<b>Upgrade and migration paths.....</b>	<b>4</b>
<b>Upgrading to CFM 2.1.7 from CFM 2.1.6.....</b>	<b>7</b>

## Upgrade and migration paths

Cloudera encourages you to run NiFi on Cloudera Data Platform (CDP) so that you can take advantage of the latest updates and features. You can run NiFi on CDP by installing the CFM parcel on top of CDP. You can upgrade or migrate from earlier versions of CFM on CDP Private Cloud Base or from HDF and CFM on CDH. Review the upgrade and migration information to ensure that you are aware of the requirements pertaining to the upgrade or migration scenario appropriate to your use case.

### Upgrade and migration paths overview

#### You are using CFM 2.x on CDP Private Cloud Base

If you are using CFM 2.x on CDP Private Cloud Base 7.1.1-7.1.9, and you want to upgrade to a higher version of CFM, there are specific upgrade paths that you need to take. Review them in the [Upgrade and migration paths diagram](#) and see the procedure steps in the following table:

**Table 1: Upgrade procedure from CFM 2.x**

	Upgrade
Step 1.	Upgrade CFM to 2.0.4 if you are using CFM 2.0.1
Step 2.	Upgrade CDP Private Cloud Base to 7.1.7, 7.1.7 SP1, or 7.1.7 SP2
Step 3.	<p>Check the <a href="#">Upgrade and migration paths diagram</a> to identify the sequence of intermediate upgrades required to transition from your current CFM version to the desired one.</p> <p>Upgrade to CFM 2.1.5 from lower CFM 2.x versions</p> <p>Upgrade to CFM 2.1.6 from CFM 2.1.5</p> <p>Upgrade to CFM 2.1.7 from CFM 2.1.6</p>
Step 4.	Upgrade CDP Private Cloud Base to 7.1.8 or 7.1.9

**Note:** CFM 2.1.1 is also supported on CDP Private Cloud Base 7.1.6.

### You are using CFM 1.x on CDH

If you are using CFM 1.x on CDH 5 or CDH 6, or as standalone CFM, and you want to upgrade to a higher version of CFM, there are specific upgrade paths that you can take. Compare the different upgrade options in the [Upgrade and migration paths diagram](#) and see both migration and upgrade processes in the following table:

**Table 2: Upgrade procedure options from CFM 1.x**

Migration			Upgrade from CFM 1.x on CDH 6		Upgrade from CFM 1.x on CDH 5		Upgrade from standalone CFM 1.x	
Step 1.	Upgrade from CFM 1.0.0 to CFM 1.1.0	Upgrade from CFM 1.0.1 to CFM 1.1.0	Upgrade from CFM 1.0.0 to CFM 1.1.0	Upgrade from CFM 1.0.1 to CFM 1.1.0	Upgrade from CFM 1.0.0 to CFM 1.1.0	Upgrade from CFM 1.0.1 to CFM 1.1.0	Upgrade from CFM 1.0.0 to CFM 1.1.0	Upgrade from CFM 1.0.1 to CFM 1.1.0
Step 2.	Install CFM 2.x on CDP Private Cloud Base 7.1.1 - 7.1.8  <b>Note:</b> The highest possible CFM version in a migration scenario is 2.1.5.		Upgrade from CDH 6 to CDP Private Cloud Base 7.1.7, 7.1.7 SP1 or 7.1.7 SP2		Upgrade from CDH/CM 5.0-5.12 to CDH/CM 5.13 or higher.  See also the <a href="#">Cloudera Enterprise Upgrade Guide</a> .		Upgrade from CFM 1.1.0 to CFM 2.x  <b>Note:</b> In-place upgrade from CFM 1.x to CFM 2.1.6 and 2.1.7 is not supported, so the highest possible CFM version in upgrade scenario is 2.1.5.	
Step 3.	Migrate data from CFM 1.x to CFM 2.x		Upgrade from CFM 1.1.0 to CFM 2.x  <b>Note:</b> In-place upgrade from CFM 1.x to CFM 2.1.6 and 2.1.7 is not supported, so the highest possible CFM version in this upgrade scenario is 2.1.5.		Upgrade from CDH 5.13 or higher to CDP Private Cloud Base 7.1.1 or 7.1.7  <b>Note:</b> The supported CDP PvC Base versions are 7.1.1 – 7.1.7.			
Step 4.					Upgrade from CFM 1.1.0 to CFM 2.x  <b>Note:</b> In-place upgrade from CFM 1.x to CFM 2.1.6 and 2.1.7 is not supported, so the highest possible CFM version in upgrade scenario is 2.1.5.			

For an explanation on the differences between upgrade and migration, see [CFM upgrade and migration options](#).

## You are using HDF

If you are using HDF and you want to upgrade to CFM, there are specific upgrade paths that you can take. Compare the different upgrade options in the [Upgrade and migration paths diagram](#) and see both migration and in-place upgrade processes in the following table:

**Table 3: Upgrade procedure options from HDF**

	Migration	In-place upgrade
Step 1.	Upgrade HDF to 3.5.x. See also the <a href="#">HDF 3.5.2 Release Notes</a> .	Upgrade HDF to 3.5.2. See also the <a href="#">HDF 3.5.2 Release Notes</a> .
Step 2.	Install CFM 2.x on CDP Private Cloud Base 7.1.1 - 7.1.8  <b>Note:</b> The highest possible CFM version in a migration scenario is 2.1.5.	<ul style="list-style-type: none"> <li>In-place upgrade from HDF 3.5.2 to CFM 2.1.1 on CDP 7.1.6</li> <li>In-place upgrade from HDF 3.5.2 to CFM 2.x on CDP 7.1.7</li> </ul>
Step 3.	Migrate data from HDF to CFM	 <b>Note:</b> The highest possible CFM version in this upgrade scenario is 2.1.5.

For an explanation on the differences between in-place upgrade and migration, see [CFM upgrade and migration options](#).

**Note:** Cloudera recommends migration over in-place upgrade.

## CFM upgrade and migration options

There are three methods to change from an older version to CFM 2.x.

### Upgrade

Upgrade refers to a full upgrade of CFM on CDP Private Cloud Base without the need of having to migrate data between clusters.

Possible paths:

- CFM 1.1.0 CFM 2.x
- CFM 2.x higher CFM 2.x versions

For detailed information on performing a CFM to CFM upgrade, see:

- [Upgrading to CFM 2.1.7 from CFM 2.1.6](#)
- [Upgrading to CFM 2.1.6 from CFM 2.1.5](#)
- [Upgrading from lower CFM 2.x versions to CFM 2.1.5](#)
- [Upgrading from CFM 1.1.0 on CDH to CFM 2.1.5 on CDP](#)

### Migration

Data migration refers to moving existing HDF or CFM 1.x cluster workloads to a new installation of CDP Private Cloud Base. You can move your NiFi dataflows and NiFi Registry versioned flows from an HDF 3.5.x or CFM 1.1.0 (standalone, or on CDH 5 or CDH 6) cluster to a CFM 2.x cluster on CDP Private Cloud Base. It requires that you have both your HDF or CFM 1.1.0 clusters and a CFM 2.x cluster running at the same time. Cloudera recommends migration over in-place upgrade.

Possible paths:

- HDF 3.5.x CFM 2.x
- CFM 1.1.0 CFM 2.x

**Note:** The highest possible CFM version in a migration scenario is 2.1.5.

For detailed information on performing migration, see [Migration from HDF 3.5.x or CFM 1.1.0 to CFM 2.x on CDP](#).

### In-place upgrade

This option enables you to install Cloudera Manager when using HDF and allows Cloudera Manager to take over the management of your services. You can convert your existing Ambari blueprint to a Cloudera Manager Deployment template using the AM2CM tool. Cloudera recommends migration over in-place upgrade. If you have a version of HDF lower than 3.5.2.0, first upgrade to HDF 3.5.2.0 and then upgrade HDF to CFM 2.1.1-2.1.4 on CDP Private Cloud Base 7.1.6 or 7.1.7.

Possible paths:

- HDF 3.5.2.0 CFM 2.1.1 on CDP 7.1.6
- HDF 3.5.2.0 CFM 2.1.1-2.1.5 on CDP 7.1.7

For detailed information on performing an in-place upgrade, see:

- [In-place upgrade from HDF 3.5.2 to CFM 2.1.1 on CDP](#)
- [In-place upgrade from HDF 3.5.2 to CFM 2.x on CDP](#)

**Note:** The highest possible CFM version in this upgrade scenario is 2.1.5.

## Upgrading to CFM 2.1.7 from CFM 2.1.6

This guide outlines the prerequisites and steps for upgrading from Cloudera Flow Management (CFM) 2.1.6 to CFM 2.1.7. If you want to upgrade from other CFM 2.x versions, check the available upgrade paths in [Upgrade and migration paths](#) diagram to identify the sequence of intermediate upgrades required to transition from your current CFM version to CFM 2.1.7.

### Before you begin

- Review the possible upgrade paths.

Before starting your CFM upgrade, it is crucial that you review the available upgrade paths to ensure that you are performing the right upgrade for your use case.

If you want to use CFM 2.1.7, you have the following options:

- Upgrade from CFM 2.1.6 on CDP 7.1.7 to CFM 2.1.7 on CDP 7.1.7
- Upgrade from CFM 2.1.6 on CDP 7.1.8 to CFM 2.1.7 on CDP 7.1.8
- Upgrade from CFM 2.1.7 on CDP 7.1.7 to CFM 2.1.7 on CDP 7.1.8
- Upgrade from CFM 2.1.7 on CDP 7.1.8 to CFM 2.1.7 on CDP 7.1.9

**Important:** In-place upgrades from CFM 1.x and in-place upgrades from HDF with AM2CM are not supported.

For an overview of all available paths, see [Upgrade and migration paths](#).

- Upgrade Cloudera Manager and CDP Private Cloud Base, if needed.

**Important:**

CFM 2.1.7 requires at least CDP 7.1.7.

### About this task

To upgrade to CFM 2.1.7.1000 from an earlier version of CFM on CDP Private Cloud Base, you must stop the CFM services, update the CSD files, restart the SCM Server, activate the new CFM parcel, and then restart your CFM services.

### Procedure

1. Stop the NiFi and NiFi Registry services, in this order.
2. Delete the old CSD files.
3. Download the new CSD files.

The default CSD location is `/opt/cloudera/csd`, but you can configure that location from Cloudera Manager Administration | Settings | Local Descriptor Repository Path.

Ensure that you maintain the appropriate file ownership and access attributes and SELinux permissions if needed.

4. Download the new CFM parcel and .sha checksums file appropriate for your operating system.

The default parcel location is `/opt/cloudera/parcel-repo/`.

Ensure that you maintain the appropriate file ownership and access attributes and SELinux permissions if needed.

5. Restart the `cloudera-scm-server` service:

```
service cloudera-scm-server restart
```

6. In Cloudera Manager, from the **Parcels** page, distribute and activate the CFM 2.1.7.1000 parcel.  
After clicking Activate, the Activate CFM <version> on <cluster-name> pop-up displays. Click Activate Only, and then OK.
7. Restart Cloudera Management Service.
8. Restart NiFi and NiFi Registry and deploy the client configurations.
9. Optionally, to clean up, remove the previous parcels from the host.
  - a) From the Parcel menu, go to the older CFM parcel.
  - b) Select Remove From Host.
  - c) Select Delete.
10. From the Ranger UI, NiFi service controller policy:
  - a) Add the `nifi` user to the policy with READ permissions.
  - b) Verify the `nifi` group is set in the policy.
