Creating visuals with optional dimensions

Procedure

1. Open a new dashboard.
2. Click New Visual.
3. Select the World Life Expectancy dataset in the Data menu.
4. Select the Table visual type in the Visuals menu.
5. Populate the shelves of the visual:
 - From Dimension, select and move un_region and un_subregion fields onto the Dimension shelf.
 - From Measures, select and move population field onto the Measures shelf.
 - From Dimensions, select and move year field onto the Filters shelf.
 - On the Filters shelf, select year field, choose Pick values from a list, select 2000, and click SAVE.

The screenshot displays the Cloudera Data Visualization interface. On the left, a table visual is shown with the following data:

un_region	un_subregion	sum(population)
Africa	Eastern Africa	223,801,227
Africa	Middle Africa	89,349,833
Africa	Northern Africa	169,171,230
Africa	Southern Africa	51,441,854
Africa	Western Africa	219,135,570
Americas	Caribbean	29,386,764
Americas	Central America	135,554,671
Americas	Northern America	313,282,714
Americas	South America	314,774,534

On the right, the 'VISUALS' panel is visible, showing the configuration for the 'Table' visual type. The 'Dimensions' shelf contains 'un_region' and 'un_subregion'. The 'Measures' shelf contains '# sum(population)'. The 'Filters' shelf contains 'year in (2000)'. The 'Limit' is set to 100. A 'REFRESH VISUAL' button is present at the bottom of the panel.

6. From Dimensions, select and move the country field to the Dimension shelf.
7. On the Dimensions shelf, click country field.

8. In the FIELD PROPERTIES menu, select [] Enter/Edit Expression.

9. In the Enter/Edit Expression modal window, change the text to the following expression: [<<dim:>>]

10. Click VALIDATE & SAVE.
 11. Click REFRESH VISUAL.
 12. Change the name of the visual to Regional Populations.

13. Click SAVE.

Creating filters to control optional dimensions

Before you begin

Before starting this work flow, complete the steps in [Creating visuals with optional dimensions](#) on page 4.

Procedure

1. In the dashboard, click the Filters tab.
2. Click CREATE CUSTOM FILTER.

This creates a new filter in the filter area of the application, and opens the Settings modal window for that filter.

3. Click the Values tab and enter the following:

- Under Title, enter Display Country Details.
- Under Output Parameter, enter dim. Note that this is the parameter from [Creating visuals with optional dimensions](#) on page 4.
- Under Specified values, enter Value: country, and Label: Country.

CANCEL APPLY

4. Switch to the Display Settings tab, select Allow only one item to be selected at a time and then select Include an option for 'All'.
5. Click APPLY.
6. Name and save the dashboard.
7. Switch to dashboard View mode and select World Regional Populations.
8. In the Display Country Details filter, select Country.

The table now has a new column, country.

Creating visuals with optional measures

About this task

You may choose to duplicate the dashboard that you created earlier according to the instructions in [Creating visuals with optional dimensions](#) on page 4. In this case, open the visual, and jump to [Step 6](#) in the following workflow.

Procedure

1. Open a new dashboard.
2. Click New Visual.
3. Select the World Life Expectancy dataset in the Data menu.
4. Select the Table visual type in the Visuals menu.
5. Populate the shelves of the visual:
 - From Dimension, select and move un_region and un_subregion fields to the Dimension shelf.
 - From Measures, select and move population field to the Measures shelf.
 - From Dimensions, select and move year field to the Filters shelf.
 - On the Filters shelf, select year field, choose Pick values from a list, select 2000, and click SAVE.

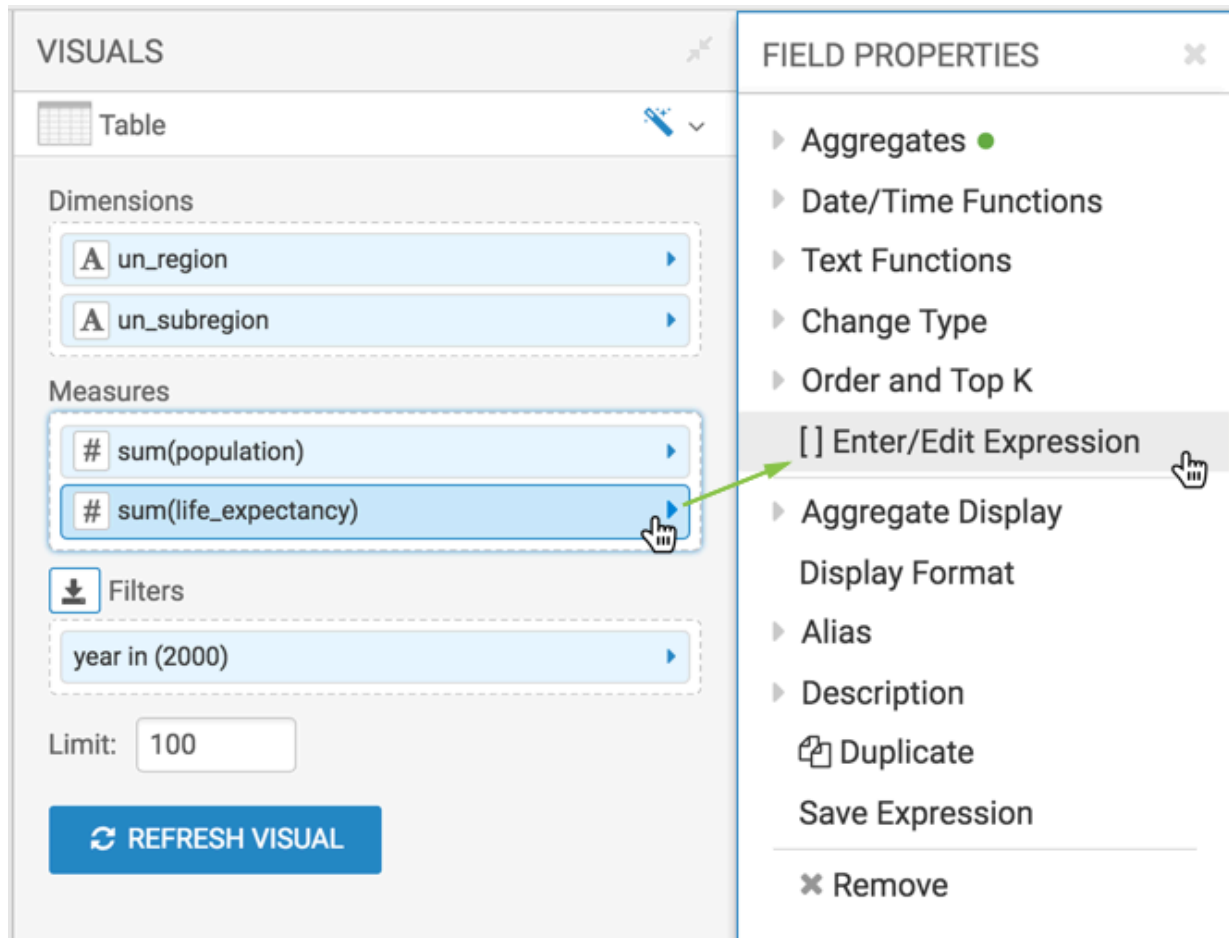

The screenshot displays the Cloudera Data Visualization interface. On the left, a table visual is shown with the following data:

un_region	un_subregion	sum(population)
Africa	Eastern Africa	223,801,227
Africa	Middle Africa	89,349,833
Africa	Northern Africa	169,171,230
Africa	Southern Africa	51,441,854
Africa	Western Africa	219,135,570
Americas	Caribbean	29,386,764
Americas	Central America	135,554,671
Americas	Northern America	313,282,714
Americas	South America	314,774,534

On the right, the 'VISUALS' panel is visible, showing the configuration for the 'Table' visual. The 'Dimensions' shelf contains 'un_region' and 'un_subregion'. The 'Measures' shelf contains '# sum(population)'. The 'Filters' shelf contains 'year in (2000)'. The 'Limit' is set to 100. A 'REFRESH VISUAL' button is at the bottom of the panel.

6. From Measures, select and move the life_expectancy field to the Measures shelf.
7. On the Measures shelf, click the life_expectancy field.

8. In the FIELD PROPERTIES menu, select [] Enter/Edit Expression.

9. In the Enter/Edit Expression modal window, change the text to the following expression: [`<<mes:>>`].
 10. Click VALIDATE & SAVE.

11. Click REFRESH VISUAL.
 12. Change the name of the visual to Regional Populations.

13. Click SAVE.

Creating filters to control optional measures

Before you begin

Before starting this work flow, complete the steps in [Creating visuals with optional measures](#) on page 8.

Procedure

1. In the dashboard, click the Filters tab.
2. Click CREATE CUSTOM FILTER to create a second dashboard filter.

This creates a new filter in the filter area of the application, and opens the Settings modal window for that filter.

3. Click the Values tab and enter the following:

- Under Title, enter Display Measures.
- Under Output Parameter, enter mes. Note that this is the parameter from [Creating visuals with optional measures](#) on page 8.
- Under Specified values, enter the following two rows:
 - Value: life_expectancy, Label: Life Expectancy
 - Value: gdp_per_capita, Label: GDP per Capita

Settings ×

APPLY

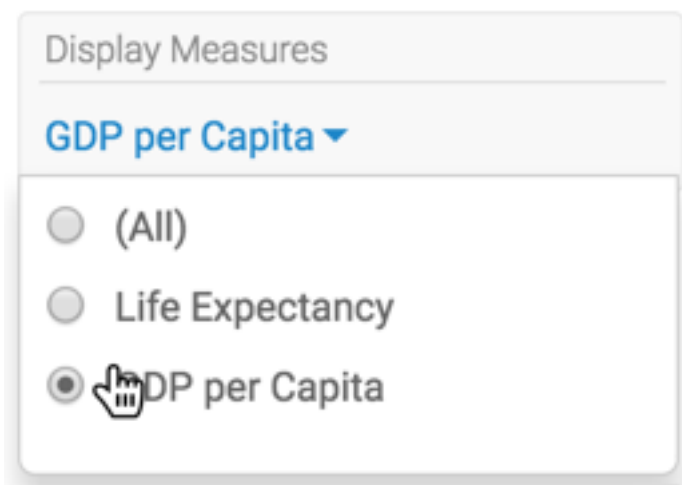

4. In the Settings modal window, switch to the Display Settings tab.
5. Select Allow only one item to be selected at a time
6. Select Include an option for 'All'.
7. Click APPLY.
8. Name and save the dashboard.
9. Switch to application View mode and select World Regional Populations.
10. In the Display Country Details filter, select Country.

11. In the Display Measures filter, select Life Expectancy.

Note that the table now has a new column, `life_expectancy`.

12. To change the measure that appears in the visual, select GDP per Capita in the Display Measures filter.

Note that the additional column is now titled `gdp_per_capita`, not `life_expectancy`.

To check the parameters of the dashboard, hover the pointer over the Filter icon at the top right corner. They are:

- `dim: country`
- `dim.alias: Country`
- `mes: gdp_per_capita`

You can scroll down to see the `mes.alias: GDP per Capita` parameter.

13. You can easily navigate between the permutations of filter outputs you create by using filter navigation controls at the top right corner.

Creating visuals with variable dimensions

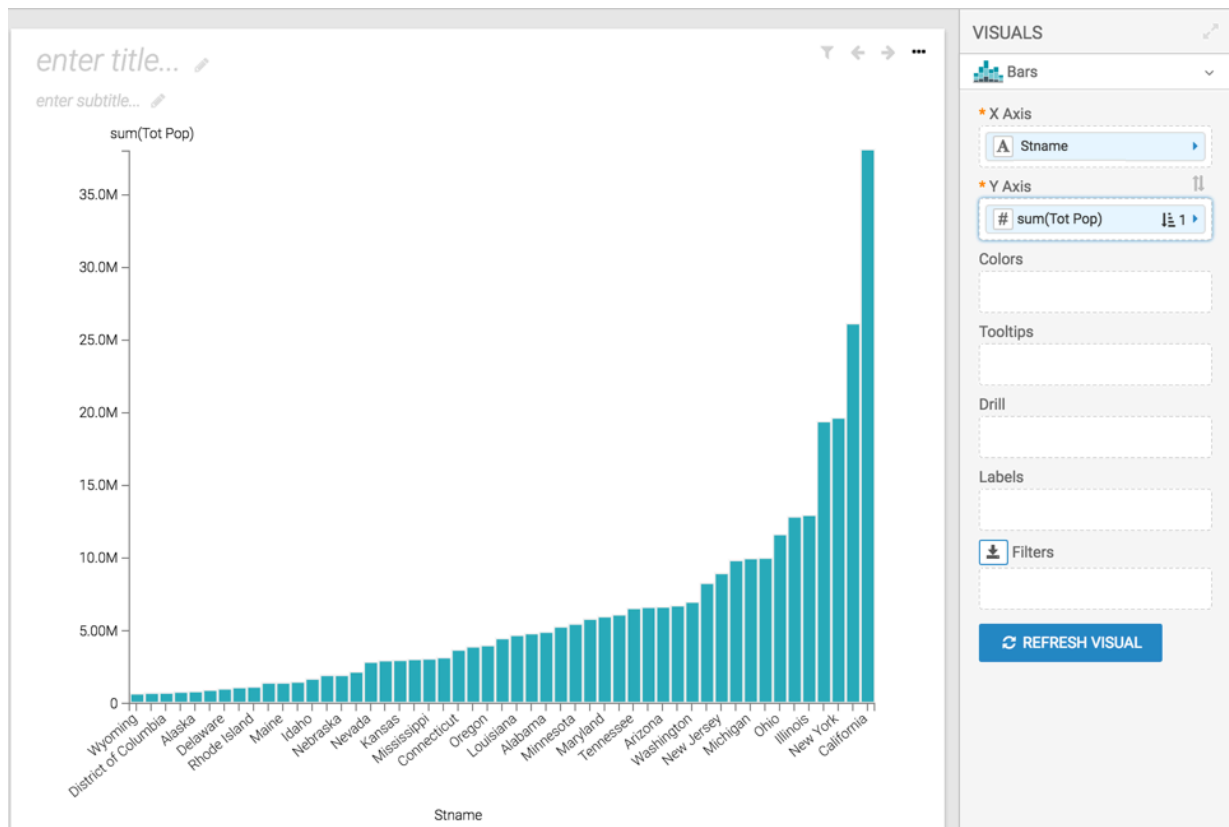

Procedure

1. Open a new dashboard.

2. Click New Visual.
3. Select the US County Population dataset in the Data menu.
4. Select the Bar Chart visual type in the Visuals menu.
5. Populate the shelves of the visual:
 - From Dimension, select and move Sname field to the X Axis shelf.
 - From Measures, select and move Tot Pop field to the Y Axis shelf.
 - On the Y Axis shelf, change the aggregation of the Tot Pop field from sum(Tot Pop) to avg(Tot Pop): select Tot Pop field, chose the Aggregates menu, and change the aggregate from Sum to Average.
 - On the Y Axis shelf, click Tot Pop, and under the FIELD PROPERTIES menu select Order, and choose Ascending.

The screenshot displays the Cloudera Data Visualization interface. On the left, the **VISUALS** panel shows a bar chart visual. The X Axis shelf contains the field **Sname**. The Y Axis shelf contains the field **sum(Tot Pop)**, which is highlighted with a blue border and a hand icon. Below the shelves are sections for Colors, Tooltips, and Drill. On the right, the **FIELD PROPERTIES** panel is open. It lists several categories: Aggregates, Date/Time Functions, Text Functions, Analytic Functions, Change Type, and Order and Top K. The **Order and Top K** category is expanded, showing options for Descending and Ascending. The **Ascending** option is selected, indicated by a green checkmark and a hand icon. Below these options are input fields for Top K (eg. 100) and Bottom K (eg. 100), and a button labeled **[] Enter/Edit Expression**. A green arrow points from the **sum(Tot Pop)** field in the Y Axis shelf to the **Ascending** option in the Field Properties panel.

6. Click REFRESH VISUAL to see the basic set up of the bar chart.

7. On the X Axis shelf, click Sname field.
8. In the FIELD PROPERTIES menu, select [] Enter/Edit Expression.

9. In the Enter/Edit Expression modal window, change the text to the following expression: <<dim:[Sname]>>.

10. Click VALIDATE & SAVE.

Enter/Edit Expression ✕

<<dim:[Stname]>>

SAVE

11. Change the name of the visual to Population by <<dim>>.

To have an informative title for the visual, you may add the parameter placeholders to it. The filter configured in [Creating filters to control variable dimensions](#) on page 15 supplies the required value.

12. Click SAVE.

Creating filters to control variable dimensions

Before you begin

Before starting this work flow, complete the steps in [Creating visuals with variable dimensions](#) on page 12.

Procedure

1. In the dashboard, click the Filters tab.
2. Click CREATE CUSTOM FILTER.

This creates a new filter in the filter area of the application, and opens the Settings modal window for that filter.

3. Switch to the Values tab and enter the following:

- Under Title, enter Dimension Level.
- Under Output Parameter, enter dim. Note that this is the parameter from [Creating visuals with variable dimensions](#) on page 12.
- Under Specified values, enter the following two rows:
 - Value: stname, Label: State
 - Value: ctynome, Label: County

☐ Apply all changes to a multi-select list at the same time ⓘ

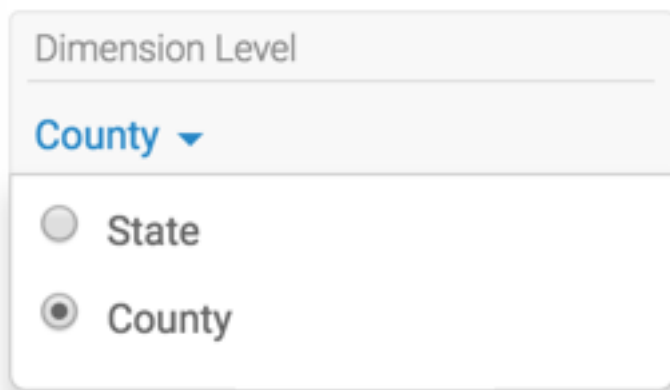

CANCEL APPLY

- Click APPLY.
- Name and save the dashboard.
- Switch to application View mode.

Note that the default choice, Sname, displays both on the horizontal axis, and in the title of the visual.

To check the parameters of the dashboard, hover the pointer over the Filter icon at the top right corner. They are dim: Sname and dim.alias: State.

- In the Dimension Level filter, select County.

Note that now the title of the graph and the axis changed to use Ctyname.

You may also notice that your graph does not appear to have any bars. In this particular dataset, there are large differences among populations of various counties; a great majority has populations under one million, and a select few represent urban areas with extremely dense population.

In the application, scroll to the extreme right of the visual to see the graph.

If you want to check the status of parameters on this dashboard, hover the pointer over the Filter icon at the top right corner, and notice that they changed to dim: Ctyname and dim.alias: County.

Creating visuals with variable measures

About this task

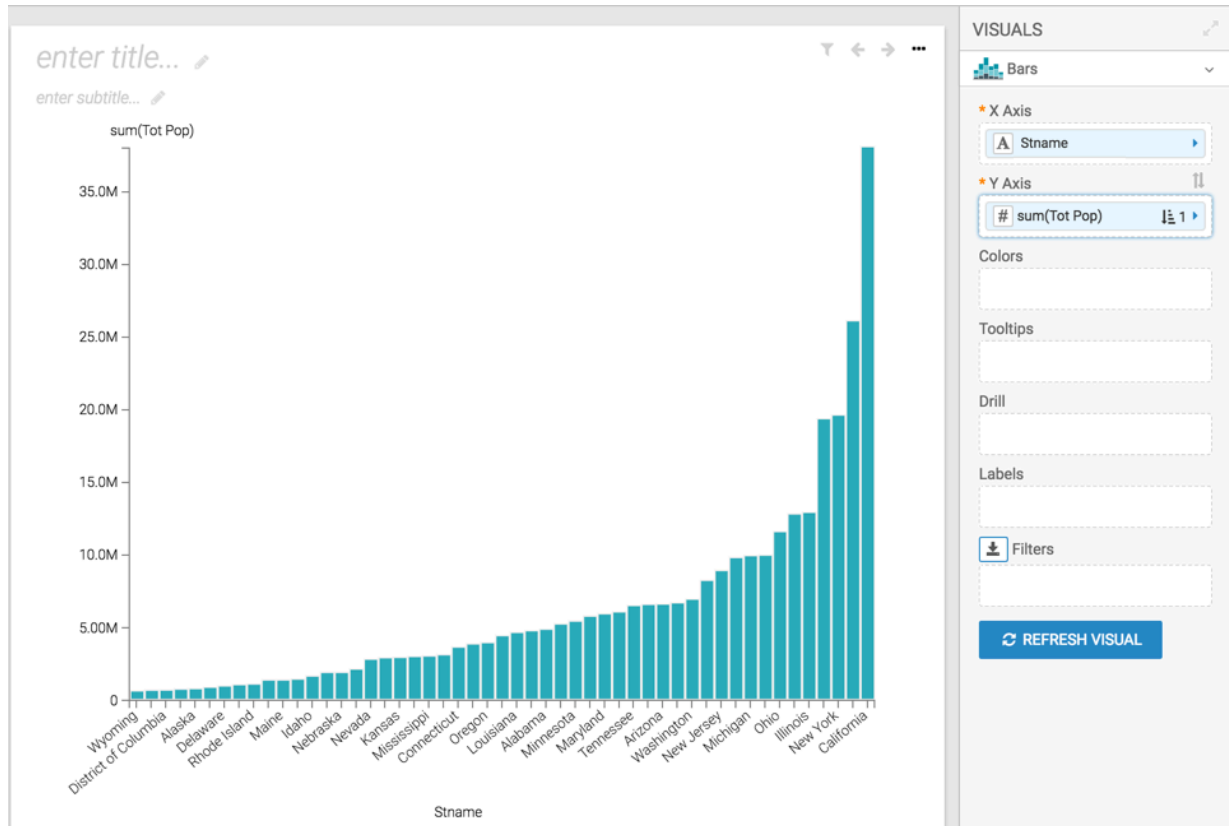

You may choose to duplicate the dashboard that you created earlier according to the instructions in [Creating visuals with variable dimensions](#) on page 12. In this case, open the visual, and jump to [Step 7](#) in this workflow.

Procedure

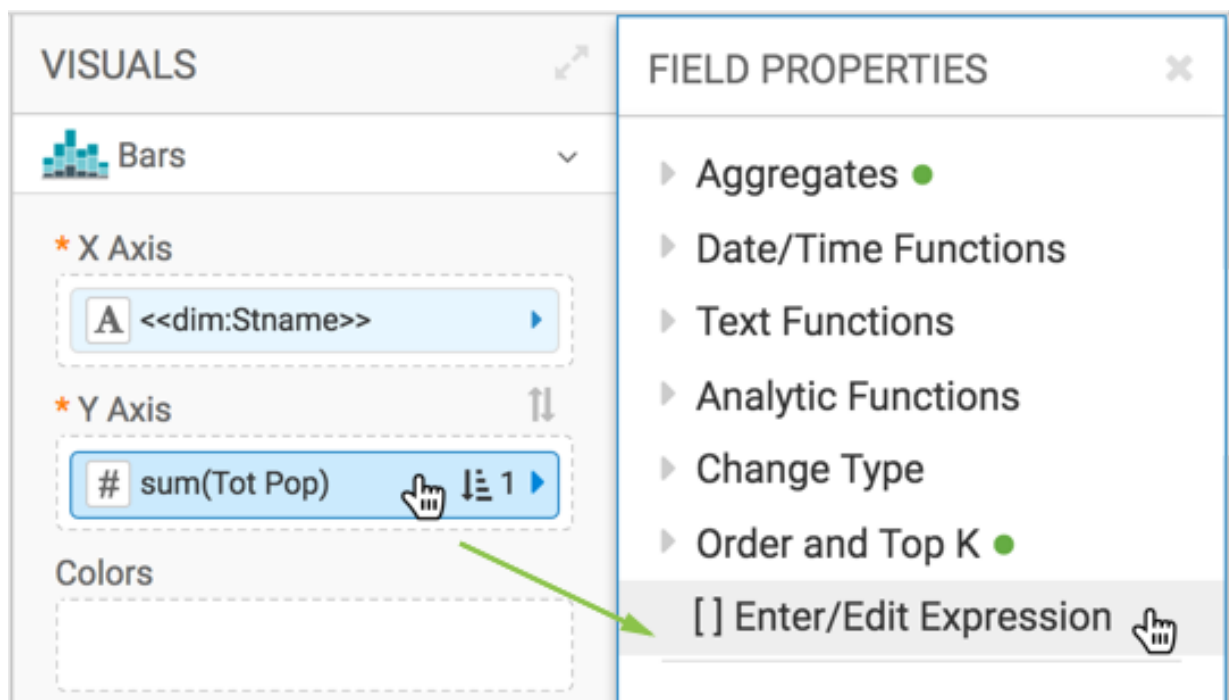

1. In the dashboard, click New Visual.
2. Select the US County Population dataset in the Data menu.
3. Select the Bar Chart visual type in the Visuals menu
4. Populate the shelves of the visual:
 - From Dimension, select and move Sname field to the X Axis shelf.
 - From Measures, select and move Tot Pop field to the Y Axis shelf.
 - On the Y Axis shelf, change the aggregation of the Tot Pop field from sum(Tot Pop) to avg(Tot Pop): select Tot Pop field, chose the Aggregates menu, and change the aggregate from Sum to Average.
 - On the Y Axis shelf, click Tot Pop, and under the FIELD PROPERTIES menu select Order, and choose Ascending.

The screenshot displays the Cloudera Data Visualization interface. On the left, the 'VISUALS' panel shows a Bar Chart visual. The X Axis is labeled 'Sname' and the Y Axis is labeled 'sum(Tot Pop)'. A green arrow points from the 'sum(Tot Pop)' field on the Y Axis to the 'FIELD PROPERTIES' panel on the right. The 'FIELD PROPERTIES' panel shows the 'Order and Top K' section with 'Ascending' selected. The 'Aggregates' section is also visible, showing 'sum(Tot Pop)'.

5. Click REFRESH VISUAL to see the basic set up of the bar chart.

6. On the Y Axis shelf, click the sum(Tot Pop) field.
7. In the FIELD PROPERTIES menu, select [] Enter/Edit Expression.

8. In the Enter/Edit Expression modal window, change the text to the following expression: <<agg:sum([Tot Pop])>>.

Enter/Edit Expression ✕

<<agg:sum([Tot Pop])>>|
