# Creating the dashboard

## About this task

The following steps use a calendar heat map visual, such as the one described in [Calendar heat maps](#), which is built on the dataset [SFPD Incidents](#).

## Procedure

1. Start a new dashboard by clicking [New Dashboard](#).
2. In the Dashboard Designer, open [SFPD Incidents - Calendar Heat Map](#), built according to the instructions in [Calendar heat maps](#). Ensure that you are using the [SFPD Incidents](#) dataset.  
The visual appears in the dashboard.
3. To edit the visual, click the Pencil icon in the top right corner of the visual.

4. Under Dimensions, select pddistrict and add it to the Filters shelf. Repeat the action with category and date.

## Adding filters to the dashboard

**About this task**

Add the three filters to the dashboard.

**Procedure**

1. In the Dashboard Designer, click the Filters tab on the left.

2. Under Dimensions, click the date field.

This adds a filter to the dashboard. Alternatively, you can also drag the field you want to use as a filter and drop it into the filter bar.

 2003-01-01 - 2014-12-31

SFPD Incidents - Calendar Heat Map

3. Add the other two filters. Under Dimensions, click the category field to add a filter based on that field. Similarly, click the pddistrict field to create the next filter.

## SFPD Incidents Cascading Filters

4. Save the dashboard.

## Configuring filters and enabling cascading filter interaction

### Procedure

1. On the category application filter, click the Gear icon.  
The Settings modal window appears.

- Click the Display Settings tab and select the Allow only one item to be selected at a time option.

The screenshot shows the 'Settings' modal window with the 'Display Settings' tab selected. The 'Allow only one item to be selected at a time' checkbox is checked and highlighted with an orange border. Other options include 'Display a textbox parameter', 'Width of this filter (in px)', 'Allow the user to add values to the filter', 'Select values from a dropdown menu', 'Include an option for 'All'', 'Emit distinct parameters for each selected item', 'Hide filter if no input data', 'Remember previous selections when searching', and 'Apply all changes to a multi-select list at the same time'. 'CANCEL' and 'APPLY' buttons are at the bottom right.

- Switch to the Values tab and enter the value pddistrict,date for Filter Fields.

Note that this matches the fields that are the basis of the other filters.

The screenshot shows the 'Settings' modal window with the 'Values' tab selected. The 'Filter Fields' input field contains the text 'pddistrict, date' and is highlighted with an orange border. Other fields include 'From Base Field', 'Title', and 'Output Parameter', all containing the text 'category'. 'CANCEL' and 'APPLY' buttons are at the bottom right.

- Click APPLY.
- On the pddistrict application filter, click the Gear icon.  
The Settings modal window appears.

- Click the Values tab and enter the value category,date for Filter Fields.

This matches the fields that are the basis of the other filters.

- Click APPLY.
- Save the dashboard.

## Exploring the dashboard filter interaction

### About this task

You can use the cascading filters to determine how the selections interact. Remember that there are 39 possible categories of police incidents, distributed across 10 policing districts.

### Procedure

- Open the dashboard in View mode.
- Use the first application filter, datetime, to limit the date range to the 2010 calendar year. Start on 2010-01-01, end with 2010-12-31.
- Click APPLY.
- In the second filter, category, select the value BAD CHECKS.

In the third filter, pddistrict, you can see that the value for PARK is missing. There are only 9 policing districts available in the filter.

This is the result of filtering based on category BAD CHECK and date range 2010-01-01 through 2010-12-31. The resulting subset of data in the dataset does not include rows where pddistrict equals PARK.

If you select another date range, such as years 2008 through 2014, all 10 districts show up on the pddistrict filter.
