera Manager's truststore type. If it is left empty then the keystore type will come from CM settings. If it is left empty then the keystore type will come from CM settings.

Related Name

cm.metrics.truststore.type

Default Value**API Name**

cm.metrics.truststore.type

Required

false

consumer.group.refresh.interval.ms**Description**

Refresh interval for consumer group's consumption.

Related Name

consumer.group.refresh.interval.ms

Default Value

60000

API Name

consumer.group.refresh.interval.ms

Required

true

Cruise Control Client Connect timeout**Description**

The connect timeout that is used by the jersey client that connects to Cruise Control.

Related Name

cruise.control.client.connect.timeout

Default Value

30000

API Name

cruise.control.client.connect.timeout

Required

false

Cruise Control Client Read timeout**Description**

The read timeout that is used by the jersey client that connects to Cruise Control.

Related Name

cruise.control.client.read.timeout

Default Value

30000

API Name

cruise.control.client.read.timeout

Required

false

Streams Messaging Manager Rest Admin Server Diagnostics Collection Timeout**Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name**Default Value**

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Emit Consumer Metrics**Description**

In case Cloudera Manager is configured for SMM as an underlying metricsStore, should SMM push the historic ConsumerGroup (lag and committed offset) metrics into CM.

Related Name

emit.consumer.metrics

Default Value

true

API Name

emit.consumer.metrics

Required

false

Enable Request Log**Description**

Enable logging of REST API requests.

Related Name

enable.request.log

Default Value

true

API Name

enable.request.log

Required

true

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name**Default Value**

30 second(s)

API Name

graceful_stop_timeout

Required

false

Inactive Group Timeout

Description

Timeout in ms for inactive group.

Related Name

inactive.group.timeout.ms

Default Value

1800000

API Name

inactive.group.timeout.ms

Required

true

inactive.producer.timeout.ms

Description

Timeout in ms for Inactive producer.

Related Name

inactive.producer.timeout.ms

Default Value

1800000

API Name

inactive.producer.timeout.ms

Required

true

Percentage Of Cores Used For Querying By Metrics Index Cache

Description

The percentage of cores allocated to the querying of the most frequently queried metrics.

Related Name

index.querying.threads.percentage

Default Value

75 %

API Name

index.querying.threads.percentage

Required

false

Kafka Connect Client Connect timeout

Description

The connect timeout that is used by the jersey client that connects to Kafka Connect.

Related Name

kafka.connect.client.connect.timeout

Default Value

30000

API Name

kafka.connect.client.connect.timeout

Required

false

Kafka Connect Client Read timeout

Description

The read timeout that is used by the jersey client that connects to Kafka Connect.

Related Name

kafka.connect.client.read.timeout

Default Value

30000

API Name

kafka.connect.client.read.timeout

Required

false

Kafka Connect Rest HostPorts

Description

Manual configuration of Kafka Connect rest URLs to enable Kafka Connect management in SMM. An URL list (in the format of host:port) is expected.

Related Name

kafka.connect.hostports

Default Value

API Name

kafka.connect.hostports

Required

false

Kafka Connect Plugin Sample Configuration Path

Description

Path to the directory containing Kafka Connector Plugins' sample json config files

Related Name

kafka.connect.plugin.sample.configs.path

Default Value

/etc/kafka_connect_ext/sample-configs

API Name

kafka.connect.plugin.sample.configs.path

Required

false

Kafka Connect Protocol

Description

Manual configuration of Kafka Connect rest protocol. Used only if Kafka Connect Host is not empty, otherwise Kafka Service dependency's Kafka Connect role's rest configuration will be set automatically.

Related Name

kafka.connect.protocol

Default Value

http

API Name

kafka.connect.protocol

Required

false

Kafka Logdir Cache Expiration ms

Description

Expiration interval for Kafka logdir related information.

Related Name

kafka.logdir.cache.expiration.ms

Default Value

55 second(s)

API Name

kafka.logdir.cache.expiration.ms

Required

true

Kafka Logdir Cache Maximum Size

Description

Maximum cache size for Kafka logdir related information.

Related Name

kafka.logdir.cache.maximum.size

Default Value

1000

API Name

kafka.logdir.cache.maximum.size

Required

true

Kafka Logdir Call Timeout ms

Description

Timeout value for Kafka AdminClient calls used for fetching Log Directory related data.

Related Name

kafka.logdir.call.timeout.ms

Default Value

10 second(s)

API Name

kafka.logdir.call.timeout.ms

Required

true

Enable Latency Metrics Processing

Description

To enable Latency Metrics Processing and Servicing, SMM will launch a service which continuously processes metrics received from producers and consumers and be able to provide responses to queries.

Related Name

latencyMetricsConfig.enable.latency.metrics.processing

Default Value

true

API Name

latencyMetricsConfig.enable.latency.metrics.processing

Required

true

LatencyMetricsConfig Metrics 15m Ttl Secs

Description

Determines the default TTL (Time To Live) for 15m granularity metrics (metrics are queryable in 15m).

Related Name

latencyMetricsConfig.metrics.15m.ttl.secs

Default Value

1209600

API Name

latencyMetricsConfig.metrics.15m.ttl.secs

Required

false

LatencyMetricsConfig Metrics Clean Frequency ms

Description

Frequency with which the metrics are cleaned from the above store in ms.

Related Name

latencyMetricsConfig.metrics.clean.frequency.ms

Default Value

21600000

API Name

latencyMetricsConfig.metrics.clean.frequency.ms

Required

false

Latency Metrics Data Storage Path

Description

Path to store latency metrics data.

Related Name

latencyMetricsConfig.metrics.storage

Default Value

/var/lib/streams_messaging_manager/latencymetrics/data

API Name

latencyMetricsConfig.metrics.storage

Required

false

Logger org.apache.kafka Logging Level

Description

Logger org.apache.kafka logging level.

Related Name

logging.org.apache.kafka.level

Default Value

INFO

API Name

logging.org.apache.kafka.level

Required

false

Logger smm.kafka.webservice.common Logging Level

Description

Logger smm.kafka.webservice.common logging level.

Related Name

logging.smm.kafka.webservice.common.level

Default Value

DEBUG

API Name

logging.smm.kafka.webservice.common.level

Required

false

Metrics Cache Refresh Interval ms

Description

Refresh interval for data collection from CM Metrics's Collector cache.

Related Name

metrics.cache.refresh.interval.ms

Default Value

50000

API Name

metrics.cache.refresh.interval.ms

Required

true

Metrics Fetcher Class

Description

SMM's kafka metrics fetcher class.

Related Name

metrics.fetcher.class

Default Value

com.hortonworks.smm.kafka.services.metric.cm.CMMetricsFetcher

API Name

metrics.fetcher.class

Required

true

Number of Metrics Fetcher Threads

Description

Number of metrics fetcher threads.

Related Name

metrics.fetcher.threads

Default Value

25

API Name

metrics.fetcher.threads

Required

true

Percentage Of Cores Used For Querying By Metrics Cache

Description

The percentage of cores allocated to the querying of the less frequently queried metrics.

Related Name

metrics.querying.threads.percentage

Default Value

25 %

API Name

metrics.querying.threads.percentage

Required

false

NiFi Stateless Extensions Directory

Description

Specifies the directory that stores the NiFi Stateless Connector extensions that will be downloaded.

Related Name

nifi.stateless.extensions.directory

Default Value

/tmp/nifi-stateless-extensions

API Name

nifi.stateless.extensions.directory

Required

false

NiFi Stateless Flow Definitions Directory

Description

Specifies where the NiFi Stateless flow definitions are stored.

Related Name

nifi.stateless.flow.definitions.directory

Default Value

/etc/kafka_connect_ext/flow-definitions

API Name

nifi.stateless.flow.definitions.directory

Required

false

NiFi Stateless krb5 File

Description

Specifies the krb5.conf file NiFi Stateless Connectors will use when connecting to Kerberos-enabled services.

Related Name

nifi.stateless.krb5.file

Default Value

/etc/krb5.conf

API Name

nifi.stateless.krb5.file

Required

false

NiFi Stateless Nexus URL

Description

Specifies the Base URL of the Nexus instance to source NiFi stateless extensions from.

Related Name

nifi.stateless.nexus.url

Default Value

https://repository.cloudera.com/artifactory/repo

API Name

nifi.stateless.nexus.url

Required

false

NiFi Stateless Working Directory

Description

Specifies the temporary working directory for expanding NiFi Stateless Connector Archives (NARs).

Related Name

nifi.stateless.working.directory

Default Value

/tmp/nifi-stateless-working

API Name

nifi.stateless.working.directory

Required

false

Prometheus Password

Description

Prometheus password, required when Prometheus is used as metrics store backend with TLS and basic auth.

Related Name

prometheus.metrics.password

Default Value

API Name

prometheus.metrics.password

Required

false

Prometheus Metrics URL

Description

Url of the Prometheus server, required when Prometheus is used as metrics store backend.

Related Name

prometheus.metrics.url

Default Value

API Name

prometheus.metrics.url

Required

false

Prometheus User

Description

Prometheus user, required when Prometheus is used as metrics store backend with TLS and basic auth.

Related Name

prometheus.metrics.user

Default Value**API Name**

prometheus.metrics.user

Required

false

Prometheus Query Threads**Description**

Determines how many parallel requests SMM should send to Prometheus to fetch metrics. Value should be the same as the "query.max-concurrency" config in Prometheus.

Related Name

prometheus.query.threads

Default Value

20

API Name

prometheus.query.threads

Required

false

Request Metrics Separately From Cloudera Manager**Description**

When checked, SMM is fetching each metrics one by one from Cloudera Manager Timeseries API. By default it is grouping metrics by their attributes so API is called less times.

Related Name

request.metrics.separately

Default Value

true

API Name

request.metrics.separately

Required

false

Java Heap Size of SMM**Description**

Maximum size for the SMM Java process heap memory. Passed to Java -Xmx. Measured in megabytes.

Related Name

SMM_HEAP_SIZE

Default Value

6 GiB

API Name

SMM_HEAP_SIZE

Required

false

SMM_JMX_OPTS

Description

Change parameters to setup jmxremote.

Related Name

SMM_JMX_OPTS

Default Value

-Dcom.sun.management.jmxremote -Dcom.sun.management.jmxremote.authenticate=false -
Dcom.sun.management.jmxremote.ssl=false

API Name

SMM_JMX_OPTS

Required

false

SMM_JVM_PERF_OPTS

Description

SMM JVM perf and gc opts.

Related Name

SMM_JVM_PERF_OPTS

Default Value

-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -
XX:+ExplicitGCInvokesConcurrent -Djava.awt.headless=true

API Name

SMM_JVM_PERF_OPTS

Required

false

AlertTopicConsumerConfig Poll Timeout ms

Description

Alert topic Consumer config poll timeout in ms.

Related Name

streams.messaging.manager.alertTopicConsumerConfig.poll.timeout.ms

Default Value

1 second(s)

API Name

streams.messaging.manager.alertTopicConsumerConfig.poll.timeout.ms

Required

false

Allow All Alert Notifications

Description

Whether to send the alert notifications periodically.

Related Name

streams.messaging.manager.allow.all.alert.notifications

Default Value

true

API Name

streams.messaging.manager.allow.all.alert.notifications

Required

false

Allowed resources

Description

Allowed resources for Streams Messaging Manager.

Related Name

streams.messaging.manager.allowed.resources

Default Value

401.html, back-default.png, favicon.ico

API Name

streams.messaging.manager.allowed.resources

Required

false

Authorization Cache Concurrency Level

Description

The number of threads that can update the authorization cache in parallel.

Related Name

streams.messaging.manager.auth.cache.concurrency.level

Default Value

4

API Name

streams.messaging.manager.auth.cache.concurrency.level

Required

false

Authorization Cache Expiration Time

Description

The expiration time for entries in the authorization cache.

Related Name

streams.messaging.manager.auth.cache.expiration.ms

Default Value

30 second(s)

API Name

streams.messaging.manager.auth.cache.expiration.ms

Required

false

Authorization Cache Maximum Number Of Cached Items

Description

Authorization cache maximum number of cached items. Setting it to zero disables the cache.

Related Name

streams.messaging.manager.auth.cache.maximum.size

Default Value

10000

API Name

streams.messaging.manager.auth.cache.maximum.size

Required

false

Enable TLS with Oracle DB

Description

Enable TLS with Oracle as DB for Schema Registry.

Related Name

streams.messaging.manager.enable.TLS.Oracle

Default Value

false

API Name

streams.messaging.manager.enable.TLS.Oracle

Required

false

Streams Messaging Manager Executor Thread Count

Description

Alerts config executor thread count.

Related Name

streams.messaging.manager.executor.thread.count

Default Value

30

API Name

streams.messaging.manager.executor.thread.count

Required

true

Streams Messaging Manager Executor Thread Pool Size

Description

NotifierProviders executor thread pool size.

Related Name

streams.messaging.manager.executor.thread.pool.size

Default Value

16

API Name

streams.messaging.manager.executor.thread.pool.size

Required

true

Replication Factor for Internal Topics

Description

Replication factor for all internal topics. They are by default starting with __smm. This includes KStreams related topics, alert notification topic and consumer/producer metrics related topics too. This setting affects only newly created topics. Already created ones will not be changed.

Related Name

streams.messaging.manager.internal.topics.replication.factor

Default Value

3

API Name

streams.messaging.manager.internal.topics.replication.factor

Required

false

Oracle TLS javax.net.ssl.keyStore

Description

Path to keystore file if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.keyStore

Default Value**API Name**

streams.messaging.manager.javax.net.ssl.keyStore

Required

false

Oracle TLS javax.net.ssl.keyStorePassword

Description

KeyStorePassword if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.keyStorePassword

Default Value**API Name**

streams.messaging.manager.javax.net.ssl.keyStorePassword

Required

false

Oracle TLS javax.net.ssl.keyStoreType

Description

keyStoreType type if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.keyStoreType

Default Value**API Name**

streams.messaging.manager.javax.net.ssl.keyStoreType

Required

false

Oracle TLS `javax.net.ssl.trustStore`

Description

Required Path to truststore file if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.trustStore

Default Value

API Name

streams.messaging.manager.javax.net.ssl.trustStore

Required

false

Oracle TLS `javax.net.ssl.trustStorePassword`

Description

TrustStorePassword type if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.trustStorePassword

Default Value

API Name

streams.messaging.manager.javax.net.ssl.trustStorePassword

Required

false

Oracle TLS `javax.net.ssl.trustStoreType`

Description

Required Truststore type if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.trustStoreType

Default Value

API Name

streams.messaging.manager.javax.net.ssl.trustStoreType

Required

false

Java Home Path Override

Description

Java Home Path Override for Streams Messaging Manager

Related Name

streams.messaging.manager.jdk.home

Default Value

API Name

streams.messaging.manager.jdk.home

Required

false

Kafka Alert Notification Topic

Description

Kafka alert notification topic name.

Related Name

streams.messaging.manager.kafka.alert.notifications.topic

Default Value

__smm_alert_notifications

API Name

streams.messaging.manager.kafka.alert.notifications.topic

Required

true

Kafka Cache Refresh Interval ms

Description

Cache refresh interval in ms for Kafka AdminClient calls used for fetching metadata for topics and brokers.

Related Name

streams.messaging.manager.kafka.cache.refresh.interval.ms

Default Value

15000

API Name

streams.messaging.manager.kafka.cache.refresh.interval.ms

Required

false

Streams Messaging Manager KafkaConsumerClient Poll Timeout ms

Description

SMM's Kafka Consumer Client poll timeout in ms.

Related Name

streams.messaging.manager.kafkaConsumerClient.poll.timeout.ms

Default Value

1 second(s)

API Name

streams.messaging.manager.kafkaConsumerClient.poll.timeout.ms

Required

false

Kerberos Name Rules

Description

Kerberos name rules for Streams Messaging Manager. If left empty, the cluster wide rules will be applied.

Related Name

streams.messaging.manager.kerberos.name.rules

Default Value

API Name

streams.messaging.manager.kerberos.name.rules

Required

false

Kerberos Non Browser User Agents

Description

Non browser user agents if kerberos is enabled.

Related Name

streams.messaging.manager.kerberos.non.browser.user.agents

Default Value

API Name

streams.messaging.manager.kerberos.non.browser.user.agents

Required

false

Oracle TLS oracle.net.authentication_services

Description

oracle net authentication service if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.oracle.net.authentication_services

Default Value

API Name

streams.messaging.manager.oracle.net.authentication_services

Required

false

Oracle TLS oracle.net.ssl_cipher_suites

Description

net ssl cipher suites if enabling TLS using Oracle DB e.g. SSL_DH_DSS_WITH_DES_CBC_SHA.

Related Name

streams.messaging.manager.oracle.net.ssl_cipher_suites

Default Value

API Name

streams.messaging.manager.oracle.net.ssl_cipher_suites

Required

false

Oracle TLS oracle.net.ssl_server_dn_match

Description

ssl server domain name match if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.oracle.net.ssl_server_dn_match

Default Value

true

API Name

streams.messaging.manager.oracle.net.ssl_server_dn_match

Required

false

oracle.net.ssl_version

Description

oracle net ssl version.

Related Name

streams.messaging.manager.oracle.net.ssl_version

Default Value

API Name

streams.messaging.manager.oracle.net.ssl_version

Required

false

Streams Messaging Manager NotifierProviders Config Classes

Description

NotifierProviders config classes in list format.

Related Name

streams.messaging.manager.providerClasses

Default Value

[com.hortonworks.smm.notifier.http.HttpNotifierProvider,
com.hortonworks.smm.notifier.email.EmailNotifierProvider]

API Name

streams.messaging.manager.providerClasses

Required

true

Save Notification Read Status Per User

Description

Alert notification save status flag per user.

Related Name

streams.messaging.manager.save.notification.read.status.per.user

Default Value

true

API Name

streams.messaging.manager.save.notification.read.status.per.user

Required

false

Servlet filter

Description

Streams Messaging Manager servlet filter class.

Related Name

streams.messaging.manager.servlet.filter

Default Value

com.hortonworks.registries.auth.server.AuthenticationFilter

API Name

streams.messaging.manager.servlet.filter

Required

true

Excluded SSL/TLS Cipher Suites

Description

A list of cipher suites which are excluded. If left empty, falls back to the server default.

Related Name

streams.messaging.manager.ssl.excludedCipherSuites

Default Value**API Name**

streams.messaging.manager.ssl.excludedCipherSuites

Required

false

Excluded SSL/TLS Protocols

Description

A list of protocols which are excluded. If left empty, falls back to the server default.

Related Name

streams.messaging.manager.ssl.excludedProtocols

Default Value**API Name**

streams.messaging.manager.ssl.excludedProtocols

Required

false

SSL Keystore Type

Description

The keystore type. Required if Streams Messaging Manager rest server's SSL is enabled. e.g. PKCS12 or JKS. If it is left empty then the keystore type will come from CM settings.

Related Name

streams.messaging.manager.ssl.keyStoreType

Default Value**API Name**

streams.messaging.manager.ssl.keyStoreType

Required

false

Supported SSL/TLS Cipher Suites

Description

A list of cipher suites which are supported. If left empty, falls back to the server default.

Related Name

streams.messaging.manager.ssl.supportedCipherSuites

Default Value**API Name**

streams.messaging.manager.ssl.supportedCipherSuites

Required

false

Supported SSL/TLS Protocols

Description

A list of protocols which are supported. If left empty, falls back to the server default.

Related Name

streams.messaging.manager.ssl.supportedProtocols

Default Value**API Name**

streams.messaging.manager.ssl.supportedProtocols

Required

false

SSL TrustStore Type

Description

The truststore type. Required if streams messaging manager's ssl is enabled. e.g. PKCS12 or JKS. If it is left empty then the keystore type will come from CM settings.

Related Name

streams.messaging.manager.ssl.trustStoreType

Default Value**API Name**

streams.messaging.manager.ssl.trustStoreType

Required

false

SSL ValidateCerts

Description

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates. Note: if this is enabled, the certificate revocation method (CRLDP/OCSP) is also needed. This can be done by overriding Dropwizard configuration with Java system properties. E.g: `-Ddw.server.applicationConnectors[0].enableCRLDP=true` (more details at <https://www.dropwizard.io/en/latest/manual/core.html>)

Related Name

streams.messaging.manager.ssl.validateCerts

Default Value

false

API Name

streams.messaging.manager.ssl.validateCerts

Required

false

SSL validatePeers

Description

Whether or not to validate TLS peer certificates.

Related Name

streams.messaging.manager.ssl.validatePeers

Default Value

false

API Name

streams.messaging.manager.ssl.validatePeers

Required

false

Streams Messaging Manager Query Timeout

Description

Streams Messaging Manager query timeout.

Related Name

streams.messaging.manager.storage.query.timeout

Default Value

30 millisecond(s)

API Name

streams.messaging.manager.storage.query.timeout

Required

true

Token validity

Description

Kerberos token validity for Streams Messaging Manager in ms.

Related Name

streams.messaging.manager.token.validity

Default Value

36000

API Name

streams.messaging.manager.token.validity

Required

false

Streams Messaging Manager Configuration Directory

Description

Directory to Streams messaging manager additional libs, jars, isos, etc.

Related Name

streams.messaging.manager.working.directory

Default Value

/var/lib/streams_messaging_manager

API Name

streams.messaging.manager.working.directory

Required

false

Streams Replication Manager Basic Authentication**Description**

Enable Basic Authentication when connecting to SRM Service for replication monitoring. Used when "Configure Streams Replication Manager Manually" is true.

Related Name

streams.replication.manager.manual.basic.auth.enabled

Default Value

false

API Name

streams.replication.manager.manual.basic.auth.enabled

Required

false

Streams Replication Manager Basic Authentication Password**Description**

The password to use when Basic Authentication is enabled when connecting to SRM Service for replication monitoring. Used when "Configure Streams Replication Manager Manually" is true.

Related Name

streams.replication.manager.manual.basic.auth.password

Default Value**API Name**

streams.replication.manager.manual.basic.auth.password

Required

false

Streams Replication Manager Basic Authentication Username**Description**

The username to use when Basic Authentication is enabled when connecting to SRM Service for replication monitoring. Used when "Configure Streams Replication Manager Manually" is true.

Related Name

streams.replication.manager.manual.basic.auth.username

Default Value**API Name**

streams.replication.manager.manual.basic.auth.username

Required

false

Configure Streams Replication Manager Manually**Description**

Configure Streams Replication Manager related configurations manually, which are used for replication monitoring. This overrides the service dependency based auto-configuration.

Related Name

streams.replication.manager.manual.configuration

Default Value

false

API Name

streams.replication.manager.manual.configuration

Required

false

Streams Replication Manager Rest HostPorts**Description**

The hosts and ports to be used when connecting to the SRM service for replication monitoring, in the following format: host:port. Used when "Configure Streams Replication Manager Manually" is true.

Related Name

streams.replication.manager.manual.hostports

Default Value**API Name**

streams.replication.manager.manual.hostports

Required

false

Streams Replication Manager Rest Protocol**Description**

The rest protocol to be used when connecting to the SRM service for replication monitoring. Used when "Configure Streams Replication Manager Manually" is true.

Related Name

streams.replication.manager.manual.protocol

Default Value

http

API Name

streams.replication.manager.manual.protocol

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page

cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

rm_memory_soft_limit_v2

Required

true

Security**Streams Messaging Manager Rest Admin Server TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Streams Messaging Manager Rest Admin Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

streams.messaging.manager.ssl.trustStorePath

Default Value**API Name**

ssl_client_truststore_location

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Trust Store Password**Description**

The password for the Streams Messaging Manager Rest Admin Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Streams Messaging Manager Rest Admin Server**Description**

Encrypt communication between clients and Streams Messaging Manager Rest Admin Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl.enable

Default Value

false

API Name

ssl_enabled

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Streams Messaging Manager Rest Admin Server is acting as a TLS/SSL server.

Related Name

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Streams Messaging Manager Rest Admin Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

streams.messaging.manager.ssl.keyStorePath

Default Value

API Name

ssl_server_keystore_location

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Password

Description

The password for the Streams Messaging Manager Rest Admin Server keystore file.

Related Name

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

`stacks_collection_frequency`**Default Value**

5.0 second(s)

API Name`stacks_collection_frequency`**Required**

false

Stacks Collection Method**Description**

The method used to collect stacks. The `jstack` option involves periodically running the `jstack` command against the role's daemon process. The `servlet` method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the `servlet` method is selected, that HTTP endpoint is periodically scraped.

Related Name`stacks_collection_method`**Default Value**`jstack`**API Name**`stacks_collection_method`**Required**

false

Suppressions**Suppress Parameter Validation: Cache Control Http Response Header Value****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cache Control Http Response Header Value parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_cache.control.http.response.header.value`**Required**

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

`role_config_suppression_cdh_version_validator`**Required**`true`**Suppress Parameter Validation: Cloudera Manager Metrics TrustStore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Metrics TrustStore Type parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_cm.metrics.truststore.type`**Required**`true`**Suppress Parameter Validation: consumer.group.refresh.interval.ms****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the consumer.group.refresh.interval.ms parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_consumer.group.refresh.interval.ms`**Required**`true`**Suppress Parameter Validation: Cruise Control Client Connect timeout****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cruise Control Client Connect timeout parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_cruise.control.client.connect.timeout`**Required**`true`**Suppress Parameter Validation: Cruise Control Client Read timeout****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cruise Control Client Read timeout parameter.

Related Name

Default Value

false

API Name

role_config_suppression_cruise.control.client.read.timeout

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh parameter.

Related Name

Default Value

false

API Name

role_config_suppression_env.sh_role_safety_valve

Required

true

Suppress Parameter Validation: Inactive Group Timeout

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Inactive Group Timeout parameter.

Related Name

Default Value

false

API Name

role_config_suppression_inactive.group.timeout.ms

Required

true

Suppress Parameter Validation: inactive.producer.timeout.ms

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the inactive.producer.timeout.ms parameter.

Related Name

Default Value

false

API Name

role_config_suppression_inactive.producer.timeout.ms

Required

true

Suppress Parameter Validation: Percentage Of Cores Used For Querying By Metrics Index Cache

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Percentage Of Cores Used For Querying By Metrics Index Cache parameter.

Related Name

Default Value

false

API Name

role_config_suppression_index.querying.threads.percentage

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: Kafka Connect Client Connect timeout

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Client Connect timeout parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.client.connect.timeout

Required

true

Suppress Parameter Validation: Kafka Connect Client Read timeout

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Client Read timeout parameter.

Related Name

Default Value

false

API Name

`role_config_suppression_kafka.connect.client.read.timeout`**Required**

true

Suppress Parameter Validation: Kafka Connect Rest HostPorts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Rest HostPorts parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_kafka.connect.hostports`**Required**

true

Suppress Parameter Validation: Kafka Connect Plugin Sample Configuration Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Plugin Sample Configuration Path parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_kafka.connect.plugin.sample.configs.path`**Required**

true

Suppress Parameter Validation: LatencyMetricsConfig Metrics 15m Ttl Secs**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LatencyMetricsConfig Metrics 15m Ttl Secs parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_latencymetricsconfig.metrics.15m.ttl.secs`**Required**

true

Suppress Parameter Validation: LatencyMetricsConfig Metrics Clean Frequency ms**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LatencyMetricsConfig Metrics Clean Frequency ms parameter.

Related Name

Default Value

false

API Name

role_config_suppression_latencymetricsconfig.metrics.clean.frequency.ms

Required

true

Suppress Parameter Validation: Latency Metrics Data Storage Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Latency Metrics Data Storage Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_latencymetricsconfig.metrics.storage

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server XML Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server XML Override parameter.

Related Name

Default Value

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Parameter Validation: Metrics Cache Refresh Interval ms

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Cache Refresh Interval ms parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.cache.refresh.interval.ms

Required

true

Suppress Parameter Validation: Metrics Fetcher Class**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Fetcher Class parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.fetcher.class

Required

true

Suppress Parameter Validation: Number of Metrics Fetcher Threads**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Metrics Fetcher Threads parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.fetcher.threads

Required

true

Suppress Parameter Validation: Percentage Of Cores Used For Querying By Metrics Cache**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Percentage Of Cores Used For Querying By Metrics Cache parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.querying.threads.percentage

Required

true

Suppress Parameter Validation: NiFi Stateless Extensions Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NiFi Stateless Extensions Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_nifi.stateless.extensions.directory

Required

true

Suppress Parameter Validation: NiFi Stateless Flow Definitions Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NiFi Stateless Flow Definitions Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_nifi.stateless.flow.definitions.directory

Required

true

Suppress Parameter Validation: NiFi Stateless krb5 File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NiFi Stateless krb5 File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_nifi.stateless.krb5.file

Required

true

Suppress Parameter Validation: NiFi Stateless Nexus URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NiFi Stateless Nexus URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_nifi.stateless.nexus.url

Required

true

Suppress Parameter Validation: NiFi Stateless Working Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NiFi Stateless Working Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_nifi.stateless.working.directory

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Parameter Validation: Prometheus Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_prometheus.metrics.password

Required

true

Suppress Parameter Validation: Prometheus Metrics URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus Metrics URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_prometheus.metrics.url

Required

true

Suppress Parameter Validation: Prometheus User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus User parameter.

Related Name

Default Value

false

API Name

role_config_suppression_prometheus.metrics.user

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-audit.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-security.xml_role_safety_valve

Suppress Parameter Validation: Java Home Path Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.jdk.home

Required

true

Suppress Parameter Validation: Kafka Alert Notification Topic

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Alert Notification Topic parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kafka.alert.notifications.topic

Required

true

Suppress Parameter Validation: Kafka Cache Refresh Interval ms

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Cache Refresh Interval ms parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kafka.cache.refresh.interval.ms

Required

true

Suppress Parameter Validation: Kerberos Name Rules**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Name Rules parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.name.rules

Required

true

Suppress Parameter Validation: Kerberos Non Browser User Agents**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Non Browser User Agents parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.non.browser.user.agents

Required

true

Suppress Parameter Validation: Oracle TLS oracle.net.authentication_services**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS oracle.net.authentication_services parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.authentication_services

Required

true

Suppress Parameter Validation: Oracle TLS oracle.net.ssl_cipher_suites

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS oracle.net.ssl_cipher_suites parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.ssl_cipher_suites

Required

true

Suppress Parameter Validation: oracle.net.ssl_version

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the oracle.net.ssl_version parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.ssl_version

Required

true

Suppress Parameter Validation: Streams Messaging Manager NotifierProviders Config Classes

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager NotifierProviders Config Classes parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.providerclasses

Required

true

Suppress Parameter Validation: Save Notification Read Status Per User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Save Notification Read Status Per User parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_streams.messaging.manager.save.notification.read.status.per.user`**Required**

true

Suppress Parameter Validation: Servlet filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Servlet filter parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_streams.messaging.manager.servlet.filter`**Required**

true

Suppress Parameter Validation: Excluded SSL/TLS Cipher Suites**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Excluded SSL/TLS Cipher Suites parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_streams.messaging.manager.ssl.excludedciphersuites`**Required**

true

Suppress Parameter Validation: Excluded SSL/TLS Protocols**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Excluded SSL/TLS Protocols parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_streams.messaging.manager.ssl.excludedprotocols`**Required**

true

Suppress Parameter Validation: SSL Keystore Type**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.keystoretype

Required

true

Suppress Parameter Validation: Supported SSL/TLS Cipher Suites

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Supported SSL/TLS Cipher Suites parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.supportedciphersuites

Required

true

Suppress Parameter Validation: Supported SSL/TLS Protocols

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Supported SSL/TLS Protocols parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.supportedprotocols

Required

true

Suppress Parameter Validation: SSL TrustStore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.truststoretype

Required

true

Suppress Parameter Validation: SSL ValidateCerts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatecerts

Required

true

Suppress Parameter Validation: SSL validatePeers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL validatePeers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatepeers

Required

true

Suppress Parameter Validation: Streams Messaging Manager Configuration Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Configuration Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.working.directory

Required

true

Suppress Parameter Validation: Streams Replication Manager Basic Authentication Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Basic Authentication Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.manual.basic.auth.password

Required

true

Suppress Parameter Validation: Streams Replication Manager Basic Authentication Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Basic Authentication Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.manual.basic.auth.username

Required

true

Suppress Parameter Validation: Streams Replication Manager Rest HostPorts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Rest HostPorts parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.manual.hostports

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams_messaging_manager_server_role_env_safety_valve

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

```
role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_log_d  
irectory_free_space
```

Required

```
true
```

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

```
false
```

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_rang  
e_r_plugin_hdfs_spool_directory_size_health
```

Required

```
true
```

Suppress Health Test: Ranger Plugin Solr Spool Directory Size**Description**

Whether to suppress the results of the Ranger Plugin Solr Spool Directory Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

```
false
```

API Name

```
role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_rang  
e_r_plugin_solr_spool_directory_size_health
```

Required

```
true
```

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

Streams Messaging Manager UI Server

Advanced

Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json

Description

For advanced use only. A string to be inserted into config.json for this role only.

Related Name

Default Value

API Name

config.json_role_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

true

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

STREAMS_MESSAGING_MANAGER_UI_role_env_safety_valve

Required

false

Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for vars-ui.sh

Description

For advanced use only. A string to be inserted into vars-ui.sh for this role only.

Related Name

Default Value

API Name

vars-ui.sh_role_safety_valve

Required

false

Logs

Streams Messaging Manager UI Server Log Directory

Description

The log directory for log files of the role Streams Messaging Manager UI Server.

Related Name

log_dir

Default Value

/var/log/streams-messaging-manager

API Name

log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

Log Directory Free Space Monitoring Absolute Thresholds

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
Related Name	
Default Value	Warning: 10 GiB, Critical: 5 GiB
API Name	log_directory_free_space_absolute_thresholds
Required	false

Log Directory Free Space Monitoring Percentage Thresholds

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.
Related Name	
Default Value	Warning: Never, Critical: Never
API Name	log_directory_free_space_percentage_thresholds
Required	false

Metric Filter

Description	
--------------------	--

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

Required

false

OpenTelemetry Collector Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_password)` expression. Specify `$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL**Description**

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_url)` expression. Specify `$INFRA(cdp_request_signer_url)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**`$INFRA(cdp_request_signer_url)`**API Name**

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username**Description**

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_user)` expression. Specify `$INFRA(cdp_request_signer_username)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**`$INFRA(cdp_request_signer_username)`**API Name**

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

streams_messaging_manager_ui_fd_thresholds

Required

false

Streams Messaging Manager UI Server Host Health Test

Description

When computing the overall Streams Messaging Manager UI Server health, consider the host's health.

Related Name

Default Value

	true
API Name	streams_messaging_manager_ui_host_health_enabled
Required	false

Streams Messaging Manager UI Server Process Health Test

Description
Enables the health test that the Streams Messaging Manager UI Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

streams_messaging_manager_ui_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description
The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description
The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

Cgroup V2 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

API Name

`rm_memory_soft_limit_v2`**Required**`true`**Security****Streams Messaging Manager UI Server TLS/SSL Certificate Trust Store File****Description**

The location on disk of the trust store, in .pem format, used to confirm the authenticity of TLS/SSL servers that Streams Messaging Manager UI Server might connect to. This is used when Streams Messaging Manager UI Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`streams.messaging.manager.ui.ssl.trust.store.location`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Enable TLS/SSL for Streams Messaging Manager UI Server****Description**

Encrypt communication between clients and Streams Messaging Manager UI Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name`streams.messaging.manager.ui.ssl.enable`**Default Value**`false`**API Name**`ssl_enabled`**Required**`false`**Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format)****Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name`streams.messaging.manager.ui.ssl.ca.cert.location`**Default Value****API Name**`ssl_server_ca_certificate_location`**Required**

false

Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format)

Description

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

streams.messaging.manager.ui.ssl.cert.location

Default Value

API Name

ssl_server_certificate_location

Required

false

Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format)

Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

streams.messaging.manager.ui.ssl.private.key.location

Default Value

API Name

ssl_server_privatekey_location

Required

false

Streams Messaging Manager UI Server TLS/SSL Private Key Password

Description

The password for the private key in the Streams Messaging Manager UI Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

Default Value

API Name

ssl_server_privatekey_password

Required

false

SSL/TLS Cipher Suite

Description

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018,

according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

Related Name

API Name

client_config_priority

Required

true

Control Topics Creation Timeout**Description**

The timeout to use when creating the internal control topics.

Related Name

control.topic.creation.timeout.ms

Default Value

20 second(s)

API Name

control.topic.creation.timeout.ms

Required

false

SRM Client's Kerberos Keytab Location**Description**

The path of the kerberos keytab file to be used by the SRM Client to authenticate with the co-located Kafka cluster. If left empty, the JAAS configuration of the co-located Kafka connection will not be generated.

Related Name

kerberos.keytab.location

Default Value**API Name**

kerberos.keytab.location

Required

false

SRM Client's Kerberos Principal Name**Description**

The kerberos principal name of the SRM Client to authenticate with the co-located Kafka cluster. If left empty, the JAAS configuration of the co-located Kafka connection will not be generated.

Related Name

kerberos.principal.name

Default Value**API Name**

kerberos.principal.name

Required

false

SRM Client's Secure Storage Password

Description

Password for the secure storage that securely stores the sensitive client configurations. The default value is an empty string. If left empty, the SRM Client Secure Storage will not be created, and sensitive configuration will not be available for the client.

Related Name

securestorage.password

Default Value**API Name**

securestorage.password

Required

false

Environment Variable Holding SRM Client's Secure Storage Password

Description

Name of the environment variable that stores the password for the SRM Client's secure storage.

Related Name

config.providers.secure.param.keystore.password.value

Default Value

SECURESTOREPASS

API Name

securestorage.password.variable

Required

false

SRM Client's TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when a SRM Client is authenticated as an SSL client against a Kafka cluster. If left empty, this configuration is not saved into the respective secure client configuration, preventing the use of the client keystore.

Related Name

ssl.keystore.keypassword

Default Value**API Name**

ssl.keystore.keypassword

Required

false

Keystore file Location for the SRM client's TLS/SSL server

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. This path is used when an SRM Client authenticates as an SSL client against a Kafka cluster.

Related Name

ssl.keystore.location

Default Value**API Name**

ssl.keystore.location

Required

false

SRM Client's TLS/SSL Server Keystore File Password**Description**

The password for the SRM Client keystore file. If left empty, this config will not be saved into the respective secure client configuration, preventing the use of the Client Keystore.

Related Name

ssl.keystore.password

Default Value**API Name**

ssl.keystore.password

Required

false

Security**Gateway TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Gateway TLS/SSL Trust Store Password**Description**

The password for the Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "`

streamThreshold": 10, "enabled": "true"}}See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

Healthy SRM Driver Monitoring Thresholds

Description

The health test thresholds of the overall SRM Driver health. The check returns "Concerning" health if the percentage of "Healthy" SRM Drivers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" SRM Drivers falls below the critical threshold.

Related Name

Default Value

Warning: 94.99 %, Critical: 49.99 %

API Name

STREAMS_REPLICATION_MANAGER_STREAMS_REPLICATION_MANAGER_DRIVER_healthy_thresholds

Required

false

Healthy SRM Service Monitoring Thresholds

Description

The health test thresholds of the overall SRM Service health. The check returns "Concerning" health if the percentage of "Healthy" SRM Services falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" SRM Services falls below the critical threshold.

Related Name

Default Value

Warning: 94.99 %, Critical: 49.99 %

API Name

STREAMS_REPLICATION_MANAGER_STREAMS_REPLICATION_MANAGER_SERVICE_healthy_thresholds

Required

false

Other**Streams Replication Manager Cluster alias****Description**

Specifies cluster aliases for the clusters SRM is connecting to. Cluster aliases are comma delimited. For example, 'primary, backup'.

Related Name

clusters

Default Value**API Name**

clusters

Required

true

Streams Replication Manager Co-located Kafka Cluster Alias**Description**

Alias for co-located kafka cluster. Set this only if Kafka is available on the cluster where SRM lives, and replication is needed for that Kafka cluster. For this property to have any effect, the dependency on the co-located Kafka should be activated.

Related Name

colocated.cluster.alias

Default Value**API Name**

colocated.cluster.alias

Required

false

SRM Control Topics Replication Factor**Description**

The replication factor of the topics used and created by the srm-control tool. This configuration is applied when a replication is started for the first time.

Related Name

control.topic.replication.factor

Default Value

3

API Name

control.topic.replication.factor

Required

false

Emit Checkpoints Interval Seconds

Description

The interval at which SRM emits checkpoint information.

Related Name

emit.checkpoints.interval.seconds

Default Value

5 second(s)

API Name

emit.checkpoints.interval.seconds

Required

true

External Basic Authentication Accounts Accepted By SRM Service

Description

Specifies the list of external Basic Authentication accounts to be allowed by SRM Service. These external accounts can be added in Cloudera Manager under Administration -> External Accounts -> Basic Authentication Credentials -> Add Basic Authentication Credentials.

Related Name

external_basic_auth_accounts

Default Value**API Name**

external_basic_auth_accounts

Required

false

External Kafka Accounts

Description

Specifies the list of external Kafka accounts to be imported into the SRM configuration. These external accounts can be added in Cloudera Manager under Administration -> External Accounts -> Kafka Credentials -> Add Kafka Credentials.

Related Name

external_kafka_accounts

Default Value**API Name**

external_kafka_accounts

Required

false

External Accounts For Remote Querying SRM Services

Description

Specifies the list of external SRM Service accounts to be used for connecting to the corresponding remote SRM Services. These external accounts can be added in Cloudera Manager under Administration -> External Accounts -> Streams Replication Manager Credentials -> Add Streams Replication Manager Service Credentials.

Related Name

external_srm_service_accounts

Default Value

API Name

external_srm_service_accounts

Required

false

Kafka Service

Description

Name of the Kafka service that this Streams Replication Manager service instance depends on

Related Name

Default Value

API Name

kafka_service

Required

false

Enable Kerberos Authentication

Description

Enables Kerberos authentication for this Streams Replication Manager.

Related Name

kerberos.auth.enable

Default Value

false

API Name

kerberos.auth.enable

Required

false

Metrics Topics Partition Count

Description

The partition count of the metrics topics. The partition count affects how many SRM Services can work in the cluster in parallel. This configuration is applied when a replication is started for the first time. After the topic is created, SRM checks at startup whether the metrics topics have the expected partition count. If the partition count does not match the value set in this property, SRM fails to start.

Related Name

metrics.topic.partition.count

Default Value

16

API Name

metrics.topic.partition.count

Required

false

Metrics Topics Replication Factor

Description

The replication factor of the metrics topics. This configuration is applied when a replication is started for the first time.

Related Name

metrics.topic.replication.factor

Default Value

3

API Name

metrics.topic.replication.factor

Required

false

Verify Partition Count Of The Metrics Topic

Description

Enables the verification of the partition count of metrics. If enabled, it will compare the expected number of partitions and the actual number of partitions.

Related Name

metrics.topic.verify.partition.count

Default Value

true

API Name

metrics.topic.verify.partition.count

Required

false

Enable Prefixless Replication

Description

Enables prefixless replication for Streams Replication Manager (SRM). If selected, SRM uses the 'IdentityReplicationPolicy' instead of the 'DefaultReplicationPolicy'. Additionally, if this property is selected, the 'Use Internal Topic For Remote Topics Discovery' property is also automatically selected.

Related Name

prefixless.replication.enabled

Default Value

false

API Name

prefixless.replication.enabled

Required

false

Refresh Groups Interval Seconds

Description

The interval at which SRM looks for new consumer groups on source clusters.

Related Name

refresh.groups.interval.seconds

Default Value

10 minute(s)

API Name

refresh.groups.interval.seconds

Required

true

Refresh Topics Interval Seconds**Description**

The interval at which SRM looks for new topics on source clusters.

Related Name

refresh.topics.interval.seconds

Default Value

10 minute(s)

API Name

refresh.topics.interval.seconds

Required

true

Use Internal Topic For Remote Topics Discovery**Description**

Enables the discovery of remote (replicated) topics using an internal topic that stores all remote topics. This replaces the prefix-based remote topic detection used when the 'DefaultReplicationPolicy' replication policy is in use. This property must be selected if Streams Replication Manager (SRM) is configured to use a prefixless replication policy. This property is automatically selected if 'Enable Prefixless Replication' is selected.

Related Name

remote.topics.discovery.enabled

Default Value

true

API Name

remote.topics.discovery.enabled

Required

false

SRM_HEAP_OPTS**Description**

Memory heap params.

Related Name

SRM_HEAP_OPTS

Default Value

-Xmx8G -Xms1G

API Name

SRM_HEAP_OPTS**Required**

false

SRM_JMX_OPTS**Description**

Change parameters to setup jmxremote.

Related Name

SRM_JMX_OPTS

Default Value-Dcom.sun.management.jmxremote -Dcom.sun.management.jmxremote.authenticate=false -
Dcom.sun.management.jmxremote.ssl=false**API Name**

SRM_JMX_OPTS

Required

false

SRM_JVM_PERF_OPTS**Description**

SRM JVM perf and gc opts.

Related Name

SRM_JVM_PERF_OPTS

Default Value-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -
XX:+ExplicitGCInvokesConcurrent -Djava.awt.headless=true**API Name**

SRM_JVM_PERF_OPTS

Required

false

Streams Replication Manager's Replication Configs**Description**

Specifies cluster bootstrap server information and cluster replication pairs. Bootstrap information for each alias defined in the clusters property has to be added as follows: 'primary.bootstrap.servers=mycluster1.example.com:9092', 'backup.bootstrap.servers=mycluster2.example.com:9092'.. Each cluster configuration has to be added in a new line, if cluster has multiple nodes, add all nodes to the same line and delimit each with a comma. Cluster replication pairs can be defined as follows: 'primary->backup.enabled=true'.. Each unique replication pair has to be added in a new line.

Related Name

streams.replication.manager.config

Default Value**API Name**

streams.replication.manager.config

Required

false

SRM Log Format

Description

Format of the messages output by the logger in SRM Driver and SRM Service. For the logsearch functionality to work, the first 3 columns (date, level, context) must stay the same.

Related Name

streams.replication.manager.log.format

Default Value

%dISO8601 %p %c: [%t] %Xconnector.context%m%n%rEx

API Name

streams.replication.manager.log.format

Required

false

Retry Interval For SRM Rolling Restart Check

Description

Specifies the interval (in seconds) at which the SRM Driver/Service Rolling Restart Check tests the SRM instance's availability.

Related Name

streams.replication.manager.rolling.restart.check.retry.interval.sec

Default Value

5 second(s)

API Name

streams.replication.manager.rolling.restart.check.retry.interval.sec

Required

false

Maximum Allowed Runtime For SRM Rolling Restart Check

Description

Specifies the maximum amount of time (in seconds) that a SRM Driver/Service Rolling Restart Check can take.

Related Name

streams.replication.manager.rolling.restart.check.time.limit.sec

Default Value

2 minute(s)

API Name

streams.replication.manager.rolling.restart.check.time.limit.sec

Required

false

Sync Topic Acls Enabled

Description

Enables the monitoring of the source cluster for ACL changes.

Related Name

sync.topic.acls.enabled

Default Value

	false
API Name	sync.topic.acls.enabled
Required	true

Sync Topic Acls Interval Seconds

Description	The interval at which SRM checks the source cluster for ACL changes.
Related Name	sync.topic.acls.interval.seconds
Default Value	30 second(s)
API Name	sync.topic.acls.interval.seconds
Required	true

Sync Topic Configs Interval Seconds

Description	The interval at which SRM checks the source cluster for configuration changes.
Related Name	sync.topic.configs.interval.seconds
Default Value	10 minute(s)
API Name	sync.topic.configs.interval.seconds
Required	true

Tasks Max

Description	Maximum number of tasks for replication between clusters.
Related Name	tasks.max
Default Value	3
API Name	tasks.max
Required	true

Security

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

streamsrepmgr

API Name

kerberos_princ_name

Required

Suppress Configuration Validator: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the JMX Exporter configuration YAML configuration validator.

Related Name**Default Value**

false

API Name
role_config_suppression_jmx_exporter_yaml

Required
true

Suppress Configuration Validator: SRM Client's Kerberos Keytab Location

Description
Whether to suppress configuration warnings produced by the SRM Client's Kerberos Keytab Location configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_kerberos.keytab.location

Required
true

Suppress Configuration Validator: SRM Client's Kerberos Principal Name

Description
Whether to suppress configuration warnings produced by the SRM Client's Kerberos Principal Name configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_kerberos.principal.name

Required
true

Suppress Configuration Validator: SRM Driver Log Directory

Description
Whether to suppress configuration warnings produced by the SRM Driver Log Directory configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_log_dir

Required
true

Suppress Configuration Validator: SRM Driver XML Override

Description

Whether to suppress configuration warnings produced by the SRM Driver XML Override configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Configuration Validator: Metrics Reporter Password

Description

Whether to suppress configuration warnings produced by the Metrics Reporter Password configuration validator.

Related Name

Default Value

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_streams_replication_manager_service_env_safety_valve

Required

true

Suppress Health Test: SRM Driver Health

Description

Whether to suppress the results of the SRM Driver Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_streams_replication_manager_streams_replication_manager_driver_healthy

Required

true

Suppress Health Test: SRM Service Health

Description

Whether to suppress the results of the SRM Service Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_streams_replication_manager_streams_replication_manager_service_healthy

Required

true

SRM Driver

Advanced

SRM Driver XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for SRM Driver, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value**API Name**

logback_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

SRM Driver Advanced Configuration Snippet (Safety Valve) for srm-monitoring.properties**Description**

For advanced use only. A string to be inserted into srm-monitoring.properties for this role only.

Related Name**Default Value****API Name**

srm-monitoring.properties_role_safety_valve

Required

false

SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties**Description**

For advanced use only. A string to be inserted into srm.properties for this role only.

Related Name

Default Value

API Name

srm.properties_role_safety_valve

Required

false

SRM Driver Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

STREAMS_REPLICATION_MANAGER_DRIVER_role_env_safety_valve

Required

false

Logs

SRM Driver Log Directory

Description

The log directory for log files of the role SRM Driver.

Related Name

log_dir

Default Value

/var/log/streams-replication-manager

API Name

log_dir

Required

false

SRM Driver Logging Threshold

Description

The minimum log level for SRM Driver logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

SRM Driver Maximum Log File Backups

Description

The maximum number of rolled log files to keep for SRM Driver logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

SRM Driver Max Log Size**Description**

The maximum size, in megabytes, per log file for SRM Driver logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

metrics.jetty.server.auth.password

Default Value

API Name

metrics.jetty.server.auth.password

Required

false

Metrics Reporter User Name

Description

User name used for the authentication on HTTP(S) metrics reporter endpoint.

Related Name

metrics.jetty.server.auth.username

Default Value

API Name

metrics.jetty.server.auth.username

Required

false

Enable Basic Authentication for Metrics Reporter

Description

Enable HTTP basic authentication for SRM driver's metrics reporter HTTP(S) endpoint.

Related Name

metrics.jetty.server.authentication.enabled

Default Value

false

API Name

metrics.jetty.server.authentication.enabled

Required

false

SSL Encryption for the Metrics Reporter

Description

Enable SSL encryption for the metrics endpoint.

Related Name

metrics.jetty.server.ssl.enabled

Default Value

false

API Name

metrics.jetty.server.ssl.enabled

Required

false

Metric Reporting Period

Description

The frequency at which metrics should be reported, in seconds.

Related Name

connectors.metrics.period

Default Value

30 second(s)

API Name

metrics.period

Required

false

Enable HTTP(S) Metrics Reporter

Description

Enable SRM driver metrics reporter HTTP(S) endpoint.

Related Name

mm.metrics.servlet.enable

Default Value

true

API Name

`mm.metrics.servlet.enable`**Required**`false`**Retry Count for SRM Driver****Description**

Number of times Streams Replication Manager Driver(s) will restart if a configured Kafka cluster is unavailable. The default value of -1 means infinite number of retries.

Related Name`mm.replication.restart.count`**Default Value**`-1`**API Name**`mm.replication.restart.count`**Required**`false`**Retry Delay for SRM Driver****Description**

The interval, in milliseconds, between attempted restarts of the SRM driver.

Related Name`mm.replication.restart.delay.ms`**Default Value**`10 second(s)`**API Name**`mm.replication.restart.delay.ms`**Required**`false`**Path for driver plugins****Description**

Path to directories immediately containing jars with plugins and their dependencies, uber-jars with plugins and their dependencies and classes of plugins and their dependencies.

Related Name`plugin.path`**Default Value**`/var/lib/kafka`**API Name**`plugin.path`**Required**`false`**Enable Heartbeats****Description**

Enables heartbeat emission by the SRM Driver. This is a global configuration that applies to all replications including disabled replications.

Related Name

emit.heartbeats.enabled

Default Value

true

API Name

streams.replication.manager.driver.emit.heartbeats.enabled

Required

false

Metrics Topics Creation Timeout for Driver**Description**

The timeout to use when creating the internal metrics topics. This timeout affects the rebalance process of the Driver cluster. When increasing this timeout value, ensure that you also increase 'Driver Rebalance Timeout' by at least the same amount.

Related Name

connectors.metrics.topic.creation.timeout.ms

Default Value

20 second(s)

API Name

streams.replication.manager.driver.metrics.topic.creation.timeout.ms

Required

false

Driver Rebalance Timeout**Description**

The maximum allowed time for each Driver to join the group once a rebalance has begun.

Related Name

workers.rebalance.timeout.ms

Default Value

1 minute(s)

API Name

streams.replication.manager.driver.rebalance.timeout.ms

Required

false

Streams Replication Manager Driver Target Cluster**Description**

Target cluster aliases for the srm-driver. When set, the srm-driver will collect data from all clusters, but will only write to the clusters specified here. Cluster aliases are comma separated.

Related Name

streams.replication.manager.driver.target.cluster

Default Value**API Name**

streams.replication.manager.driver.target.cluster

Required

false

Java Home Path Override**Description**

Java Home Path Override for Streams Replication Manager. If left empty, the java shipped with CM is used.

Related Name

streams.replication.manager.jdk.home

Default Value**API Name**

streams.replication.manager.jdk.home

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**HTTP Metrics Reporter Port****Description**

The port that the HTTP metrics reporter listens on.

Related Name

metrics.jetty.server.port

Default Value

26001

API Name

metrics.jetty.server.port

Required

true

HTTPS Metrics Reporter Port**Description**

The port that the HTTPS metrics reporter listens on.

Related Name

metrics.jetty.server.secureport

Default Value

26002

API Name

metrics.jetty.server.secureport

Required

true

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight
Default Value
100
API Name
rm_cpu_weight
Required
true

Custom Control Group Resources (overrides Cgroup settings)

Description
Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgroup command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***
Related Name
custom.cgroups
Default Value
API Name
rm_custom_resources
Required
false

Cgroup V2 I/O Weight

Description
Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.
Related Name
io.weight
Default Value
100
API Name
rm_io_weight
Required
true

Cgroup V1 Memory Hard Limit

Description
Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'
Related Name
memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes

not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**SRM Driver TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that SRM Driver might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

SRM Driver TLS/SSL Trust Store Password**Description**

The password for the SRM Driver TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for SRM Driver**Description**

Encrypt communication between clients and SRM Driver using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

SRM Driver TLS/SSL Server Keystore Key Password**Description**

The password that protects the private key contained in the keystore used when SRM Driver is acting as a TLS/SSL server.

Related Name

ssl.key.password

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

SRM Driver TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when SRM Driver is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

SRM Driver TLS/SSL Server Keystore File Password**Description**

The password for the SRM Driver keystore file.

Related Name

ssl.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

`stacks_collection_frequency`**Default Value**

5.0 second(s)

API Name`stacks_collection_frequency`**Required**

false

Stacks Collection Method**Description**

The method used to collect stacks. The `jstack` option involves periodically running the `jstack` command against the role's daemon process. The `servlet` method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the `servlet` method is selected, that HTTP endpoint is periodically scraped.

Related Name`stacks_collection_method`**Default Value**`jstack`**API Name**`stacks_collection_method`**Required**

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_cdh_version_validator`**Required**

true

Suppress Parameter Validation: JMX Exporter configuration YAML**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_jmx_exporter_yaml`**Required**`true`**Suppress Parameter Validation: SRM Driver Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver Log Directory parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_log_dir`**Required**`true`**Suppress Parameter Validation: SRM Driver XML Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver XML Override parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_logback_safety_valve`**Required**`true`**Suppress Parameter Validation: Metrics Reporter Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Reporter Password parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_metrics.jetty.server.auth.password`**Required**`true`**Suppress Parameter Validation: Metrics Reporter User Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Reporter User Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.jetty.server.auth.username

Required

true

Suppress Parameter Validation: HTTP Metrics Reporter Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metrics Reporter Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.jetty.server.port

Required

true

Suppress Parameter Validation: HTTPS Metrics Reporter Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTPS Metrics Reporter Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.jetty.server.secureport

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Suppress Parameter Validation: SRM Driver TLS/SSL Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: SRM Driver TLS/SSL Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: SRM Driver TLS/SSL Server Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Server Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: SRM Driver TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: SRM Driver TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Streams Replication Manager Driver Target Cluster

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Driver Target Cluster parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.driver.target.cluster

Required

true

Suppress Parameter Validation: Java Home Path Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.jdk.home

Required

true

Suppress Parameter Validation: SRM Driver Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams_replication_manager_driver_role_env_safety_valve

Required

true

Suppress Health Test: Distributed Herder Health Test

Description

Whether to suppress the results of the Distributed Herder Health Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager-streams_replication_manager_driver-7.2.19-distributed_herder_status

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_host_health

Required

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_otelcol_health

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_sc_cm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_unexpected_exits

Required

true

SRM Service**Advanced****SRM Service XML Override****Description**

For advanced use only, replace entire XML in the logback configuration file for SRM Service, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value**API Name**

logback_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

SRM Service Advanced Configuration Snippet (Safety Valve) for srm-monitoring.properties**Description**

For advanced use only. A string to be inserted into srm-monitoring.properties for this role only.

Related Name**Default Value****API Name**

srm-monitoring.properties_role_safety_valve

Required

false

SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml**Description**

For advanced use only. A string to be inserted into srm-service.yaml for this role only.

Related Name**Default Value****API Name**

srm-service.yaml_role_safety_valve

Required

false

SRM Service Advanced Configuration Snippet (Safety Valve) for srm.properties**Description**

For advanced use only. A string to be inserted into srm.properties for this role only.

Related Name**Default Value**

API Name

srm.properties_role_safety_valve

Required

false

SRM Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

STREAMS_REPLICATION_MANAGER_SERVICE_role_env_safety_valve

Required

false

Logs

SRM Service Log Directory

Description

The log directory for log files of the role SRM Service.

Related Name

log_dir

Default Value

/var/log/streams-replication-manager

API Name

log_dir

Required

false

SRM Service Logging Threshold

Description

The minimum log level for SRM Service logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

SRM Service Maximum Log File Backups

Description

The maximum number of rolled log files to keep for SRM Service logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

SRM Service Max Log Size**Description**

The maximum size, in megabytes, per log file for SRM Service logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Other**SRM Service Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Service Metric Migrator Backoff**Description**

The frequency at which the progress of the Streams Replication Manager (SRM) Service Metrics Migrator is checked.

Related Name

streams.replication.manager.migrator.monitor.backoff.ms

Default Value

2 minute(s)

API Name

streams.replication.manager.migrator.monitor.backoff.ms

Required

false

Service Metric Migrator Max Offset Lag**Description**

The amount of offsets that the streams application in the Streams Replication Manager (SRM) Service Metrics Migrator is allowed to lag behind and still be considered up to date. When left empty, the migration logic will automatically calculate the maximum offset lag based on the Kafka Streams application configuration and the amount of metrics messages. Low offset lag values result in more up-to-date metrics processing following the upgrade, but also increase the time required for the upgrade to finish.

Related Name

streams.replication.manager.migrator.monitor.max.offset.lag

Default Value**API Name**

streams.replication.manager.migrator.monitor.max.offset.lag

Required

false

Service Metric Migrator Minimum Consecutive Successful Checks**Description**

The number of consecutive checks where the lag must be within the configured threshold to consider the Streams Replication Manager (SRM) Service Metrics Migrator successful. All target clusters of the SRM Service must be caught up for a check to be successful.

Related Name

streams.replication.manager.migrator.monitor.min.consecutive.successful.checks

Default Value

3

API Name

streams.replication.manager.migrator.monitor.min.consecutive.successful.checks

Required

false

Service Metric Migrator Stop Delay

Description

The amount of time in milliseconds that the Streams Replication Manager (SRM) Service Metrics Migrator processes metrics after the streams application is considered caught up

Related Name

streams.replication.manager.migrator.monitor.stop.delay.ms

Default Value

1 minute(s)

API Name

streams.replication.manager.migrator.monitor.stop.delay.ms

Required

false

Service Metric Migrator Timeout

Description

The time in milliseconds after the Streams Replication Manager (SRM) Service Metrics Migrator times out.

Related Name

streams.replication.manager.migrator.monitor.timeout.ms

Default Value

1 hour(s)

API Name

streams.replication.manager.migrator.monitor.timeout.ms

Required

false

SRM Service Co-Located Service Username

Description

The service username to be added to the accepted basic authentication credential list. This username is exported to dependent services in the cluster, which can be used to access SRM Service. If left empty, there will be no service user available, which might cause dependent services to fail to connect to SRM Service.

Related Name

Description

SRM Service Metrics port.

Related Name

streams.replication.manager.service.metric.port

Default Value

6672

API Name

streams.replication.manager.service.metric.port

Required

true

SSL Encryption For HTTP Metric Reporter

Description

Enable SSL Encryption for HTTP Metric Endpoint.

Related Name

streams.replication.manager.service.metric.ssl.enabled

Default Value

false

API Name

streams.replication.manager.service.metric.ssl.enabled

Required

false

SRM Service Metrics Https Port

Description

SRM Service Metrics https port.

Related Name

streams.replication.manager.service.metric.ssl.port

Default Value

6673

API Name

streams.replication.manager.service.metric.ssl.port

Required

true

HTTP Metric Report User

Description

The username used for Basic Authentication.

Related Name

streams.replication.manager.service.metric.user

Default Value

API Name

streams.replication.manager.service.metric.user

Required

false

Metrics Topics Creation Timeout for Service

Description

The timeout to use when creating the internal metrics topics.

Related Name

metrics.topic.creation.timeout.ms

Default Value

20 second(s)

API Name

streams.replication.manager.service.metrics.topic.creation.timeout.ms

Required

false

SRM Service Netty Native Working Dir

Description

Directory location for Netty to be used as the native working directory.

Related Name

streams.replication.manager.service.netty.native.working.dir

Default Value

/var/lib/streams_replication_manager/service/netty

API Name

streams.replication.manager.service.netty.native.working.dir

Required

false

SRM Service Port

Description

SRM Service port.

Related Name

streams.replication.manager.service.port

Default Value

6670

API Name

streams.replication.manager.service.port

Required

true

SRM Service Advertised API Root Path For Remote Queries

Description

The advertised API root path of SRM Service for remote queries. If SRM Service can only be accessed through a proxy from outside the cluster, and that proxy has a prefix for the SRM Service REST API root, this config should match the prefix of the proxy. If left empty, no prefix will be advertised.

Related Name

streams.replication.manager.service.remote.advertised.api.root.path

Default Value**API Name**

streams.replication.manager.service.remote.advertised.api.root.path

Required

false

SRM Service Advertised Host For Remote Queries**Description**

The advertised host of SRM Service for remote queries. If SRM Service can only be accessed through a proxy from outside the cluster, this config should match the host of the proxy. If left empty, falls back to the hostname of the SRM Service host.

Related Name

streams.replication.manager.service.remote.advertised.host

Default Value**API Name**

streams.replication.manager.service.remote.advertised.host

Required

false

SRM Service Advertised Protocol For Remote Queries**Description**

The advertised protocol of SRM Service for remote queries. If SRM Service can only be accessed through a proxy from outside the cluster, this config should match the protocol of the proxy. If 'inferred' is selected, falls back to the protocol of SRM Service.

Related Name

streams.replication.manager.service.remote.advertised.protocol

Default Value

inferred

API Name

streams.replication.manager.service.remote.advertised.protocol

Required

false

SRM Service Advertisement Topics Replication Factor For Remote Queries**Description**

The replication factor of the topics used by the SRM Service to advertise itself for remote queries. This configuration is only applied when the Service is started for the first time, changing the property afterwards has no effect.

Related Name

streams.replication.manager.service.remote.advertisement.topic.replication.factor

Default Value

3

API Name

streams.replication.manager.service.remote.advertisement.topic.replication.factor

Required

false

Streams Replication Manager Service Remote Target Clusters**Description**

Remote target cluster aliases to query data from, in a comma separate list. There must be another installation of SRM Service which targets the clusters listed here.

Related Name

streams.replication.manager.service.remote.target.clusters

Default Value**API Name**

streams.replication.manager.service.remote.target.clusters

Required

false

SRM Service Https Port**Description**

SRM Service https port.

Related Name

streams.replication.manager.service.ssl.port

Default Value

6671

API Name

streams.replication.manager.service.ssl.port

Required

true

Additional Configs For Streams Application Running Inside SRM Service**Description**

A list of configs that will be set for the Streams Application running inside the SRM Service. The format of each configuration: <config_key>=<config_value>.

Related Name

streams.replication.manager.service.streams.application.configs

Default Value**API Name**

streams.replication.manager.service.streams.application.configs

Required

false

SRM Service Streams Cache Maximum Bytes Buffering**Description**

SRM Service Kafka Streams metrics processor maximum buffering bytes to cache. Maximum number of memory bytes to be used for buffering by the Kafka Streams metrics processor.

Related Name

streams.replication.manager.service.streams.cache.max.bytes.buffering

Default Value

20 MiB

API Name

streams.replication.manager.service.streams.cache.max.bytes.buffering

Required

true

SRM Service Streams Commit Interval**Description**

SRM Service Kafka Streams metrics processor commit interval in ms. The frequency in milliseconds with which to save the position of the Kafka Streams metrics processor.

Related Name

streams.replication.manager.service.streams.commit.interval.ms

Default Value

2 minute(s)

API Name

streams.replication.manager.service.streams.commit.interval.ms

Required

true

SRM Service Metrics Grace Period**Description**

SRM Service Metrics grace period in ms. Out-of-order events are rejected if the event arrives after the grace period of the event's associated window has passed. That is, the event's timestamp is greater than the window's end time and grace-period combined.

Related Name

streams.replication.manager.service.streams.metrics.grace

Default Value

5 minute(s)

API Name

streams.replication.manager.service.streams.metrics.grace

Required

true

SRM Service Metrics Retention Period**Description**

SRM Service Metrics retention period in ms. The retention time specifies for how long metrics are retained. Metrics can be queried for the length of this duration, and are discarded after the retention period passes. Note that the retention period must be at least long enough to contain the windowed data's entire life cycle, from window-start through window-end, and for the entire grace period. (> 60 000 + metrics.grace)

Related Name

`streams.replication.manager.service.streams.metrics.retention`**Default Value**

2 hour(s)

API Name`streams.replication.manager.service.streams.metrics.retention`**Required**

true

SRM Service Streams Thread Count**Description**

The number of SRM Service Kafka Streams metrics processor threads to execute stream processing.

Related Name`streams.replication.manager.service.streams.num.stream.threads`**Default Value**

4

API Name`streams.replication.manager.service.streams.num.stream.threads`**Required**

false

Streams Applications Internal Topics Replication Factor**Description**

The replication factor of the internal topics created by the Streams applications. -1 means that the broker default will be used. This configuration is only applied when the Service is started for the first time, changing the property afterwards has no effect.

Related Name`streams.replication.manager.service.streams.replication.factor`**Default Value**

3

API Name`streams.replication.manager.service.streams.replication.factor`**Required**

false

Metric Aggregator Streams Applications State Root Directory**Description**

Directory location for state stores that the metric aggregator streams applications use. Changing the path for an existing service can cause slightly slower startup on the next start. The RocksDB shared objects used by the KStreams application will be also extracted into this location.

Related Name`streams.replication.manager.service.streams.state.dir`**Default Value**`/var/lib/streams_replication_manager/kstreams/data`**API Name**`streams.replication.manager.service.streams.state.dir`

Required

false

Streams Replication Manager Service Target Cluster**Description**

Target cluster aliases from which the SRM Service collects data. Cluster aliases are comma separated. Important note: the SRM Service v1 REST API will report the metrics of the first target cluster in the list.

Related Name

streams.replication.manager.service.target.cluster

Default Value**API Name**

streams.replication.manager.service.target.cluster

Required

true

SRM Service Use Basic Authentication**Description**

Whether to use basic authentication for this service or not.

Related Name

streams.replication.manager.service.use.basic.auth

Default Value

false

API Name

streams.replication.manager.service.use.basic.auth

Required

false

Excluded SSL/TLS Cipher Suites**Description**

A list of cipher suites which are excluded. If left empty, falls back to the server default.

Related Name

streams.replication.manager.ssl.excludedCipherSuites

Default Value**API Name**

streams.replication.manager.ssl.excludedCipherSuites

Required

false

Excluded SSL/TLS Protocols**Description**

A list of protocols which are excluded. If left empty, falls back to the server default.

Related Name

streams.replication.manager.ssl.excludedProtocols

Default Value

API Name

streams.replication.manager.ssl.excludedProtocols

Required

false

SSL Keystore Type

Description

The keystore type. Required if SSL is enabled for the SRM Service. For example, PKCS12 or JKS. If it is left empty then the keystore type will come from CM settings.

Related Name

streams.replication.manager.ssl.keyStoreType

Default Value

API Name

streams.replication.manager.ssl.keyStoreType

Required

false

Supported SSL/TLS Cipher Suites

Description

A list of cipher suites which are supported. If left empty, falls back to the server default.

Related Name

streams.replication.manager.ssl.supportedCipherSuites

Default Value

API Name

streams.replication.manager.ssl.supportedCipherSuites

Required

false

Supported SSL/TLS Protocols

Description

A list of protocols which are supported. If left empty, falls back to the server default.

Related Name

streams.replication.manager.ssl.supportedProtocols

Default Value

API Name

streams.replication.manager.ssl.supportedProtocols

Required

false

SSL TrustStore Type

Description

The truststore type. Required if SSL is enabled for the SRM Service. For example, PKCS12 or JKS. If it is left empty then the keystore type will come from CM settings.

Related Name

streams.replication.manager.ssl.trustStoreType

Default Value**API Name**

streams.replication.manager.ssl.trustStoreType

Required

false

SSL ValidateCerts**Description**

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates. Note: if this is enabled, the certificate revocation method (CRLDP/OCSP) is also needed. This can be done by overriding Dropwizard configuration with Java system properties. E.g: `-Ddw.server.applicationConnectors[0].enableCRLDP=true` (more details at <https://www.dropwizard.io/en/latest/manual/core.html>)

Related Name

streams.replication.manager.ssl.validateCerts

Default Value

false

API Name

streams.replication.manager.ssl.validateCerts

Required

false

SSL ValidatePeers**Description**

Whether or not to validate TLS peer certificates.

Related Name

streams.replication.manager.ssl.validatePeers

Default Value

false

API Name

streams.replication.manager.ssl.validatePeers

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**SRM Service Advertised Port For Remote Queries****Description**

The advertised port of SRM Service for remote queries. If SRM Service can only be accessed through a proxy from outside the cluster, this config should match the port of the proxy. If left empty, falls back to SRM Service Port or SRM Service Https Port.

Related Name

streams.replication.manager.service.remote.advertised.port

Default Value**API Name**

streams.replication.manager.service.remote.advertised.port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

`rm_memory_soft_limit_v1`**Required**`true`**Cgroup V2 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.high`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v2`**Required**`true`**Security****SRM Service TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that SRM Service might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`ssl.truststore.location`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**SRM Service TLS/SSL Trust Store Password****Description**

The password for the SRM Service TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name`ssl.truststore.password`**Default Value****API Name**`ssl_client_truststore_password`

Required

false

Enable TLS/SSL for SRM Service**Description**

Encrypt communication between clients and SRM Service using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

SRM Service TLS/SSL Server Keystore Key Password**Description**

The password that protects the private key contained in the keystore used when SRM Service is acting as a TLS/SSL server.

Related Name

ssl.key.password

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

SRM Service TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when SRM Service is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

SRM Service TLS/SSL Server Keystore File Password**Description**

The password for the SRM Service keystore file.

Related Name

`ssl.keystore.password`**Default Value****API Name**`ssl_server_keystore_password`**Required**`false`**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name`stacks_collection_data_retention`**Default Value**`100 MiB`**API Name**`stacks_collection_data_retention`**Required**`false`**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name`stacks_collection_directory`**Default Value****API Name**`stacks_collection_directory`**Required**`false`**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

Related Name`stacks_collection_enabled`**Default Value**`false`**API Name**`stacks_collection_enabled`

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: SRM Service Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: SRM Service XML Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service XML Override parameter.

Required	true

Suppress Parameter Validation: Supported SSL/TLS Protocols

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Supported SSL/TLS Protocols parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_streams.replication.manager.ssl.supportedprotocols
Required	true

Suppress Parameter Validation: SSL TrustStore Type

Description	
--------------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.ssl.truststoretype

Required

true

Suppress Parameter Validation: SSL ValidateCerts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.ssl.validatecerts

Required

true

Suppress Parameter Validation: SSL ValidatePeers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidatePeers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.ssl.validatepeers

Required

true

Suppress Parameter Validation: SRM Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams_replication_manager_service_role_env_safety_valve

Required

true

Suppress Health Test: Metrics Processor Health Test**Description**

Whether to suppress the results of the Metrics Processor Health Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager-streams_replication_manager_service-7.2.19-metrics_processor_status

Required

true

Suppress Health Test: SRM Service - Service Discovery Heartbeat Producers Aggregated Health Test**Description**

Whether to suppress the results of the SRM Service - Service Discovery Heartbeat Producers Aggregated Health Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager-streams_replication_manager_service-7.2.19-service_discovery_heartbeat_producers_aggregated_status

Required

true

Suppress Health Test: SRM Service - Remote SRM Service Discovery Endpoint Groups Aggregated Health Test**Description**

Whether to suppress the results of the SRM Service - Remote SRM Service Discovery Endpoint Groups Aggregated Health Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager-streams_replication_manager_service-7.2.19-service_discovery_remote_endpoint_groups_aggregated_status

Required

true

Suppress Health Test: SRM Service - Remote SRM Service Discovery Endpoint Groups Validated With Health Checks Aggregated Health Test**Description**

Whether to suppress the results of the SRM Service - Remote SRM Service Discovery Endpoint Groups Validated With Health Checks Aggregated Health Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager-streams_replication_manager_service-7.2.19-service_discovery_remote_endpoint_groups_with_health_check_aggregated_status

Required

true

Suppress Health Test: SRM Service - Remote SRM Service Discovery Topic Consumers Aggregated Health Test**Description**

Whether to suppress the results of the SRM Service - Remote SRM Service Discovery Topic Consumers Aggregated Health Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager-streams_replication_manager_service-7.2.19-service_discovery_remote_topic_consumers_aggregated_status

Required

true

Suppress Health Test: SRM Streams App Kafka Connection Health Test**Description**

Whether to suppress the results of the SRM Streams App Kafka Connection Health Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager-streams_replication_manager_service-7.2.19-streams_app_kafka_connection_status

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_otelcol_health

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_unexpected_exits

API Name

core_client_java_opts

Required

false

Storage Operations Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Storage Operations Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

STORAGEOPERATIONS_role_env_safety_valve

Required

false

Logs**Storage Operations Logging Threshold****Description**

The minimum log level for Storage Operations logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Storage Operations Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Storage Operations logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Storage Operations Max Log Size**Description**

The maximum size, in megabytes, per log file for Storage Operations logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Storage Operations Log Directory**Description**

Directory where Storage Operations will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/

API Name

storageoperations_log_dir

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

`otelcol_extensions`

Required

`false`

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value****API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify \$INFRA(cdp_request_signer_password) when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL**Description**

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_url)

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username**Description**

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_exporters

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_extensions

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_processors

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_rtm_logs_receivers

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

API Name

otelcol_rtm_logs_service

Required

false

OpenTelemetry Collector Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

90

API Name

client_config_priority

Required

true

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management**Client Java Heap Size in Bytes****Description**

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

256 MiB

API Name

core_client_java_heapsize

Required

false

Cgroup V1 BLKIO Weight**Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

`rm_memory_hard_limit_v2`**Required**`true`**Cgroup V1 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v1`**Required**`true`**Cgroup V2 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.high`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v2`**Required**`true`**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name`stacks_collection_data_retention`**Default Value**

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

History URL Template

Description

Template to generate the History URL for a particular Tez Application. Template replaces `__APPLICATION_ID__` with the actual applicationId and `__HISTORY_URL_BASE__` with the value from the `tez.tez-ui.history-url.base` config property

Related Name

tez.am.tez-ui.history-url.template

Default Value

`__HISTORY_URL_BASE__?viewPath=%2F%23%2Ftez-app%2F__APPLICATION_ID__`

API Name

tez.am.tez-ui.history-url.template

Required

true

Tez Application Master View ACLs

Description

Application Master view ACLs. This allows the specified users/groups to view the status of the Application Master and all DAGs that run within this Application Master. Value format: Comma separated list of users, followed by whitespace, followed by a comma separated list of groups.

Related Name

tez.am.view-acls

Default Value

*

API Name

tez.am.view-acls

Required

false

Tez Additional Classpath

Description

Specify additional classpath information to be used for Tez AM and all containers.

Related Name

tez.cluster.additional.classpath.prefix

Default Value

API Name

tez.cluster.additional.classpath.prefix

Required

false

Maximum Number of Counters

Description

The number of allowed counters for the executing DAG.

Related Name

tez.counters.max

Default Value

10000

API Name

tez.counters.max

Required

true

Maximum Counter Groups

Description

The number of allowed counter groups for the executing DAG.

Related Name

tez.counters.max.groups

Default Value

3000

API Name

tez.counters.max.groups

Required

true

Whether to generate debug artifacts

Description

Generate debug artifacts such as a text representation of the submitted DAG plan.

Related Name

tez.generate.debug.artifacts

Default Value

false

API Name

tez.generate.debug.artifacts

Required

true

Grouped Split Maximum Size**Description**

Upper bound on the size (in bytes) of a grouped split, to avoid generating excessively large split.

Related Name

tez.grouping.max-size

Default Value

1 GiB

API Name

tez.grouping.max-size

Required

true

Grouped Split Minimum Size**Description**

Lower bound on the size (in bytes) of a grouped split, to avoid generating too many splits.

Related Name

tez.grouping.min-size

Default Value

16 MiB

API Name

tez.grouping.min-size

Required

true

Queue Capacity Multiplier**Description**

The multiplier for available queue capacity when determining number of tasks for a Vertex. 1.7 with 100% queue available implies generating a number of tasks roughly equal to 170% of the available containers on the queue.

Related Name

tez.grouping.split-waves

Default Value

1.7

API Name

tez.grouping.split-waves

Required

true

Tez history events directory**Description**

Directory where proto logger writes the history events, should generally be sys.db database directory.

Related Name

tez.history.logging.proto-base-dir

Default Value

/warehouse/tablespace/managed/hive/sys.db

API Name

tez.history.logging.proto-base-dir

Required

true

DAGs per Group**Description**

DAGs per group.

Related Name

tez.history.logging.timeline-cache-plugin.old-num-dags-per-group

Default Value

5

API Name

tez.history.logging.timeline-cache-plugin.old-num-dags-per-group

Required

true

Enable Intermediate Data Compression**Description**

Whether intermediate data should be compressed or not.

Related Name

tez.runtime.compress

Default Value

true

API Name

tez.runtime.compress

Required

true

Codec for Compressing Intermediate Data**Description**

The codec to be used if compressing intermediate data. Only applicable if tez.runtime.compress is enabled.

Related Name

tez.runtime.compress.codec

Default Value

org.apache.hadoop.io.compress.SnappyCodec

API Name

tez.runtime.compress.codec

Required

true

Publish Configuration Information**Description**

Whether to publish configuration information to History logger.

Related Name

tez.runtime.convert.user-payload.to.history-text

Default Value

false

API Name

tez.runtime.convert.user-payload.to.history-text

Required

true

Sort Buffer Size**Description**

The size of the sort buffer when output needs to be sorted.

Related Name

tez.runtime.io.sort.mb

Default Value

272 MiB

API Name

tez.runtime.io.sort.mb

Required

true

Enable Accessing the Local Files Directly**Description**

If the shuffle input is on the local host bypass the http fetch and access the files directly.

Related Name

tez.runtime.optimize.local.fetch

Default Value

true

API Name

tez.runtime.optimize.local.fetch

Required

true

Pipeline Sorter Sort Threads

Description

Tez runtime pipelined sorter sort threads.

Related Name

tez.runtime.pipelined.sorter.sort.threads

Default Value

2

API Name

tez.runtime.pipelined.sorter.sort.threads

Required

true

Fraction of Memory to Retain Shuffled Data

Description

Fraction (0-1) of the available memory which can be used to retain shuffled data.

Related Name

tez.runtime.shuffle.fetch.buffer.percent

Default Value

0.6

API Name

tez.runtime.shuffle.fetch.buffer.percent

Required

true

Keep the Shuffle Connection Alive

Description

This property determines if the shuffle connection should be kept alive. If not, then the connection needs to be reestablished.

Related Name

tez.runtime.shuffle.keep-alive.enabled

Default Value

true

API Name

tez.runtime.shuffle.keep-alive.enabled

Required

true

Maximum Percent of Shuffle Segment

Description

This property determines the maximum size of a shuffle segment which can be fetched to memory. Fraction (0-1) of shuffle memory (after applying tez.runtime.shuffle.fetch.buffer.percent).

Related Name

tez.runtime.shuffle.memory.limit.percent

Default Value

0.25

API Name

tez.runtime.shuffle.memory.limit.percent

Required

true

Buffer Size for Unordered Output

Description

The size of the buffer when output does not require to be sorted.

Related Name

tez.runtime.unordered.output.buffer.size-mb

Default Value

100 MiB

API Name

tez.runtime.unordered.output.buffer.size-mb

Required

true

Timeout for Application Master for a Task

Description

Time (in seconds) for which the Tez Application Master should wait for a DAG to be submitted before shutting down.

Related Name

tez.session.am.dag.submit.timeout.secs

Default Value

5 minute(s)

API Name

tez.session.am.dag.submit.timeout.secs

Required

true

Timeout for Application Master to Come up

Description

Time (in seconds) to wait for Application Master to come up when trying to submit a DAG from the client.

Related Name

tez.session.client.timeout.secs

Default Value

-1 second(s)

API Name

tez.session.client.timeout.secs

Required

true

ScatterGather Connection Maximum Fraction of Tasks

Description

In case of a ScatterGather connection, once this fraction of source tasks have completed, all tasks on the current vertex can be scheduled. Number of tasks ready for scheduling on the current vertex scales linearly between min-fraction and max-fraction.

Related Name

tez.shuffle-vertex-manager.max-src-fraction

Default Value

0.4

API Name

tez.shuffle-vertex-manager.max-src-fraction

Required

true

ScatterGather Connection Minimum Fraction of Tasks**Description**

In case of a ScatterGather connection, the fraction of source tasks which should complete before tasks for the current vertex are schedule.

Related Name

tez.shuffle-vertex-manager.min-src-fraction

Default Value

0.2

API Name

tez.shuffle-vertex-manager.min-src-fraction

Required

true

TEZ Staging directory**Description**

The staging dir used while submitting DAGs.

Related Name

tez.staging-dir

Default Value

/tmp/\$user.name/staging

API Name

tez.staging-dir

Required

true

Heartbeat Interval**Description**

Time interval at which task counters are sent to the Application Master.

Related Name

tez.task.am.heartbeat.counter.interval-ms.max

Default Value

4 second(s)

API Name

tez.task.am.heartbeat.counter.interval-ms.max

Required

true

Generate Counters on a Per-Edge Basis**Description**

Whether to generate counters on a per-edge basis for a Tez DAG. Helpful for in-depth analysis.

Related Name

tez.task.generate.counters.per.io

Default Value

true

API Name

tez.task.generate.counters.per.io

Required

true

Maximum Time Between Tasks**Description**

The maximum amount of time, in seconds, to wait before a task asks an Application Master for another task.

Related Name

tez.task.get-task.sleep.interval-ms.max

Default Value

200 millisecond(s)

API Name

tez.task.get-task.sleep.interval-ms.max

Required

true

Tez Task Command Line Options**Description**

Java options for tasks. The Xmx value is derived based on tez.task.resource.memory.mb and is 80% of this value by default. Used only if the value is not specified explicitly by the DAG definition.

Related Name

tez.task.launch.cmd-opts

Default Value

```
-XX:+PrintGCDetails -verbose:gc -XX:+UseNUMA -XX:+UseG1GC -XX:+ResizeTLAB
-XX:+IgnoreUnrecognizedVMOptions --add-opens=java.base/java.net=ALL-
UNNAMED --add-opens=java.base/java.util=ALL-UNNAMED --add-opens=java.base/
java.util.concurrent.atomic=ALL-UNNAMED --add-opens=java.base/java.util.regex=ALL-
UNNAMED --add-opens=java.base/java.lang=ALL-UNNAMED --add-opens=java.base/
java.time=ALL-UNNAMED --add-opens=java.base/java.io=ALL-UNNAMED --add-
opens=java.base/java.nio=ALL-UNNAMED
```

API Name

tez.task.launch.cmd-opts

Required

true

Tez Task Environment Settings

Description

Additional execution environment entries for tez. This is not an additive property. You must preserve the original value if you want to have access to native libraries. Used only if the value is not specified explicitly by the DAG definition.

Related Name

tez.task.launch.env

Default Value

LD_LIBRARY_PATH=\$PARCELS_ROOT/CDH/lib/hadoop/lib/native

API Name

tez.task.launch.env

Required

true

Maximum Number of Events in a Heartbeat

Description

Maximum number of events to fetch from the Application Master by the tasks in a single heartbeat.

Related Name

tez.task.max-events-per-heartbeat

Default Value

500

API Name

tez.task.max-events-per-heartbeat

Required

true

Tez Task Memory

Description

The amount of memory to be used by launched tasks. Used only if the value is not specified explicitly by the DAG definition.

Related Name

tez.task.resource.memory.mb

Default Value

1536 MiB

API Name

tez.task.resource.memory.mb

Required

true

Tez UI URL Base

Description

The base of the Tez UI URL.

Related Name

tez.tez-ui.history-url.base

Default Value

API Name

tez.tez-ui.history-url.base

Required

false

Use Hadoop Libs

Description

This being true implies that the deployment is relying on hadoop jars being available on the cluster on all nodes.

Related Name

tez.use.cluster.hadoop-libs

Default Value

false

API Name

tez.use.cluster.hadoop-libs

Required

true

Enable Yarn Timeline-Service

Description

Timeline service version we're currently using.

Related Name

yarn.timeline-service.enabled

Default Value

false

API Name

yarn.timeline-service.enabled

Required

true

YARN Service

Description

Name of the YARN service that this Tez service instance depends on

Related Name

Default Value

API Name

yarn_service

Required

true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory

Description

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml

Description

Whether to suppress configuration warnings produced by the Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_tez-conf/tez-site.xml_client_config_safety_valve

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

	false
API Name	service_config_suppression_gateway_count_validator
Required	true

Suppress Parameter Validation: System Group

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value
false

API Name
service_config_suppression_process_groupname

Required
true

Suppress Parameter Validation: System User

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value
false

API Name
service_config_suppression_process_username

Required
true

Suppress Parameter Validation: Service Triggers

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value
false

API Name
service_config_suppression_service_triggers

Required
true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Tez Application Master Command Line Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master Command Line Options parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.launch.cmd-opts

Required

true

Suppress Parameter Validation: Tez Application Master Environment Settings**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master Environment Settings parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.launch.env

Required

true

Suppress Parameter Validation: Number of Recovery Runs**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Recovery Runs parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.max.app.attempts

Required

true

Suppress Parameter Validation: History URL Template

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the History URL Template parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.tez-ui.history-url.template

Required

true

Suppress Parameter Validation: Tez Application Master View ACLs

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master View ACLs parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.view-acls

Required

true

Suppress Parameter Validation: Tez Additional Classpath

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Additional Classpath parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.cluster.additional.classpath.prefix

Required

true

Suppress Parameter Validation: Tez history events directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez history events directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.history.logging.proto-base-dir

Required

true

Suppress Parameter Validation: DAGs per Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the DAGs per Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_tez.history.logging.timeline-cache-plugin.old-num-dags-per-group

Required

true

Suppress Parameter Validation: Codec for Compressing Intermediate Data

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Codec for Compressing Intermediate Data parameter.

Related Name

Default Value

false

API Name

service_config_suppression_tez.runtime.compress.codec

Required

true

Suppress Parameter Validation: TEZ Staging directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the TEZ Staging directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_tez.staging-dir

Required

true

Suppress Parameter Validation: Tez Task Command Line Options

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Task Command Line Options parameter.

Related Name

Default Value

false

API Name

service_config_suppression_tez.task.launch.cmd-opts

Required

true

Suppress Parameter Validation: Tez Task Environment Settings

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Task Environment Settings parameter.

Related Name

Default Value

false

API Name

service_config_suppression_tez.task.launch.env

Required

true

Suppress Parameter Validation: Tez UI URL Base

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez UI URL Base parameter.

Related Name

Default Value

false

API Name

service_config_suppression_tez.tez-ui.history-url.base

Required

true

Suppress Parameter Validation: Tez Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_tez_service_env_safety_valve

Required

true

YARN Properties in Cloudera Runtime 7.3.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/hadoop

API Name

client_config_root_dir

Required

true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

Description

For advanced use only, a string to be inserted into the client configuration for mapred-site.xml.

Related Name**Default Value****API Name**

mapreduce_client_config_safety_valve

Required

false

Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh

Description

For advanced use only, key-value pairs (one on each line) to be inserted into the client configuration for hadoop-env.sh

Related Name

Default Value**API Name**

mapreduce_client_env_safety_valve

Required

false

Client Java Configuration Options**Description**

These are Java command-line arguments. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name**Default Value**

-Djava.net.preferIPv4Stack=true -Dhadoop.metrics.log.level=WARN

API Name

mapreduce_client_java_opts

Required

false

YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

For advanced use only, a string to be inserted into the client configuration for yarn-site.xml.

Related Name**Default Value****API Name**

yarn_client_config_safety_valve

Required

false

Compression**Compression Level of Codecs****Description**

Compression level for the codec used to compress MapReduce outputs. Default compression is a balance between speed and compression ratio.

Related Name

zlib.compress.level

Default Value

DEFAULT_COMPRESSION

API Name

zlib_compress_level

Required

false

Logs

Gateway Logging Threshold

Description

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Monitoring

Enable Log Event Capture

Description

When set, each role identifies important log events and forwards them to Cloudera Manager.

Related Name**Default Value**

true

API Name

catch_events

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

92

API Name

client_config_priority

Required

true

Client Failover Sleep Base Time**Description**

Base sleep time between failover attempts. Used only if RM HA is enabled.

Related Name

yarn.client.failover-sleep-base-ms

Default Value

100 millisecond(s)

API Name

client_failover_sleep_base

Required

false

Client Failover Sleep Max Time**Description**

Maximum sleep time between failover attempts. Used only if RM HA is enabled.

Related Name

yarn.client.failover-sleep-max-ms

Default Value

2 second(s)

API Name

client_failover_sleep_max

Required

false

Enable MapReduce Encrypted Intermediate Data**Description**

Encryption for intermediate MapReduce spills. If enabled, restricts the number of attempts of the job to 1.

Related Name

mapreduce.job.encrypted-intermediate-data

Default Value

false

API Name

encrypted_intermediate_data

Required

false

MapReduce Encrypted Intermediate Data Buffer Size**Description**

Buffer size for the stream written to disk after encryption.

Related Name

mapreduce.job.encrypted-intermediate-data.buffer.kb

Default Value

128 KiB

API Name

encrypted_intermediate_data_buffer_kb

Required

false

MapReduce Encrypted Intermediate Data Key Size

Description

Length of key used for encryption.

Related Name

mapreduce.job.encrypted-intermediate-data-key-size-bits

Default Value

128

API Name

encrypted_intermediate_data_key_size_bits

Required

false

Running Job History Location

Description

Location to store the job history files of running jobs. This is a path on the host where the JobTracker is running.

Related Name

hadoop.job.history.location

Default Value

/var/log/hadoop-mapreduce/history

API Name

hadoop_job_history_dir

Required

false

SequenceFile I/O Buffer Size

Description

Size of buffer for read and write operations of SequenceFiles.

Related Name

io.file.buffer.size

Default Value

64 KiB

API Name

io_file_buffer_size

Required

false

I/O Sort Factor**Description**

The number of streams to merge at the same time while sorting files. That is, the number of sort heads to use during the merge sort on the reducer side. This determines the number of open file handles. Merging more files in parallel reduces merge sort iterations and improves run time by eliminating disk I/O. Note that merging more files in parallel uses more memory. If 'io.sort.factor' is set too high or the maximum JVM heap is set too low, excessive garbage collection will occur. The Hadoop default is 10, but Cloudera recommends a higher value. Will be part of generated client configuration.

Related Name

mapreduce.task.io.sort.factor

Default Value

64

API Name

io_sort_factor

Required

false

I/O Sort Memory Buffer (MiB)**Description**

The total amount of memory buffer, in megabytes, to use while sorting files. Note that this memory comes out of the user JVM heap size (meaning total user JVM heap - this amount of memory = total user usable heap space). Note that Cloudera's default differs from Hadoop's default; Cloudera uses a bigger buffer by default because modern machines often have more RAM. The smallest value across all TaskTrackers will be part of generated client configuration.

Related Name

mapreduce.task.io.sort.mb

Default Value

256 MiB

API Name

io_sort_mb

Required

false

I/O Sort Spill Percent**Description**

The soft limit in either the buffer or record collection buffers. When this limit is reached, a thread will begin to spill the contents to disk in the background. Note that this does not imply any chunking of data to the spill. A value less than 0.5 is not recommended. The syntax is in decimal units; the default is 80% and is formatted 0.8. Will be part of generated client configuration.

Related Name

mapreduce.map.sort.spill.percent

Default Value

0.8

API Name

io_sort_spill_percent

Required

false

Use Compression on Map Outputs**Description**

If enabled, uses compression on the map outputs before they are sent across the network. Will be part of generated client configuration.

Related Name

mapreduce.map.output.compress

Default Value

true

API Name

mapred_compress_map_output

Required

false

Compression Codec of MapReduce Map Output**Description**

For MapReduce map outputs that are compressed, specify the compression codec to use. Will be part of generated client configuration.

Related Name

mapreduce.map.output.compress.codec

Default Value

org.apache.hadoop.io.compress.SnappyCodec

API Name

mapred_map_output_compression_codec

Required

false

Map Tasks Speculative Execution**Description**

If enabled, multiple instances of some map tasks may be executed in parallel.

Related Name

mapreduce.map.speculative

Default Value

false

API Name

mapred_map_tasks_speculative_execution

Required

false

Compress MapReduce Job Output**Description**

Compress the output of MapReduce jobs. Will be part of generated client configuration.

Related Name

mapreduce.output.fileoutputformat.compress

Default Value

false

API Name

mapred_output_compress

Required

false

Compression Codec of MapReduce Job Output

Description

For MapReduce job outputs that are compressed, specify the compression codec to use. Will be part of generated client configuration.

Related Name

mapreduce.output.fileoutputformat.compress.codec

Default Value

org.apache.hadoop.io.compress.DefaultCodec

API Name

mapred_output_compression_codec

Required

false

Compression Type of MapReduce Job Output

Description

For MapReduce job outputs that are compressed as SequenceFiles, you can select one of these compression type options: NONE, RECORD or BLOCK. Cloudera recommends BLOCK. Will be part of generated client configuration.

Related Name

mapreduce.output.fileoutputformat.compress.type

Default Value

BLOCK

API Name

mapred_output_compression_type

Required

false

Default Number of Parallel Transfers During Shuffle

Description

The default number of parallel transfers run by reduce during the copy (shuffle) phase. This number is calculated by the following formula: $\min(\text{number_of_nodes}, n * \min(\text{number_of_cores_per_node}, \text{number_of_spindles_per_node}))$ where the n represents how many streams you want to run per core/spindle. A value of 10 for n is appropriate in most cases. Will be part of generated client configuration.

Related Name

mapreduce.reduce.shuffle.parallelcopies

Default Value

10

API Name

mapred_reduce_parallel_copies

Required

false

Number of Map Tasks to Complete Before Reduce Tasks**Description**

Fraction of the number of map tasks in the job which should be completed before reduce tasks are scheduled for the job.

Related Name

mapreduce.job.reduce.slowstart.completedmaps

Default Value

0.8

API Name

mapred_reduce_slowstart_completed_maps

Required

false

Default Number of Reduce Tasks per Job**Description**

The default number of reduce tasks per job. Will be part of generated client configuration.

Related Name

mapreduce.job.reduces

Default Value

1

API Name

mapred_reduce_tasks

Required

false

Reduce Tasks Speculative Execution**Description**

If enabled, multiple instances of some reduce tasks may be executed in parallel.

Related Name

mapreduce.reduce.speculative

Default Value

false

API Name

mapred_reduce_tasks_speculative_execution

Required

false

Mapreduce Submit Replication

Description

The replication level for submitted job files.

Related Name

mapreduce.client.submit.file.replication

Default Value

10

API Name

mapred_submit_replication

Required

false

Mapreduce Task Timeout

Description

The number of milliseconds before a task will be terminated if it neither reads an input, writes an output, nor updates its status string.

Related Name

mapreduce.task.timeout

Default Value

10 minute(s)

API Name

mapred_task_timeout

Required

false

MR Application Environment

Description

Additional execution environment entries for map and reduce task processes.

Related Name

mapreduce.admin.user.env

Default Value

LD_LIBRARY_PATH=\$HADOOP_COMMON_HOME/lib/native:\$JAVA_LIBRARY_PATH

API Name

mapreduce_admin_user_env

Required

false

Maximum Number of Attempts for MapReduce Jobs

Description

The maximum number of application attempts for MapReduce jobs. The value of this parameter overrides ApplicationMaster Maximum Attempts for MapReduce jobs.

Related Name

mapreduce.am.max-attempts

Default Value

2

API Name

mapreduce_am_max_attempts

Required

false

MR Application Classpath

Description

Classpaths to include for MapReduce applications. During evaluation, the string '{version}' in the value of this parameter will be replaced by the actual MapReduce version.

Related Name

mapreduce.application.classpath

Default Value

\$SHADOOP_CLIENT_CONF_DIR \$PWD/mr-framework/* \$MR2_CLASSPATH

API Name

mapreduce_application_classpath

Required

false

MR Application Framework Path

Description

Path for MapReduce application framework. During evaluation, the string '{version}' in the value of this parameter will be replaced by the actual MapReduce version.

Related Name

mapreduce.application.framework.path

Default Value

/user/yarn/mapreduce/mr-framework/version-mr-framework.tar.gz#mr-framework

API Name

mapreduce_application_framework_path

Required

false

Application Framework

Description

The application framework to run jobs with. If not set, jobs will be run with the local job runner.

Related Name

mapreduce.framework.name

Default Value

yarn

API Name

mapreduce_framework_name

Required

false

ACL For Modifying A Job

Description

Specifies a list of users and/or groups that are allowed to modify job operations. For specifying a list of users and groups the format to use is "user1,user2 group1,group". If set to '*', it allows all users/groups to modify this job. If set to ' '(i.e. space), it allows none. Irrespective of this ACL configuration, (a) job-owner, (b) the user who started the cluster, (c) members of an admin configured supergroup configured via `mapreduce.cluster.permissions.supergroup` and (d) queue administrators of the queue to which this job was submitted to configured via `acl-administer-jobs` for the specific queue in `mapred-queues.xml` can do all the modification operations on a job. Ignored unless `mapreduce.clouster.acls.enabled` is true.

Related Name

`mapreduce.job.acl-modify-job`

Default Value**API Name**

`mapreduce_job_acl_modify_job`

Required

false

ACL For Viewing A Job**Description**

Specifies a list of users and/or groups that are allowed to view private job details. For specifying a list of users and groups the format to use is "user1,user2 group1,group". If set to '*', it allows all users/groups to modify this job. If set to ' '(i.e. space), it allows none. Irrespective of this ACL configuration, (a) job-owner, (b) the user who started the cluster, (c) members of an admin configured supergroup configured via `mapreduce.cluster.permissions.supergroup` and (d) queue administrators of the queue to which this job was submitted to configured via `acl-administer-jobs` for the specific queue in `mapred-queues.xml` can do all the view operations on a job. Ignored unless `mapreduce.cluster.acls.enabled` is true.

Related Name

`mapreduce.job.acl-view-job`

Default Value**API Name**

`mapreduce_job_acl_view_job`

Required

false

Redacted MapReduce Job Properties**Description**

A comma-separated list of job properties to redact in MapReduce.

Related Name

`mapreduce.job.redacted-properties`

Default Value

`fs.s3a.access.key fs.s3a.secret.key fs.adl.oauth2.credential dfs.adls.oauth2.credential fs.azure.account.oauth2.client.secret`

API Name

`mapreduce_job_redacted_properties`

Required

false

JobTracker MetaInfo Maxsize

Description

The maximum permissible size of the split metainfo file. The JobTracker won't attempt to read split metainfo files bigger than the configured value. No limits if set to -1.

Related Name

mapreduce.job.split.metainfo.maxsize

Default Value

10000000

API Name

mapreduce_jobtracker_split_metainfo_maxsize

Required

false

Add add-opens flags to MR containers

Description

On JDK17 it's no longer possible to use the reflection API to access non-public fields and methods add-opens flags should be added to MR AM and map/reduce containers regardless of the user specified java opts. Setting this to true will add the flags to the container launch commands on nodes with JDK17 or higher. Defaults to false, and the setting has no effect on nodes using JDK16 and before.

Related Name

mapreduce.jvm.add-opens-as-default

Default Value

false

API Name

mapreduce_jvm_add_opens_as_default

Required

false

Map Task Java Opts Base

Description

Java opts for the map processes. The following symbol, if present, will be interpolated: @taskid@ is replaced by current TaskID. Any other occurrences of '@' will go unchanged. For example, to enable verbose gc logging to a file named for the taskid in /tmp pass a value of: "-verbose:gc -Xloggc:/tmp/@taskid@.gc". The configuration variable 'Map Task Memory' can be used to control the maximum memory of the map processes.

Related Name

mapreduce.map.java.opts

Default Value

-Djava.net.preferIPv4Stack=true

API Name

mapreduce_map_java_opts

Required

false

Reduce Task Java Opts Base

Description

Java opts for the reduce processes. The following symbol, if present, will be interpolated: @taskid@ is replaced by current TaskID. Any other occurrences of '@' will go unchanged. For example, to enable verbose gc logging to a file named for the taskid in /tmp pass a value of: "-verbose:gc -Xloggc:/tmp/@taskid@.gc". The configuration variable 'Reduce Task Memory' can be used to control the maximum memory of the reduce processes.

Related Name

mapreduce.reduce.java.opts

Default Value

-Djava.net.preferIPv4Stack=true

API Name

mapreduce_reduce_java_opts

Required

false

ApplicationMaster Environment**Description**

Environment variables for the MapReduce ApplicationMaster. These settings can be overridden in the ApplicationMaster User Environment (yarn.app.mapreduce.am.env).

Related Name

yarn.app.mapreduce.am.admin.user.env

Default Value

LD_LIBRARY_PATH=\$HADOOP_COMMON_HOME/lib/native:\$JAVA_LIBRARY_PATH

API Name

yarn_app_mapreduce_am_admin_user_env

Required

false

ApplicationMaster Java Opts Base**Description**

Java command line arguments passed to the MapReduce ApplicationMaster.

Related Name

yarn.app.mapreduce.am.command-opts

Default Value

-Djava.net.preferIPv4Stack=true

API Name

yarn_app_mapreduce_am_command_opts

Required

false

Performance**JHist File Format****Description**

File format the AM will use when generating the .jhist file. Valid values are "json" for text output and "binary" for faster parsing.

Related Name

mapreduce.jobhistory.jhist.format

Default Value

binary

API Name

mapred_jobhistory_jhist_format

Required

false

Enable Optimized Map-side Output Collector**Description**

Whether map tasks should attempt to use the optimized native implementation of the map-side output collector. This can improve performance of many jobs that are shuffle-intensive. Experimental in CDH 5.2.

Related Name**Default Value**

false

API Name

mapreduce_enable_native_map_output_collector

Required

false

Job Counter Groups Limit**Description**

Limit on the number of counter groups allowed per job.

Related Name

mapreduce.job.counters.groups.max

Default Value

50

API Name

mapreduce_job_counter_groups_limit

Required

false

Job Counters Limit**Description**

Limit on the number of counters allowed per job.

Related Name

mapreduce.job.counters.max

Default Value

120

API Name

mapreduce_job_counters_limit

Required

false

Enable Ubertask Optimization

Description

Whether to enable ubertask optimization, which runs "sufficiently small" jobs sequentially within a single JVM. "Small" is defined by the `mapreduce.job.ubertask.maxmaps`, `mapreduce.job.ubertask.maxreduces`, and `mapreduce.job.ubertask.maxbytes` settings.

Related Name

`mapreduce.job.ubertask.enable`

Default Value

false

API Name

`mapreduce_job_ubertask_enabled`

Required

false

Ubertask Maximum Job Size

Description

Threshold for number of input bytes, beyond which a job is considered too big for ubertask optimization. If no value is specified, `dfs.block.size` is used as a default.

Related Name

`mapreduce.job.ubertask.maxbytes`

Default Value**API Name**

`mapreduce_job_ubertask_maxbytes`

Required

false

Ubertask Maximum Maps

Description

Threshold for number of maps, beyond which a job is considered too big for ubertask optimization.

Related Name

`mapreduce.job.ubertask.maxmaps`

Default Value

9

API Name

`mapreduce_job_ubertask_maxmaps`

Required

false

Ubertask Maximum Reduces

Description

Threshold for number of reduces, beyond which a job is considered too big for ubertask optimization. Note: As of CDH 5, MR2 does not support more than one reduce in an ubertask. (Zero is valid.)

Related Name

`mapreduce.job.ubertask.maxreduces`

Default Value

1

API Name

mapreduce_job_ubertask_maxreduces

Required

false

Resource Management**Client Java Heap Size in Bytes****Description**

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

825955249 B

API Name

mapreduce_client_java_heapsize

Required

false

Heap to Container Size Ratio**Description**

The ratio of heap size to container size for both map and reduce tasks. The heap should be smaller than the container size to allow for some overhead of the JVM.

Related Name

mapreduce.job.heap.memory-mb.ratio

Default Value

0.8

API Name

mapreduce_job_heap_memory_mb_ratio

Required

false

Map Task CPU Virtual Cores**Description**

The number of virtual CPU cores allocated for each map task of a job. This parameter has no effect prior to CDH 4.4.

Related Name

mapreduce.map.cpu.vcores

Default Value

1

API Name

mapreduce_map_cpu_vcores

Required

false

Map Task Maximum Heap Size

Description

The maximum Java heap size, in bytes, of the map processes. This number will be formatted and concatenated with 'Map Task Java Opts Base' to pass to Hadoop.

Related Name**Default Value**

0 B

API Name

mapreduce_map_java_opts_max_heap

Required

false

Map Task Memory

Description

The amount of physical memory, in MiB, allocated for each map task of a job. For versions before CDH 5.5, if not specified, by default it is set to 1024. For CDH 5.5 and higher, a value less than 128 is not supported but if it is specified as 0, the amount of physical memory to request is inferred from Map Task Maximum Heap Size and Heap to Container Size Ratio. If Map Task Maximum Heap Size is not specified, by default the amount of physical memory to request is set to 1024.

Related Name

mapreduce.map.memory.mb

Default Value

0 B

API Name

mapreduce_map_memory_mb

Required

false

Reduce Task CPU Virtual Cores

Description

The number of virtual CPU cores for each reduce task of a job.

Related Name

mapreduce.reduce.cpu.vcores

Default Value

1

API Name

mapreduce_reduce_cpu_vcores

Required

false

Reduce Task Maximum Heap Size

Description

The maximum Java heap size, in bytes, of the reduce processes. This number will be formatted and concatenated with 'Reduce Task Java Opts Base' to pass to Hadoop.

Related Name

Default Value

0 B

API Name

mapreduce_reduce_java_opts_max_heap

Required

false

Reduce Task Memory**Description**

The amount of physical memory, in MiB, allocated for each reduce task of a job. For versions before CDH 5.5, if not specified, by default it is set to 1024. For CDH 5.5 and higher, a value less than 128 is not supported but if it is specified as 0, the amount of physical memory to request is inferred from Reduce Task Maximum Heap Size and Heap to Container Size Ratio. If Reduce Task Maximum Heap Size is not specified, by default the amount of physical memory to request is set to 1024. This parameter has no effect prior to CDH 4.4.

Related Name

mapreduce.reduce.memory.mb

Default Value

0 B

API Name

mapreduce_reduce_memory_mb

Required

false

ApplicationMaster Java Maximum Heap Size**Description**

The maximum heap size, in bytes, of the Java MapReduce ApplicationMaster. This number will be formatted and concatenated with 'ApplicationMaster Java Opts Base' to pass to Hadoop.

Related Name**Default Value**

825955249 B

API Name

yarn_app_mapreduce_am_max_heap

Required

false

ApplicationMaster Virtual CPU Cores**Description**

The virtual CPU cores requirement, for the ApplicationMaster. This parameter has no effect prior to CDH 4.4.

Related Name

yarn.app.mapreduce.am.resource.cpu-vcores

Default Value

1

API Name

yarn_app_mapreduce_am_resource_cpu_vcores

Required

false

ApplicationMaster Memory**Description**

The physical memory requirement, in MiB, for the ApplicationMaster.

Related Name

yarn.app.mapreduce.am.resource.mb

Default Value

1 GiB

API Name

yarn_app_mapreduce_am_resource_mb

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Running Job History Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Running Job History Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_job_history_dir

Required

true

Suppress Parameter Validation: I/O Sort Factor**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the I/O Sort Factor parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_io_sort_factor

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Compression Codec of MapReduce Map Output**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Compression Codec of MapReduce Map Output parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapred_map_output_compression_codec

Required

true

Suppress Parameter Validation: Compression Codec of MapReduce Job Output

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Compression Codec of MapReduce Job Output parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapred_output_compression_codec

Required

true

Suppress Parameter Validation: MR Application Environment

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the MR Application Environment parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_admin_user_env

Required

true

Suppress Parameter Validation: Maximum Number of Attempts for MapReduce Jobs

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Number of Attempts for MapReduce Jobs parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_am_max_attempts

Required

true

Suppress Parameter Validation: MR Application Classpath

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the MR Application Classpath parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_mapreduce_application_classpath`**Required**

true

Suppress Parameter Validation: MR Application Framework Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MR Application Framework Path parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_mapreduce_application_framework_path`**Required**

true

Suppress Parameter Validation: MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_mapreduce_client_config_safety_valve`**Required**

true

Suppress Parameter Validation: Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_mapreduce_client_env_safety_valve`**Required**

true

Suppress Parameter Validation: Client Java Configuration Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Client Java Configuration Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_client_java_opts

Required

true

Suppress Parameter Validation: ACL For Modifying A Job**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ACL For Modifying A Job parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_job_acl_modify_job

Required

true

Suppress Parameter Validation: ACL For Viewing A Job**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ACL For Viewing A Job parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_job_acl_view_job

Required

true

Suppress Parameter Validation: Redacted MapReduce Job Properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Redacted MapReduce Job Properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_job_redacted_properties

Required

true

Suppress Parameter Validation: Map Task Java Opts Base

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Map Task Java Opts Base parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_map_java_opts

Required

true

Suppress Configuration Validator: Map Task Maximum Heap Size Validator

Description

Whether to suppress configuration warnings produced by the Map Task Maximum Heap Size Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_map_java_opts_max_heap_mapreduce_map_memory_mb_validator

Required

Required

true

Suppress Parameter Validation: YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_yarn_client_config_safety_valve

Required

true

JobHistory Server

Advanced

Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)

Description

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into hadoop-metrics2.properties.

Related Name

Default Value

API Name

hadoop_metrics2_safety_valve

Required

false

System Group

Description

The group that the JobHistory Server process should run as.

Related Name

Default Value

hadoop

API Name

history_process_groupname

Required

true

System User

Description

The user that the JobHistory Server process should run as.

Related Name

Default Value

mapred

API Name

history_process_username

Required

true

JobHistory Server Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

Description

For advanced use only. A string to be inserted into yarn-site.xml for this role only.

Related Name

Default Value

API Name

jobhistory_config_safety_valve

Required

false

JobHistory Server Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

Description

For advanced use only. A string to be inserted into mapred-site.xml for this role only.

Related Name

Default Value

API Name

jobhistory_mapred_safety_valve

Required

false

JobHistory Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

JOBHISTORY_role_env_safety_valve

Required

false

JobHistory Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Java Configuration Options for JobHistory Server**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS -Dlibrary.leveldbjni.path=CMF_CONF_DIR

API Name

mr2_jobhistory_java_opts

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among

multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

JobHistory Server Logging Threshold

Description

The minimum log level for JobHistory Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

JobHistory Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for JobHistory Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

JobHistory Server Max Log Size

Description

The maximum size, in megabytes, per log file for JobHistory Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

JobHistory Server Log Directory

Description

Directory where JobHistory Server will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hadoop-mapreduce

API Name

mr2_jobhistory_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files

Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .* , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more

details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

MapReduce JobHistory Server Port

Description

The port of the MapReduce JobHistory Server. Together with the hostname of the JobHistory role, forms the address.

Related Name

mapreduce.jobhistory.address

Default Value

10020

API Name

mapreduce_jobhistory_address

Required

false

MapReduce JobHistory Server Admin Interface Port

Description

The port of the MapReduce JobHistory Server administrative interface. Together with the host name of the JobHistory role forms the address.

Related Name

mapreduce.jobhistory.admin.address

Default Value

10033

API Name

mapreduce_jobhistory_admin_address

Required

false

MapReduce JobHistory Web Application HTTP Port**Description**

The HTTP port of the MapReduce JobHistory Server web application. Together with the host name of the JobHistory role forms the address.

Related Name

mapreduce.jobhistory.webapp.address

Default Value

19888

API Name

mapreduce_jobhistory_webapp_address

Required

false

MapReduce JobHistory Web Application HTTPS Port (TLS/SSL)**Description**

The HTTPS port of the MapReduce JobHistory Server web application. Together with the host name of the JobHistory role forms the address.

Related Name

mapreduce.jobhistory.webapp.https.address

Default Value

19890

API Name

mapreduce_jobhistory_webapp_https_address

Required

false

Bind JobHistory Server to Wildcard Address**Description**

If enabled, the JobHistory Server binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name**Default Value**

false

API Name

yarn_jobhistory_bind_wildcard

Required

false

Resource Management

Java Heap Size of JobHistory Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

mr2_jobhistory_java_heapsize

Required

false

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

Suppress Parameter Validation: JobHistory Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: MapReduce JobHistory Server Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Server Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_mapreduce_jobhistory_address

Required

true

Suppress Parameter Validation: MapReduce JobHistory Server Admin Interface Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Server Admin Interface Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_mapreduce_jobhistory_admin_address

Required

true

Suppress Parameter Validation: MapReduce JobHistory Web Application HTTP Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Web Application HTTP Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_mapreduce_jobhistory_webapp_address

Required

true

Suppress Parameter Validation: MapReduce JobHistory Web Application HTTPS Port (TLS/SSL)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Web Application HTTPS Port (TLS/SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_jobhistory_webapp_https_address

Required

true

Suppress Parameter Validation: Java Configuration Options for JobHistory Server**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for JobHistory Server parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mr2_jobhistory_java_opts

Required

true

Suppress Parameter Validation: JobHistory Server Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mr2_jobhistory_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Service Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: MapReduce ApplicationMaster Staging Root Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce ApplicationMaster Staging Root Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_yarn_app_mapreduce_am_staging_dir

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_file_descriptor

Required

true

Suppress Health Test: GC Duration**Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_gc_duration

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_otelcol_health

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_jobhistory_unexpected_exits

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_web_metric_collection

Required

true

NodeManager**Advanced****Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)****Description**

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into hadoop-metrics2.properties.

Related Name**Default Value****API Name**

hadoop_metrics2_safety_valve

Required

false

CGroups Hierarchy**Description**

Path (rooted in the cgroups hierarchy on the machine) where to place YARN-managed cgroups.

Related Name

yarn.nodemanager.linux-container-executor.cgroups.hierarchy

Default Value

/hadoop-yarn

API Name

linux_container_executor_cgroups_hierarchy

Required

false

NodeManager Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Healthchecker Script Arguments

Description

Comma-separated list of arguments which are to be passed to node health script when it is being launched.

Related Name

yarn.nodemanager.health-checker.script.opts

Default Value**API Name**

mapred_healthchecker_script_args

Required

false

Healthchecker Script Path

Description

Absolute path to the script which is periodically run by the node health monitoring service to determine if the node is healthy or not. If the value of this key is empty or the file does not exist in the location configured here, the node health monitoring service is not started.

Related Name

yarn.nodemanager.health-checker.script.path

Default Value**API Name**

mapred_healthchecker_script_path

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Java Configuration Options for NodeManager**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, `{{JAVA_GC_ARGS}}` will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS -Dlibrary.leveldbjni.path=CMF_CONF_DIR

API Name

node_manager_java_opts

Required

false

NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

For advanced use only. A string to be inserted into yarn-site.xml for this role only.

Related Name**Default Value****API Name**

nodemanager_config_safety_valve

Required

false

Enable Container Launch Debug Information**Description**

Generate additional logs about container launches for e.g. a copy of the launch script and lists the directory contents of the container work dir also following symlinks to a max-depth of 5.

Related Name

yarn.nodemanager.log-container-debug-info.enabled

Default Value

false

API Name

nodemanager_log_container_debug_info_enabled

Required

false

NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml**Description**

For advanced use only. A string to be inserted into mapred-site.xml for this role only.

Related Name**Default Value****API Name**

nodemanager_mapred_safety_valve

Required

false

NodeManager Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

NODEMANAGER_role_env_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name

Default Value

true

API Name

`oom_sigkill_enabled`

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

true

API Name

`process_auto_restart`

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

`process_should_monitor`

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Localized Dir Deletion Delay**Description**

Number of seconds after an application finishes before the NodeManager's DeletionService will delete the application's localized file and log directory. To diagnose YARN application problems, set this property's value large enough (for example, to 600 = 10 minutes) to permit examination of these directories.

Related Name

yarn.nodemanager.delete.debug-delay-sec

Default Value

0

API Name

yarn_nodemanager_delete_debug_delay_sec

Required

false

Disk Health Checker Disk Utilization Watermark Low Threshold Percentage**Description**

The low threshold percentage of disk space used when a bad disk is marked as good. Values can range from 0.0 to 100.0. This applies to yarn.nodemanager.local-dirs and yarn.nodemanager.log-dirs. Note that if its value is more than yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-percentage or not set, it will be set to the same value as yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-percentage.

Related Name

yarn.nodemanager.disk-health-checker.disk-utilization-watermark-low-per-disk-percentage

Default Value

API Name

yarn_nodemanager_disk_health_checker_disk_utilization_watermark_low_per_disk_percentage

Required

false

Disk Health Checker Frequency

Description

Frequency, in milliseconds, of running disk health checker.

Related Name

yarn.nodemanager.disk-health-checker.interval-ms

Default Value

2 minute(s)

API Name

yarn_nodemanager_disk_health_checker_interval_ms

Required

false

Disk Health Checker Max Disk Utilization Percent

Description

The maximum percentage of disk space utilization allowed after which a disk is marked as bad. Values can range from 0.0 to 100.0. If the value is greater than or equal to 100, the NodeManager will check for full disk. This applies to local directories and log directories.

Related Name

yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-percentage

Default Value

90.0 %

API Name

yarn_nodemanager_disk_health_checker_max_disk_utilization_per_disk_percentage

Required

false

Disk Health Checker Minimum Health Disk Space

Description

The minimum space that must be available on a disk for it to be used. This applies to local directories and log directories.

Related Name

yarn.nodemanager.disk-health-checker.min-free-space-per-disk-mb

Default Value

0 B

API Name

yarn_nodemanager_disk_health_checker_min_free_space_per_disk_mb

Required

false

Disk Health Checker Minimum Health Disks Fraction

Description

The minimum fraction of number of disks to be healthy for the NodeManager to launch new containers. This correspond to both local directories and log directories; that is, if there are fewer healthy local directories (or log directories) available, then new containers will not be launched on this node.

Related Name

yarn.nodemanager.disk-health-checker.min-healthy-disks

Default Value

0.25

API Name

yarn_nodemanager_disk_health_checker_min_healthy_disks

Required

false

Docker on YARN

Enable Docker Containers

Description

Specifies if Docker containers in YARN are enabled.

Related Name**Default Value**

false

API Name

docker_on_yarn_enabled

Required

false

Allowed Devices for Docker Containers

Description

Specifies the devices that Docker containers are allowed to mount. By default, no devices are allowed to be mounted.

Related Name

docker.allowed.devices

Default Value**API Name**

yarn_docker_allowed_devices

Required

false

Allowed Read-Only Mounts for Docker Containers

Description

Specifies the directories that Docker containers are allowed to mount in read-only mode. NodeManager Local Directories and Cgroups root are always added to this list. Ensure that any additional default read-only mounts are also added here.

Related Name

`docker.allowed.ro-mounts`**Default Value****API Name**`yarn_docker_allowed_ro_mounts`**Required**`false`**Allowed Read-Write Mounts for Docker Containers****Description**

Specifies the directories that Docker containers are allowed to mount in read-write mode. NodeManager Local Directories and NodeManager Container Log Directories are always added to this list. Ensure that any additional default read-write mounts are also added here.

Related Name`docker.allowed.rw-mounts`**Default Value****API Name**`yarn_docker_allowed_rw_mounts`**Required**`false`**Allowed Volume Drivers for Docker Containers****Description**

Specifies the volume drivers which are allowed to be used with Docker. By default, no volume drivers are allowed.

Related Name`docker.allowed.volume-drivers`**Default Value****API Name**`yarn_docker_allowed_volume_drivers`**Required**`false`**Docker Binary Path****Description**

Specifies the path of the binary in the hosts that is used to launch Docker containers. Its default value is `/usr/bin/docker`.

Related Name`docker.binary`**Default Value**`/usr/bin/docker`**API Name**`yarn_docker_binary`**Required**`false`

Enable No-new-privileges Flag for Docker Containers

Description

Specifies if the no-new-privileges flag for docker run is enabled. The no-new-privileges flag ensures that the process or its children processes do not gain any additional privileges. Set to 'true' to enable.

Related Name

docker.no-new-privileges.enabled

Default Value

false

API Name

yarn_docker_no_new_privileges_enabled

Required

false

Trusted Registries for Docker Containers

Description

Specifies the list of trusted docker registries for running trusted docker containers. By default, no registries are defined.

Related Name

docker.trusted.registries

Default Value**API Name**

yarn_docker_trusted_registries

Required

false

Allowed Docker Container Networks

Description

Specifies the networks that are allowed for Docker containers. Valid values are determined by Docker networks available from the docker network ls command.

Related Name

yarn.nodemanager.runtime.linux.docker.allowed-container-networks

Default Value

host none bridge

API Name

yarn_nodemanager_runtime_linux_docker_allowed_container_networks

Required

false

Docker Capabilities

Description

Specifies the capabilities assigned to Docker containers when they are launched. The values may not be case-sensitive from a docker perspective, but Cloudera recommends to keep them uppercase.

Related Name

yarn.nodemanager.runtime.linux.docker.capabilities

Default Value

CHOWN, DAC_OVERRIDE, FSETID, FOWNER, MKNOD, NET_RAW, SETGID, SETUID, SETFCAP, SETPCAP, NET_BIND_SERVICE, SYS_CHROOT, KILL, AUDIT_WRITE

API Name

yarn_nodemanager_runtime_linux_docker_capabilities

Required

false

Default Docker Container Network**Description**

Specifies which allowed network is used when launching Docker containers but no network is specified in the request. This network must be added to yarn.nodemanager.runtime.linux.docker.allowed-container-networks.

Related Name

yarn.nodemanager.runtime.linux.docker.default-container-network

Default Value

host

API Name

yarn_nodemanager_runtime_linux_docker_default_container_network

Required

false

Default Read-Only Mounts for Docker Containers**Description**
